NARRATIVE

OF THE

UNITED STATES' EXPEDITION

TO

THE RIVER JORDAN

AND THE

DEAD SEA,

BY

W. F. LYNCH, U. S. N.,

COMMANDER OF THE EXPEDITION,

WITH

A MAP FROM ACCURATE SURVEYS.

A NEW AND CONDENSED EDITION.

PHILADELPHIA:

LEA AND BLANCHARD.

1850.

DS106
L8

58182

Entered, according to the Act of Congress, in the year 1850, by

LEA AND BLANCHARD,

in the Clerk's Office of the District Court of the United States for the Eastern District of Pennsylvania.

STEREOTYPED BY J. FAGAN.

PRINTED BY T. K. AND P. G. COLLINS.

THIS CONDENSED NARRATIVE

Is Dedicated

PREFACE.

In the Preface to the large and illustrated edition of this work, it is stated that "The object of the Expedition, the narrative of which is here presented, was unknown to the public, until a very short time prior to its departure from the United States, when the indications were such as to induce me to apprehend that it was not appreciated. Nevertheless, I had an abiding faith in the ultimate issue, which cheered me on; for I felt that a liberal and enlightened community would not long condemn an attempt to explore a distant river, and its wondrous reservoir,—the first, teeming with sacred associations, and the last, enveloped in a mystery, which had defied all previous attempts to penetrate it.

"As soon as possible after our return, I handed in my official report, and, at the same time, asked permission to publish a narrative or diary, of course embracing much, necessarily elicited by visiting such interesting scenes, that would be unfit for an official paper. The permission asked, was granted by the Hon. J. Y. Mason, Secretary of the Navy, with the remark, 'I give this assent with the more pleasure, because I do not think that you should be anticipated by any other, who had not the responsibility of the enterprise.'"

In presenting the illustrated edition to the public, I wished to render an exact account of all incidents that befel and observations that were made, in a style and execution commensurate with the character of the Government which sanctioned it. This object having been effected, I now carry out the further design of extending a knowledge of the results by issuing this

cheaper, and condensed edition. The reading matter is nearly the same, from the landing of the Expedition in Syria until its return to the United States.

The Map has been carefully and accurately reduced from the larger one prepared for and published by the Government, and will be found to contain the more important details set forth in the two which accompanied the former edition.

In preparing my first publication, I studiously avoided the appearance of endeavouring to manufacture opinions for others. In response, however, to many calls that have been made upon me, as to my opinion,—that the Jordan originally ran through the vale of Siddim, before the latter was submerged, I have no hesitation in giving the reasons upon which it is based.

From the pits of bitumen within sight of the highest perennial source of the Jordan, to the Salt Mountain of Usdum, at the south-west extremity of the Dead Sea, there is a continued chain of volcanic characters. Black basalt prevails from beyond the head of Lake Tiberias far down the Jordan; and the north-eastern and north-western shores of the Dead Sea, present respectively tufa and a black bituminous limestone, which inflames and is fœtid when exposed to the fire; while sulphur and naphtha are also found upon its shores.

Thermal springs prevail upon the shores of the Sea of Galilee, the Jordan, and the Dead Sea. The whole region has been convulsed by earthquakes, and the one, which in 1837 nearly destroyed the towns of Safed and Tiberias, dislodged a huge mass of bitumen from the depths of the last-named sea.

South of the Dead Sea, volcanic characters are also exhibited. Burckhardt saw volcanic rocks on the *eastern* base of Mount Sinai, and the traces are those of *primary* volcanic action.

Our soundings ascertained the bottom of the Dead Sea to consist of two plains, an elevated and a depressed one—averaging, the former 13, and the latter 1300 feet, below the surface. Through the northern, and largest and deepest one, is

a ravine, which seems to correspond with the bed of the Jordan to the north, and the Wady el Jeib, or ravine within a ravine, at the south end of the Sea.

Between the River Jabok (a tributary of the Jordan,) and the Dead Sea, we unexpectedly encountered a sudden break-down in the bed of the last named river, and according to the account of a distinguished eastern traveller there is a similar break in the water-courses to the south of the Sea.

As stated in the narrative too, the conviction was forced upon me, that the mountains which hem in the Dead Sea are older than the Sea itself—for, had their relative ages been the same at first, the torrents which pour into the Sea would have worn their beds in a gradual and correlative slope; whereas, in the northern section, where a soft, bituminous limestone prevails, they plunge down several hundred feet, while on both sides of the southern portion, the ravines come down without abruptness, although the head of Wady Kerak, at the south-east border of the Sea, is more than 1000 feet higher than Wady Ghuweir on its north-west shore.

Lake Tiberias is 312 feet; the Dead Sea 1316 feet, and the Red Sea (computed by Laborde) 75 feet below the level of the Mediterranean. *As an elevation of the whole Ghor, preserving those exact proportions, would carry its waters into the Southern Ocean*, I cannot resist the inference that, by a general convulsion, the whole valley has sunk down, with the greatest depression abreast of Wady Ghuweir; and that the streams which formerly ran through to the Red Sea, were thereby debarred an outlet and submerged the plain, the cities of which, from the abundance of bitumen that prevailed, were most probably the theatre of a preceding conflagration.

March, 1850.

LIST

OF THE

MEMBERS OF THE EXPEDITION.

W. F. Lynch, Lieutenant-Commanding.
John B. Dale, Lieutenant.
R. Aulick, Passed-Midshipman.
Francis E. Lynch, Charge of Herbarium.
Joseph C. Thomas, Master's Mate.
George Overstock, Seaman.
Francis Williams, "
Charles Homer, "
Hugh Read, "
John Robinson, "
Gilbert Lee, "
George Lockwood, "
Charles Albertson, "
Henry Loveland, "

Henry Bedlow, Esq., and Henry J. Anderson, M. D., were associated with the Expedition as volunteers, after its original organization, — the first at Constantinople, and the other at Beïrût. More zealous, efficient, and honourable associates could not have been desired. They were ever in the right place, bearing their full share of watching and privation. In separating from Dr. Anderson, at Jerusalem, we felt that we were parting from a tried and sterling friend. To the skill of Mr. Bedlow, the wounded seaman was indebted for the preservation of his life; and words are inadequate to express how, in sickness, forgetful of himself, he devoted all his efforts to the relief of his sick companions. His notes were of great service to me, and contributed very much to the value of the work.

CONTENTS.

CHAPTER I.

INTRODUCTION.

PAGE

APPLICATION to the Navy Department—Favourable result—Vessel designated—Preparations—Metallic boats—Selection of men—Officers—Orders for departure—Instructions for the Expedition—Detention of the ship—Time employed in various preparations—Water-bags—Boats, and the means of their transportation 25

CHAPTER II.

FROM NEW YORK TO PORT MAHON.

Sail from New York—Pleasing anticipations—The Azores—Trafalgar—View of Gibraltar—Port Mahon 27

CHAPTER III.

FROM PORT MAHON TO SMYRNA.

Departure from Mahon—Arrival at Valetta—Leave Malta—Enter the Egean Sea—View of the shores of Greece—Reflections—Smyrna—Oriental scenes—Aspect of Smyrna—Environs of Smyrna 32

CHAPTER IV.

FROM SMYRNA TO CONSTANTINOPLE.

Embarkation for Constantinople—Shores of Greece—The Hellespont—Classic associations—A disappointment—Constantinople—Beautiful scene—Caiques—Harbour of Constantinople—Minarets—The slave-market—Probability of an invasion of Turkey by Russia—Servile condition of the Turkish women—Blessings of Christianity.... 37

CHAPTER V.

CONSTANTINOPLE, AND VOYAGE TO SYRIA.

Visit to the Sultan—Pipes and coffee—Disputed point of etiquette—Servility of the officers—Presence of the Sultan—Sad reflections—Offer of a present—The American minister—Visit of the Sultan to the mosque—His appearance—Dancing dervishes—Necessity of religion—Receive our firman—Embarkation—Rejoin the "Supply"—Leave Smyrna—Gale—Scio—Riding on a rail—Ruins of Ephesus—Church of St. John — Patmos — Cos — Lunar rainbow — Candia — Rhodes—Cyprus—Mountains of Lebanon 45

CHAPTER VI.

FROM BEÏRÛT TO DEPARTURE FROM ST. JEAN D'ACRE.

Beïrût—Preparations—Peculiar costume—Departure—Sidon and Tyre—St. Jean d'Acre—Mount Carmel—Dangerous landing—Extensive view—Convent of Mount Carmel—Boats landed and tents pitched—Thieving—First night ashore—Arab horses—Brook Kishon—Akka—Visit to the American Consul—Appearance of the town—A drawback to personal charms—Governor of Acre—A conference—Difficulties—Arab curiosity—Audience at the palace—Singular mode of begging—'Akîl Aga—Attempt at extortion—Meeting with American travellers—Exciting reports—Deliberations—Troublesome visitors—Etiquette—Sherîf of Mecca—Camels used for draught—Delays.... 59

CHAPTER VII.

FROM ST. JEAN D'ACRE TO DEPARTURE FROM THE SEA OF GALILEE.

Disappointments—Effrontery of Sa'id Bey—Journey continued—Plain of Acre—Village of Abelin—Doubts and mistrust—Character of the village and surrounding country — Inhospitable reception — Embarrassing position—Relief—Arab morals—An escort—Blowing Valley—Picturesque views—Khan el Dielil—Castle of Sefûrich—Nazareth—Reflections—Mode of dealing among the Arabs—Equestrian exercises — Difficulties of the road — Tûran — Mount Tabor—Meet Dr. Anderson—An Arab repast—Music—Lubieh—Character of the country—Magnificent scenery—The Sea of Galilee—Thrilling emotions—Safed—Joseph's Well—Tiberias—Reception—Visits from and

to the Governor—Administration of justice—Thraldom of the Jews —Chapel of St. Peter—Jewish Synagogues—Habits and costume of the Jewish females—Letters from Jerusalem—Firman from the Pasha —Express from Acre—Launch of the boats—Profound emotion— Hot baths—Fish—Discouraging accounts of the Jordan—Summary dealings—Preparations for the Expedition—Visit from an ogre prince —Assignment of duties 76

CHAPTER VIII.

FROM THE SEA OF GALILEE TO THE FALLS OF BŬK'AH.

Departure of the boats—Scenery of the lake—Enter the Jordan—Mount Hermon—Bridge of Semakh—Dangerous situation of the boats— Character of the country—Arab hospitality—Formidable rapids— Village of Abeidîyeh—Falls and whirlpool of Bŭk'ah—Ruins of Delhemîyeh—Rejoined by the land-party—Predatory habits of the Bedawin—Account furnished by the land-party—Visit from Emir Nasser —Preparations for further progress—Night-encampment..... 99

CHAPTER IX.

FROM THE FALLS OF BŬK'AH TO THE FOURTH CAMPING-PLACE UPON THE JORDAN.

Daybreak excursion—Profusion of flowers—Gadara—Loss of a boat— Passage of the cascades—Imprudence—Descent of the fourth rapid —the River Yermâk—View from a hill-top—Bridge of the Place of Meeting—Ruined khan—Bedawin encampment—Continued succession of rapids—A noble Arab—Land of Issachar—Visit of Lieutenant Dale to Muhammed Pasha—Preparations for defence—Perilous situation of the Fanny Mason—Peculiar formation of the hills—Principal productions—Change of climate—Arab camp—Extraordinary windings of the river—Starting of the caravan—Desolate aspect of the country—Heat and drought—Arab beauty—A pastoral entertainment—A Turkish camp—An unwelcome escort—Arab tents—Voracity of the Arabs—A false alarm 110

CHAPTER X.

FROM THE FOURTH CAMP ON THE JORDAN TO THE FORD OF SŬK'WÂ.

Start anew — Wonder of the barbarians — Beautiful scenery — Wild beasts — Birds — Management of the boats — Meeting with 'Akīl— Perils of the voyage—Eastern Mountains—The ogre prince and his

tribe—Geological features of the country—Fish and Birds—Wild Boars—Indications of ruins—Ruins of Succoth—True character of the camel—Route of the caravan—Fording the river—Fresh difficulties and dangers of the river—General description of the country—Ford of Sŭk'wâ—Alarming intelligence—Exciting incident—Vegetation on the Jordan—The sukkum—Muhammedan sects—Arab fraternization—Description of the river—An Eastern scene—Mournful music—A singular minstrel—The Emir's love-song 127

CHAPTER XI.

FROM FORD OF SŬK'WÂ TO PILGRIM'S FORD.

Changes in the vegetation—Suspicious neighbourhood—Arab cookery—Mode of eating—Singular caverns—River Jabok—Scripture localities—El Meshra'a—A sacred spot—Capture of a camel—Gazelles—Jericho—Glimpse of the Dead Sea and mountains of Moab—Pilgrim's Ford — Army of pilgrims — Bathing in the Jordan — Happy meeting—Determination to proceed 155

CHAPTER XII.

FROM PILGRIM'S FORD TO FIRST CAMP ON THE DEAD SEA.

Further progress—Character of the river—Enter the Dead Sea—Gale—Arab tradition—Night upon the sea—Ancient caverns—Fountain of the Stride—Dismissal of our escort—Painful Desolation—Arab honour—A Bedawin feast—Unwelcome music—Arabs at prayer—Anxiety respecting the boats—Soundings of the Dead Sea—Brook Kidron—Valley of Jehoshaphat—Cliff of Mukŭtta—Aspect of the shores of the sea—Fresh-water stream 170

CHAPTER XIII.

FROM AIN EL FESHKHAH TO AIN JIDY (ENGADDI).

Preparations for moving southward—Wilderness of Engaddi—Evidences of former cultivation — Cavernous mountain — Examination of the boats—Barometrical and thermometrical observations—Scruples of the Arabs in regard to pork—Their sobriety—Their habits of pilfering—Singular phenomenon—Arabs' opinion of the cause of our visit—Atmospheric phenomena—Currents in the Dead Sea—Magnificen sunset—An Arab dance—Kindness of Mr. Finn, the British Consul—Departure for the peninsula—Orders—Result of soundings—Description of the Peninsula—Geological formation—Total absence of vegetation—Bushes incrusted with salt—The River Arnon—Arab improvisatore 183

CHAPTER XIV.

EXPEDITION AROUND THE SOUTHERN SEA.

Start upon a reconnoissance—Currents—Cliff of Sebbeh—Ruined fortification—Geological formation of the western shore—Locusts—Moses' stone—Fears and anxieties of the Arabs—A sirocco—Search for the ford—Landing at Usdum—Salt mountain—Pillar of salt—Bitter melon—Dismiss the Arabs—Heat of the soil—Difficulties in taking observations—Remarkable phenomenon—Burning hurricane—Painful effects of the sirocco—Insupportable heat and thirst—A dreadful night—Abatement of the heat—Moab—Arabs' ideas respecting the boats—Verification of Scripture narrative—Usefulness of the Arabs—Atmospheric refraction—Tendency to drowsiness—Return to Ain Jidy — Intelligence from home — Dwellings in the rock — Egerian fountain—Luxurious repast—Singular appearance of the sea—Density of the water—Opinion of Galen—The osher, or apple of Sodom—Character of the north winds—Call to prayer—Party despatched to Masada—Firing of minute-guns in honour of Ex-President Adams—Remarkable changes in the aspect of the sea—Mode of reaping and threshing among the Arabs—Their humanity to animals 197

CHAPTER XV.

FROM CAMP TO THE CAPITAL OF MOAB.

The day of rest—Effects of the climate upon health—Irresistible drowsiness — Battle between two parties of Arabs — Friendly invitation from the sheik Abd 'Allah—The fellahin tribes—Mezra'a—Christian Arabs — Mode of salutation — Zoar — Ancient ruins — Muslim and Christian sheikhs—Curiosity and superstition of the Arabs—Songs of welcome and war-cries — Ancient fortification — Appalling storm — Wild character of the scenery—Inexpertness of the Arab marksmen—Entrance into Kerak—Filth and discomfort of the dwellings—A Christian priest and chapel—Magnificence of the castle—Ambitious views of 'Akil—Discontent of the Muslim sheikh—Oppression of the Christians of Kerak—Their appeal to the Christians of America—Nocturnal pleasures — Departure from Kerak — Insolence of the Arabs—Muhammed made prisoner—Arrival at the beach—Release of Muhammed—Embarkation 218

CHAPTER XVI.

CRUISE ALONG THE ARABIAN SHORE.

The river Arnon—Lofty cliffs—Singular ravine—Fears of sickness—Sketch of the shores—Hot springs of Callirhoe—Delightful contrast 244

CHAPTER XVII.

FROM THE OUTLET OF THE HOT SPRINGS OF CALLIROHOE TO AIN TURÂBEH.

Changes of temperature—Deep soundings—Arrival at Ain Turâbeh—Return to the tents—Preparation for departure—Intense heat—Sirocco—The bulbul—American flag floating over the sea—Analysis of the water—Result of our labours—Hypotheses—Conviction of the truth of the Scripture narrative—Our last night on the Dead Sea .. 248

CHAPTER XVIII.

FROM THE DEAD SEA TO THE CONVENT OF MAR SABA.

Breaking up of our camp—Incidents of the journey—Night encampment—Sherîf tells his history—His character—Monks of Mar Saba Intelligence from the sick seamen—Rapid change of climate—Holy associations—Specimens forwarded—Painful alternations of temperature—The brook Kedron—Convent of Mar Saba—Plants and flowers —The hyssop—Thunder-storm—The coney 254

CHAPTER XIX.

FROM MAR SABA TO JERUSALEM.

Arab attendants discharged — Rocky cistern — Desolate aspect of the country — Fulfilment of prophecy — Arab burial-ground—Arab encampment—Tobacco—Pilgrims' road—The tribe Subeih—Curiosity of the people—Attempted extortion—Insecurity of the husbandman—An Arab's love—Mode of courtship—Jealousy and revenge—First view of Jerusalem—Prominent objects—Character of the surrounding country—Well of Job — Mount of Offence—Pool of Siloam—Fountain of the Virgin — Village of Siloam — Tombs of Absalom, Zacharias, and Jehoshaphat—Garden of Gethsemane—Valley of the Son of Hinnom—The Aceldama—Garden of Urias—Mount Zion—Hill of Evil Counsel—View from the encampment—Night under the walls of Jerusalem 266

CHAPTER XX.

JERUSALEM.

Levelling proceeded with—Tomb of the Empress Helena—Scenery on the Jaffa road—Convent of the Holy Cross—Ludicrous superstition—View of the city—Habitations of the lepers—Boats sent to Jaffa—Dr. Anderson leaves us—His praiseworthy conduct—Extract from

the diary of one of the officers—His first day in Jerusalem—Via Dolorosa—Mosque of Omar—Church of the Holy Sepulchre—Pious zeal of the Pilgrims—Description of the interior of the Church of the Sepulchre—Ascent of the Mount of Olives—Visit to the Garden of Gethsemane—The Golden Gate—Fountain of the Virgin—Armenian convent—Character of the visitors to Jerusalem—Sacred localities, their claims to confidence—Scripture predictions—Scientific labours continued—Interesting localities—Magnificent view from the Mount of Olives—Kindness of the British Consul—Pool of Bethesda—Varieties of costume—Singular marriage-procession—Walls of the city—Muhammedan and Christian predictions—Visit to Bethlehem—Pool of Gihon—Well of the Magi—Plain of Rephaim—Convent of John the Baptist—Tomb of Rachel—Wilderness of St. John—Valley of Elah—David's Well—Doubts as to the birth-place of the Messiah—Calmet's views—Hill of the Annunciation—Ruth's gleaning-ground—Treatment of pilgrims at Jerusalem—Restrictions upon Christians—Products of the country 269

CHAPTER XXI.

FROM JERUSALEM TO JAFFA.

Preparations for departure—Luxuriant vegetation—Scriptural localities—The olive tree—View of the Mediterranean—Vale of Sharon—Village of Latrun—Gaza—Kubab—Jackals—Filthy habits of the people—Ramleh—Environs of the town—Yâzûr—Dervishes and pilgrims—Results of our operations in levelling—Jaffa—Copt village Muhammedan superstitions—Throwing the djerid—Funeral procession—Syro-American Consul—Historical and mythological recollections of Jaffa—Traditions—Population—Kindness and courtesy of the Consul—Bridal procession—Treatment of Turkish wives—Laws of divorce—Universal thraldom of woman—Turkish laws of inheritance—Zodiacal lights—Treatment of slaves..... 290

CHAPTER XXII.

FROM JAFFA TO NAZARETH.

Preparations—Departure of the land-party for St. Jean d'Acre—Embarkation—View of Jaffa from the harbour—Arrival at St. Jean d'Acre—Route of the land-party—Dreadful accident to one of the seamen—Visit from Sherîf and 'Akil—Visit returned—Arab entertainment—Start for Nazareth—Valley of the Winds—Annoying accident—Arrival at Nazareth—Scene at the Fountain of the Virgin—Franciscan convent—Description of the town—Turkish tax-gatherer—Flowers collected 302

CHAPTER XXIII.

FROM NAZARETH TO THE SOURCE OF THE JORDAN.

Start for Mount Tabor—Plain of Esdraelon—Village of Nain—Ascent to the summit of Mount Tabor—Ruins—Ruined villages—Leave the lower Jordan—Sea of Galilee—Ruins of Tarrichæa and Kades—Hot bath of Emmaus—Tiberias—Magdala—Ruins of Khan Minyeh—Fountain of the Fig—Debouchure of the upper Jordan—Singular tents—Bethsaida—Aspect of the country—View of Mount Hermon—Lake Merom—The Golden Stream—Castle of Honin—Roman bridge—The Ancient Dan—Derivation of the word Jordan—Cesarea Philippi—Improvements in culture and civilization—Town of Hâsbeiya—Population of the town—Variety of sects—Religious discord—Persecution of Protestants—Visit from Prince Ali—Source of the Jordan—Terrace cultivation—Visit to the valley of the Litany—Women at the fountain—A trying transition..... 307

CHAPTER XXIV.

FROM THE SOURCE OF THE JORDAN TO DAMASCUS, BA'ALBEK, BEÏRÛT, AND HOME.

Joyful intelligence—Start for Damascus—Druse villages—Gorge of the Wistanee—Cities visible—Geological features—Mineral spring—Approach to Damascus—Description of the town—Meeting with an American—The flag of our country displayed—Turkish insolence—St. Paul's escape from Damascus—Antiquity of the town—Jewish dwellings—Dress of the Jews—Distinguished visitors—Village of Zebdâny—Ruins of Heliopolis—Indisposition of some of the party—Roman mound—Arab fellâhas—Increasing sickness—Numerous villages—Town of Zahley—Roman road—Arrival at the sea-shore—Exhaustion and increasing illness—Convalescence—Anniversary of our country's independence—Alarming illness of Mr. Dale—Kindness of Rev. Mr. Smith and Dr. De Forest—Visit from Dr. Vandyke—Death of Mr. Dale—Preparations to convey the remains to his native land—Painful accident and disappointment—Interment of the body in the Frank cemetery—Embarkation—Arrival at Malta—Kindness of the American Consul—Arrival of the Supply—Reëmbarkation—Uncourteous reception at Naples, Marseilles, and Gibraltar—Arrival home—Conclusion—Analysis of Dead Sea Water. .. 318

EXPEDITION

TO

THE DEAD SEA.

CHAPTER I.

INTRODUCTORY.

On the 8th of May, 1847, the town and castle of Vera Cruz having some time before surrendered, and there being nothing left for the Navy to perform, I preferred an application to the Hon. John Y. Mason, the head of the department, for permission to circumnavigate and thoroughly explore the Lake Asphaltites or Dead Sea.

My application was warmly seconded by Commodore Skinner, and having been for some time under consideration, I received notice, on the 31st of July, of a favourable decision, with an order to commence the necessary preparations.

On the 2d of October, I received an order to take command of the U. S. store-ship "Supply," formerly called the "Crusader."

In the mean time, while the ship was being prepared for her legitimate duty of supplying the squadron with stores, I had, by special authority, two metallic boats, a copper and a galvanized iron one,[1] constructed, and shipped ten seamen for their crews.

[1] Built by the patentee, Mr. Joseph Francis of New York.

I was very particular in selecting young, muscular, native-born Americans, of sober habits, from each of whom I exacted a pledge to abstain from all intoxicating drinks. To this stipulation, under Providence, is principally to be ascribed their final recovery from the extreme prostration consequent on the severe privations and great exposure to which they were unavoidably subjected.

Two officers, Lieutenant J. B. Dale and Passed Midshipman R. Aulick, both excellent draughtsmen, were detailed to assist me in the projected enterprise.

In November I received orders to proceed to Smyrna, as soon as the ship should in all respects be ready for sea; and, through the U. S. Resident Minister at Constantinople, apply to the Turkish government for permission to pass through a part of its dominions in Syria, for the purpose of exploring the Dead Sea, and tracing the River Jordan to its source.

I was then directed, if the firman were granted, to relinquish the ship to the first lieutenant, and land with the little party under my command on the coast of Syria. The ship was thence to proceed to deliver stores to the squadron, and Commodore Read was instructed to send her back in time for our re-embarcation.

In the event of the firman being refused, it was directed that the ship should rejoin the squadron without proceeding to the coast of Syria, but I had permission to resign the command of her for the purpose of prosecuting the enterprise alone, on my own responsibility, and at my own expense.

The ship was long delayed for the stores necessary to complete her cargo. The time was, however, fully occupied in collecting materials and procuring information. One of the men engaged was a mechanic, whose skill would be necessary in taking apart and putting together the boats, which were made in sections. I also had him instructed in blasting rocks, should such a process become necessary to ensure the transportation of the boats across the mountain ridges of Galilee and Judea.

Air-tight gum-elastic water and bread bags were also procured, to be inflated when empty, for the purpose of serving as life-preservers to the crews in the event of the destruction of the boats.

Our arms consisted of a blunderbuss, fourteen carbines with long bayonets, and fourteen pistols, four revolving and ten with bowie-knife blades attached. Each officer carried his sword, and all, officers and men, were provided with ammunition belts.

As taking the boats apart would be a novel experiment, which might prove unsuccessful, I had two low trucks (or carriages without bodies) made, for the purpose of endeavouring to transport the boats entire from the Mediterranean to the Sea of Galilee. The trucks, when fitted, were taken apart and compactly stowed in the hold, together with two sets of harness for draught horses. The boats, when complete, were hoisted in, and laid keel up on a frame prepared for them; and with arms, ammunition, instruments, tents, flags, sails, oars, preserved meats, and a few cooking utensils, our preparations were complete.

CHAPTER II.

FROM NEW YORK TO PORT MAHON.

All things being in readiness, on the 20th of November, 1847, we dropped down from the Brooklyn Navy-Yard, abreast of the Battery, and waited for a change of weather.

Friday, Nov. 26. At 10 A. M., weighed anchor, and, with a fresh breeze from W. N. W., under a press of sail, we stood down the bay of New York. Around us the ruffled water was chequered with numerous sails, and the shadows of detached clouds flitting before the keen and cutting wind, fit harbinger of the coming frost. Before us, the "Narrows" opened into Raritan Bay, and thence expanded into the wide-spread and magnificent ocean.

In a few hours, we passed the light-houses; discharged the pilot, and bracing our yards to the fresh and favouring breeze,

bade, as God in His mercy might decree, a temporary or a final adieu to our native land.

Soon the low lands were sunk beneath the horizon, and at sunset the high lands of "Navesink" were alone visible above the agitated surface of the water. The dry wind sweeping over the land, which had been saturated by the rains of the two preceding days, caused an evaporation so great as wonderfully to increase the refraction. The setting sun, expanding as it dipped, and varying its hues with its expansion, assumed forms as unique as they were beautiful. Now elongated in its shape, and now flattened at its ends, it would, at times, be disparted by the white crest of an intervening wave, and present alternately the appearance of golden cups and balls, and jewelled censers, tossing about upon a silver sea. As the minutes advanced, the western sky, tint by tint, became one glorious suffusion of crimson and orange, and the disc of the sun, flattening, widening, and becoming more ruddy and glowing as it descended, sunk at last, like a globe of ruby in a sea of flame.

I took this as an auspicious omen, although we sailed on Friday, the dreaded day of seamen. Why superstition should select this day as an unlucky one, I cannot conceive. On the sixth day, Friday, God created man and blessed him; and on Friday, the Redeemer died for man's salvation: on Friday, Columbus sailed from Palos in quest of another world: on the same day of the week, he saw the realization of his dream of life; and returned upon a Friday, to electrify Europe with the wondrous tidings of his discovery. As a harbinger of good, therefore, and not of evil, I hailed our departure upon this favoured day.

With the setting sun, all vestige of the land disappeared, and nothing remained but a luminous point, which, from the solitary light-ship, gleamed tremulously across the waters. As it sunk beneath the waves, our last visible tie with the Western World was severed. How gladly on our return, perchance a tempestuous night, shall we hail that light, which, flickering at first, but at length steadfast and true, welcomes the weary wanderer to his home!

Without the least abatement of affection for, I turned with less reluctance than ever from, the land of my nativity. The yearnings of twenty years were about to be gratified. When a young midshipman, almost the very least in the escort of the good Lafayette across the ocean, my heart was prepared for its subsequent aspirations. In truth, in our route across the Atlantic, in the silent watches of the night, my mind, lost in contemplation, soared from the deep through which we ploughed our way, to that upper deep, gemmed with stars, revolving in their ceaseless round, and from them to the Mighty Hand that made them; and my previous desire to visit the land of the Iliad, of Alexander and of Cæsar, became merged in an insatiate yearning to look upon the country which was the cradle of the human race, and the theatre of the accomplishment of that race's mysterious destiny; the soil hallowed by the footsteps, fertilized by the blood, and consecrated by the tomb, of the Saviour.

Twice, since, at distant intervals, I contemplated making the desired visit. But the imperative calls of duty in the first instance, and a domestic calamity in the second, prevented me. As I have before said, in the spring of the present year I asked permission to visit the lands of the Bible, with the special purpose of thoroughly exploring the Dead Sea; the extent, configuration, and depression of which, are as much desiderata to science as its miraculous formation, its mysterious existence, and the wondrous traditions respecting it, are of thrilling interest to the Christian.

The same liberal spirit which decided that the expedition should be undertaken, directed ample means to be furnished for its equipment; and with our boats, arms, ammunition and instruments, I felt well prepared for the arduous but delightful task before me.

The boats "Fanny Mason" and "Fanny Skinner," of nearly equal dimensions, were named after two young and blooming children, whose fathers were, in a measure, the patrons of the expedition. And I trusted that, whether threading the rapids of the Jordan, or floating on the wondrous sea of death, the "Two

Fannies" would not disgrace the gentle and artless beings whose names they proudly bore.

Friday, Dec. 11. This morning, made the islands of Corvo and Flores, the north-westernmost of the Azores, and by sunset we had reached the meridian of Flores, its brown and furrowed sides, undecked with a single flower, and giving no indication of the origin of its name. Fearing that we should be becalmed if we ran to leeward of it, and the sea setting heavily upon Corvo, I determined to run between them, although we had no chart of the islands, and no one on board knew whether or not the passage was practicable. To this, I was induced by two considerations: In the first place, from the rounded summits of the islands, they were evidently of volcanic origin, and shoals are rare in such vicinities. In the second place, the sea ran so high, that it must break over any intervening obstacle, and present a distinct and prohibitory line of foam. We therefore stood boldly through, and, as if to cheer us, the rays of the setting sun, intercepted by a rain-cloud which had swept over us, arched the passage by the best-defined and most vivid rainbow I have ever seen. It was so striking, that every draughtsman on board was immediately employed, endeavouring to catch the flitting beauties of the scene.

By the time we reached the middle of the passage, the bow had faded away with the setting sun, leaving the sky less brilliant, but far more beautiful. In the east, directly ahead, rose the planet Jupiter, lustrous as a diamond, cresting with his brilliant light the line of vapour which skirted the horizon. Near the zenith, shone the moon in her meridian; lower down, the fiery Mars; and in the west, the beautiful Venus slowly descended, enveloped in the golden hues of the sun, which had preceded her. The gorgeous sun, the placid moon, the gem-like Jupiter, and the radiant Venus, bespoke the enduring serenity and the joys of Heaven; while the agitated sea, crested with foam, breaking loudly on either shore, which, in the gathering dimness, seemed in dangerous proximity, told of the anxieties and perils of this transitory life.

We passed through unimpeded, at a glorious rate, and the next day, at 4 P. M., were abreast and in sight of the island Graciosa, the last of the group in our line of route, its rude outlines dimly seen through its misty shroud. The barren faces of these lofty islands present no indication of their fertility. They abound, however, in cereal grains, and produce an excellent wine, and are frequently resorted to by our whalers, and by homeward-bound Indiamen, for supplies.

Friday, Dec. 17. Made Cape St. Vincent, the "Sacrum Promontorium" of the Romans, and the south-western extremity of vine-clad Portugal, as it is of Europe also. This is the second time we have made land upon a Friday.

Sunday, Dec. 19. Made Cape Trafalgar, and sailed over the scene of the great conflict between the fleet of England and the combined fleets of France and Spain. Here were once heard those sounds, frightful, yet stirring to the human heart, and appalling to every other creature,—the shout of defiance, the shriek of agony and the yell of despair,—and fish, and bird, and every other living thing fled precipitately from the scene, leaving man, the monarch of creation, to slay his fellow-man, the image of his august Creator! Such is battle! and he who rushes into it, impelled by other than the highest motives, perils more than life in the encounter. It is a glorious privilege to fight for one's country; but the seaman or the soldier who strikes for lucre or ambition, is an unworthy combatant.

4 P. M. Anchored immediately abreast of the town of Gibraltar.

The rock of Gibraltar, abrupt on its western side, and on the other absolutely precipitous, has a summit line, sharp and rugged, terminating with a sheer descent on its northern face, and sloping gradually to Europa point at its south extreme. From an angle of the bay, this rock, 1400 feet high and three miles long, presents the exact appearance of a couchant lion;—his fore-paws gathered beneath him, his massive, shaggy head towards Spain, his fretted mane bristling against the sky, and his long and sweeping tail resting upon the sea.

The entire water front of the bay is one continuous line of ramparts, and, from numerous apertures, the brazen mouths of artillery proclaim the invincible hold of its present possessors. It is said, that there is not one spot in the bay, on which at least one hundred cannon cannot be brought to bear. Its northern face, too, is excavated, and two tiers of chambers are pierced with embrasures, through which heavy pieces of ordnance point along the neutral ground upon the Spanish barrier. This neutral ground, a narrow isthmus, at its junction with the rock, but soon spreading out into a flat, sandy plain, separates, by about half a mile, the respective jurisdictions of Great Britain and Spain.

Sailing from Gibraltar, we arrived at Port Mahon, after a boisterous passage of eight days; and were there detained a month, delivering stores to the squadron.

CHAPTER III.

PORT MAHON TO SMYRNA.

Friday, Feb. 4th. At midnight left the harbour of Mahon with a light but favourable wind. Our stay had been so protracted that we gladly hailed the familiar sight of a boundless horizon before us. We had all become somewhat impatient of the many causes of detention that had interfered with our departure; and were, of course, proportionately elated when at length we were again careering over the blue waves of the Mediterranean.

The breeze freshened as the night wore on, and we wended joyfully on our way, each congratulating the other on the prospect of a speedy disembarcation. The next day we passed south of Sardinia; and the morning after made the Island of Maritimo, and beyond it could see the blue outlines of Sicily. The day was at first clear and beautiful, but, with the ascending sun, a

dim vapour spread along the sky, and, wafted by the wind, like a misty shroud, enveloped the larger island. To the eye, all was serene and peaceful, but beneath that veil, the myrmidons of power and the asserters of human rights were engaged in deadly conflict. The Sicilian revolution had begun. Its end, who could foresee?

P. M. Passed the island of Pantellaria, the Botany Bay of Naples and Sicily, and accounted by some to be the Isle of Calypso.

At early daylight, the Islands of Gozo (the true Calypso) and of Malta were directly before us. To the eye they presented the barren aspect of rugged brown rocks, their surfaces unrelieved by tree or verdure; and the houses, built of the same material, and covered with tile, rather added to, than varied, the tiresome uniformity of the scene.

With a fresh and favourable wind, we sailed along the abrupt and precipitous shores, and came to anchor in the famous port of Valetta. Three promontories, their summits fretted with artillery, frown down upon the triune harbour. Along the city walls, from Castle Ovo to the extreme point on the right, are lines of fortifications, relieved here and there by some towering Saracenic structure, presenting, in graceful contrast,

"The Moorish window and the massive wall."

Here, too, has Napoleon been! From Moscow to Cairo, where has he not?

As we were not admitted to *pratique*, we saw nothing more of Malta, but left it at sunset. Having once before been there, I bear in vivid remembrance her many scenes teeming with interest. The bay and the cave, spots consecrated by the shipwreck and the miraculous preservation of the great Apostle of the Gentiles: her armory, with its shields and swords, and her rare and exquisite gardens.

Saturday, Feb. 12. At daylight, made the Island of Cerigo, the ancient Cythéra, upon which was wafted, at her birth, the Goddess of Love and Beauty. It is also reputed to have been the birth-place of Helen, the frail heroine of the Trojan war

Passing under easy sail, between Cerigo and Ovo, leaving Candia (ancient Crete) to the south, we entered the blue Egean, and had the group of the Cyclades before us as we turned to the north. In the course of the day we saw Milo, famed for its spacious harbour and its excellent wine; Paros for its marble quarries, and Anti-Paros for its celebrated grotto, deemed one of the wonders of the world.

Sailing through the Sporadic group, we passed the Gulf of Athens, and saw Cape Colonna, (ancient promontory of Sunium,) where Plato taught, and where are the ruins of a temple of Minerva.

Greece! poetic Greece! but that my soul is engrossed by one pervading thought, how I would love to visit thy shores! How *have* I loved to follow the muse in this favoured land! How delighted to pursue the arts, and trace the history of this wonderful people! How admired the chaste philosophy of Greece, springing with Corinthian beauty into life, amid the storms of sedition, and bending, like the brilliant Iris, her beautiful bow in the clouds which had overshadowed her sleeping oracles! The bold and inquisitive spirit of Grecian philosophy could not be fettered by a loose and voluptuous religion, however graceful in its structure and poetical in its conceptions. Grecian philosophy, reflecting the early rays of revelation, more powerful than the Titans, scaled the pagan Heaven, and overthrew its multitude of gods.

Did time permit, how would I love to look upon the Piræus and the Acropolis! Upon the place where Socrates, in the dispensation of a wise Providence, was permitted to shake the pillars of Olympus, and where the Apostle of Truth, in the midst of crumbling shrines and silenced deities, proclaimed to the Athenians the *Unknown God*, whom, with divided glory, they had so long worshipped in vain.

Continuing our route through the Sporades, between Ipsari, and Scio of sad celebrity, we rounded, on the morning of the 15th, the promontory of Bouroun, and entered the Gulf of Smyrna.

P. M. By a sudden transition from the fresh head-wind without, we were now floating upon the placid bosom of a beautiful

bay, with our wing-like sails spread to a light and favouring breeze.

Far beyond the shore, might be seen the snowy crest of the Mysian Olympus. We passed in sight of the first Turkish town, with its little cubes of flat-roofed houses, and its groves and trees, so refreshing to the eye after the Grecian isles, all brown and barren. It was the ancient Phocœa.

The bay was dotted with the numerous sails of the feluccas, outward and inward bound. As we passed, the bay of Vourla opened on our right,—and on the left, were some remarkable green hills,—and beyond them, a long, very long, low track, with a barely visible assemblage of white dots beyond. It was Ismir! Infidel Ismir! Christian Smyrna! The setting sun empurpled the neighbouring mountains, gilding here and shadowing there, in one soft yet glorious hue, lending a characteristic enchantment to our first view of an Oriental city.

The wind failing, we anchored about eight miles from Smyrna, near Agamemnon's wells. Abreast, was fort Sanjak Salassi, with its little turrets and big port-holes, even with the ground, whence protruded the cavernous throats of heavy guns, entirely disproportioned to the scale of the fortifications.

The next day, sailed up and anchored abreast of the city.

We landed and passed into the streets, the narrow, winding ways of Smyrna. How strange everything seems! After all one has fancied of an eastern city, how different is the reality! The streets are very narrow and dark, and filled with a motley and, in general, a dirty population—passing to and fro, or sitting in their stalls, for they deserve no better name. Greeks, Armenians, and Jews, seem to prevail.

But the most striking living feature of the east is the long strings of camels, huge, meek-looking beasts, with long necks and small projecting heads, tramping along under enormous loads, with their great pulpy, India-rubber splay feet, threatening to bear down everything in their onward march. Again and again we were compelled to slip into the open stalls to avoid being crushed. At length we adopted the precaution of each one keeping under

the lee, as sailors term it, of a heavy-laden camel, for it was not only necessary to avoid the camels and little donkeys, but also dirty, ragged, staggering, overladen porters, whose touch threatened not only to communicate the plague, but also whole detachments of the insect tribes of Egypt.

The city of Smyrna, so inviting in its exterior, is crowded, dirty, and unprepossessing within. The houses, excepting those on the Marina, or Water front, rarely exceed one story in height, and are dingy and mean; and the very mosques, so imposing from without, fall far short of the conceptions of the visitant.

The River Meles, sacred to Homer, in winter a foaming torrent, but in summer scarce a flowing stream, runs in a northerly direction, along the eastern limits of the city. On the line of travel to the East, it is spanned by the caravan bridge, the great halting-place of returning and departing caravans. As we saw it, the river was a shallow stream, not half filling the space between the widely separated banks. Kneeling on the sands, on each side of the river, above and below the bridge, were many hundreds of camels, with their heavy packs beside them. It was the hour of feeding, and, arranged with their heads in the centres of circles, of which their tails formed the peripheries, without noise, they ate the dry straw which was placed before them. While we looked on, the hour elapsed, and the burdens were replaced on the backs of the patient animals. Although constituting a number of separate caravans, they were all, evidently, subject to the same regulations. At a given signal, they slowly raised first one foot and then another from beneath them, and then, with a peculiar cry, plaintive yet discordant, jerked themselves, as it were, to an erect position. The turbaned drivers, the uncouth, patient camels, and the tinkling bells, formed a scene truly Asiatic.

The country around Smyrna is highly cultivated, and the benignant soil and genial climate amply repay the toil of the husbandman. Less productive of the cereal grains, its vintage and its crops of fruit are most superior and abundant. Except the mountain sides, which are sparsely covered with brushwood, the frequent groves of cypress, each denoting a burial-place, and the

clusters of orange trees around the villas of the wealthy, the surface of the country is thickly dotted with the olive and the almond, the mulberry and the fig-tree. Smyrna is particularly celebrated for an exquisitely flavoured and seedless grape, and for the superior quality of its figs.

It is also one of the claimants for the birth-place of Homer, the blind old bard, whose fame was purely posthumous! The Grecian virgins scattered garlands throughout the seven islands of Greece upon the turf, beneath which were supposed to lie the remains of *him*, who wandered in penury and obscurity through life, or only sang passages of his divine poem at the festive board of his contemporaries. We were shown his cave—but I will no longer trust myself to speak of him, whom

"I feel, but want the power to paint."

We also visited Diana's bath, whence Acteon's hounds, like many a human ingrate after them, pursued and tore the hand that had caressed them.

CHAPTER IV.

SMYRNA TO CONSTANTINOPLE.

Friday, Feb. 18. At 5, P.M., embarked in the Austrian steamer "Prince Metternich," for Constantinople; and sweeping with great rapidity up the beautiful Gulf of Smyrna, early in the night entered the channel of Mitylene, between the Island of Mitylene (the ancient Lesbos) and the main.

As we advanced to the north, with the coast of Phrygia on the right, we soon beheld that of Thrace in Europe before us, with the islands of Lemnos and Imbros to seaward. Immediately on the Phrygian shore, facing the broad expanse of the Mediterranean, are two conspicuous tumuli, pointed out by tradition as the tombs

of Achilles and Patroclus. The requiem of the heroic friends is sung by the surging waves, which break against the abrupt and precipitous shore.

Turning to the east, we rounded Cape Janissary (the Sigæan Promontory), and entering the strait, saw the supposed bed of the Scamander, between which and the promontory, the Grecian fleet was hauled up, and the Grecian hosts encamped. A little beyond, is another barrow, said to be that of Hecuba; yet further is the Rhætian promontory, on which also is a mound, called the tomb of Ajax.

The plain of Troy, so familiar to every classic reader, now barren and unattractive, save in its associations, presents nothing to the eye until it rests upon Mount Olympus in the distance; and the imagination, fixing upon the spot where

"Silver Simois and Scamander join,"

fills the circumjacent plain with the lofty towers of "wide extended Troy," the beleaguring hosts and their dismantled ships. Passing a point on the left, designated as the first in Europe whereon was raised the banner of the Saracen, we came to that part of the strait whence its other name of Hellespont is derived.

The Hellespont teems with more poetic and classic associations than any other stream on earth. Its shores were the chosen scenes of the greatest and most wondrous epic produced in any age or clime; and, separating two great continents, its swollen and impetuous waters have been repeatedly crossed by invading armies; by two Persian monarchs, by Philip's warlike son, by the crusading hosts of Europe, and by the Muhammedan conqueror of Constantinople.

Its rushing flood engulfed Leander within hearing, perhaps, of the thrilling shriek of the watchful and agonized Hero: and it is left to the imagination to decide whether the lover, paralyzed by fear, yielded unresistingly, or, with all that he coveted on earth in view, grappled with fate, and struggled manfully, until, with the water drumming in his ear and gurgling in his throat, he sank beneath the surface as the last heart-rending cry swept across the angry tide.

Here, too, turning from poetic fiction to prosaic fact, the noble bard of England successfully rivalled the feat of Leander; but for his reward, instead of the arms of a blooming Hero, found himself grappled in the chill embrace of a tertian ague.

A little after sunset, we entered the sea of Marmara (White Sea). The mists and clouds, which during the afternoon had gathered on the hills of Thrace, were now swept towards us, and discharging copious showers as they passed, the sea and its surrounding shores were soon shrouded in obscurity.

When we retired, we were told that the steamer would stop until morning at the village of San Stefano, four leagues this side of Constantinople, and we anticipated enjoying the matchless view which this city is said to present from the sea of Marmara; but a bitter disappointment awaited us. On first awaking in the morning, we felt that the boat was not in motion, and hastening immediately to the deck, discovered that we were anchored in the "Golden Horn," or harbour of Constantinople.

On our left was the Seraglio, with the city of Stambohl (or Constantinople proper) stretching to the north and west, with a multitudinous collection of sombre houses, the dull, brown surfaces of their tile-roofs interrupted by the swelling domes of mosques, with their tall and graceful minarets beside them.

The "Golden Horn," three miles in length, was filled with ships and vessels of every class, and rig, and nation; and hundreds of light and buoyant caiques flitted to and fro among them. In the far distance, above the two bridges, the upper one resting on boats, flanking the harbour in an oblique line, were the heavy ships of war of the Turkish fleet. To the right, on the opposite side of the harbour, were the suburbs of Pera, Tophana, and Galata (each of them elsewhere a city), with the tower of the last springing shaft-like to the skies. To the east, across the sea of Marmara, where it receives the Bosporus, was the town of Scutari (the ancient Chalcedon), where the fourth general council of the Christian church was held. Near Scutari, is a spacious grove of cypress, shading its million dead; and a high mountain behind it

overlooks the cities, the harbour, the sea, the Bosporus, and the surrounding country.

But, wearied with the very vastness of the field it is called upon to admire, the eye reverts with renewed delight to the beautiful point of the Seraglio.

A graceful sweep of palaces, light in their proportions and oriental in their structure, washed by the waters of the Sea of Marmara and the "Golden Horn," look far up the far-famed Bosporus. Here and there, upon the ascending slope, clustering in one place, and dispersedly in another, many a cypress shoots up its dark-green, pyramidal head, between the numerous and variegated roofs. The shaft-like form of the minaret seems to have been borrowed from the cypress, and they both exquisitely harmonize with oriental architecture. On the summit is a magnificent mosque, its roof a rounded surface of domes, the central and largest covered with bronze, and glittering in the sun, with a light and graceful minaret springing from each angle of its court. The pen cannot describe, nor the pencil paint, the beauties of the scene: I will not, therefore, attempt it.

It is said, but untruly, that the slave-market of Constantinople has been abolished. An edict, it is true, was some years since promulgated, which declared the purchase and sale of slaves to be unlawful. The prohibition, however, is only operative against the Franks, under which term the Greeks are included. White male slaves are purchased for adopted sons, and female ones for wives or adopted daughters. Nubians are bought as slaves, to serve the allotted term. Young females, of the principal families of Georgia or Circassia, are often entrusted to commissioners, who are responsible for their respectful treatment. They are only purchased with their own consent, and when so purchased, are recognised by the Muhammedan law as wives; the portion is settled upon them by law, and if the husband misuses them, or proves unfaithful, they can sue for divorce, and recover dowry. But, unfortunately, the husband has the power to divorce at will, without resorting to any tribunal; and the words, "I divorce you," from his lips, are, to the poor woman, the sentence of dis-

missal from her husband's roof, and from the presence of her children. If dismissed without good cause, however, she has a right to dowry, but is ever after debarred from appeasing that mighty hunger of the heart, the yearning of a mother for her children.

The female slaves, bought for servitude, are subject to the wife, and not to the husband. He has no property in them, but is bound to protect and to aid them in their settlement.[1] The males rise in condition with their masters: several pashas have been bondmen, and Seraskier Pasha was once a Georgian slave.

In a ramble to and from the slave-market, I saw two females, whose lots in life are now widely different. The first was a Circassian slave, young and interesting, but by no means beautiful, attired plainly in the Turkish costume, and her features exposed by the withdrawal of the yashmak. She walked a few paces behind her owner, who passed to and fro about the market. Stopping occasionally, and again renewing his walk, he neither by word nor gesture sought to attract a customer. When he was accosted, she quietly, but not sadly, submitted to the inspection, and listened in silence, and without perceptible emotion, to the interrogatories of the probable customer.

The second female to whom I have alluded was an Armenian bride being escorted to the residence of her husband. There were three arabas, or clumsy carriages of the country, drawn by two oxen each. On the backs of the oxen were four or five stakes diverging outwards, like radii from a centre, with long hearse-like purple plumes drooping from them. The panels of the second araba were richly carved and blazoned, and its roof was supported on upright gilt columns, with richly embroidered curtains, and fringes of silk. The concave bottom had no seats, but was covered with cushions, upon which, at half-length reclined the bride, with a female attendant beside her. The former was gorgeously dressed, but her head and its appendage riveted my attention.

---

[1] "And when thou sendest him out from thee, thou shalt not let him go away empty." — Deut. xv. 13.

From it hung a veil (I can call it nothing else), composed of long strings of bright gold beads, spanning from temple to temple, and reaching from the forehead to the waist. With the motion of the araba, it swayed to and fro in gently waving lines, but without disparting, and my strained vision could not penetrate the costly screen. I have heard of the man in the iron mask, but never before of a woman in a golden one.

The husband, who is yet as ignorant as myself, may, like the Prince of Arragon, find only the blank countenance of a blinking idiot beneath it, and discover, when too late, that the

> "Beauteous scarf
> Veils but an Indian beauty."

They were both destined victims to the matrimonial customs of the country; and perhaps the sacrifice of the poor Circassian may not be more venal than the mercenary marriage of the other.

The conditions of the two females are now widely different; but, such are the peculiar customs of this people, that it is by no means impossible, indeed is far within the range of probability, that the slave of whom I have spoken, may yet be elevated to a sphere more exalted than that of the wealthy Armenian. If every good has its attendant evil, every evil has its antidote; and in this clime of despotism the fetters of slavery are less galling than in our own more favoured land. The slave has here a voice in his own disposal, and his consent is necessary to make a transfer legal. The female slave therefore may, and doubtless does reject the ill-favoured or tyrannical, and yield her assent only to the comely or the wealthy purchaser, perchance a bey or a pasha, and become the favourite wife of a future governor of an extensive province.

On the Asiatic shore of the Bosporus, is a rude granite column upon a projecting point, which indicates the last encampment of ten thousand Russians, on the march to succour Constantinople, when threatened by Mehemet Ali, of Egypt.

When Constantinople was rescued from the clutches of this rebellious pasha by the interposition of the European powers, he

came as a tributary to render homage to the sultan. While here, he selected, as the site of the palace he was required to build, the promontory immediately below and in full sight of the one upon which the Russian column is erected, as if to intimate to posterity that if the Russians came thus far, *he* had preceded them, and that it was the fear of *him* that brought them.

These are ominous signs, the first especially; for, if a Russian army can so speedily and unexpectedly (it came without a summons) reach the environs of Constantinople, what is to prevent the same rapid movement of a hostile and yet more powerful force? Of their danger the Turks are well aware, but instead of preparing to resist, in the spirit of fatalism they supinely await the dread event. There is a tradition among them that they are to be driven from Europe by a light-haired race from the north, and their fears have settled upon the Russians. The prediction will work its own accomplishment: the unhappy presentiment of the Turk, (for the feeling amounts to such,) will be more than embattled hosts against him, and the dispassionate observer can already predict not only his expulsion from Europe, but the downfall of the Ottoman empire. The handwriting is on the wall, and it needs not a Daniel to interpret it. Under present auspices, this country must before long attain her destiny; and her decline and fall will add another to the many lessons of experience, to instruct future generations and furnish additional proof of the perishable nature of all human institutions. Could Christianity but shed its benign influence over this misguided people, their national existence might be prolonged, and the sad catastrophe averted. One crying evil pervades the land, and while it exists, there can be no hope.

In this country, from the hovel to the palace, woman is in a state of *domestic servitude.* It is unnecessary to dwell upon the degradation of the female sex here, in India, and among all barbarous nations. The fact is clearly established, that everywhere, in all nations and among every people beyond the pale of Christianity, woman is deplorably debased. Christianity has ever expressed the deepest solicitude for the female sex; for the

inordinate authority of man over woman, or the undue subjection of the female to the male, tends to the debasement of the morals of each. Woman, even when invested with the plenitude of her rights and mistress of her own actions, is but too often the feeble victim of the seducements which surround her. How utterly helpless is she, therefore, when her will is not her own! The very idea of resistance vanishes, vice becomes a seeming duty, and man, gradually debased by the facility with which his irregular appetites are indulged, plunges into the lowest depths of sensuality. Woman, whose influence over the heart of man is irresistible, whenever she is debased, revisits her corruption upon man: and thus this pervading influence of the sexes over each other, by a species of mutual contamination, moves from generation to generation in one vicious circle, from which they can only be delivered by the supernatural and refining influence of Christianity.

Christianity acts first upon woman, because, from the gentleness and tractability of her nature, she is more susceptible of the influence of its law of purity and love; and when she is thus regenerated, who shall declare the extent of her chastening influence over the sons of the children of men? Under the elevating and benign influences of Christianity, she proceeds to subdue, to reform, to ennoble, and perfect everything around her; and, by this supernatural power, she so softens the affections and refines the feelings of the lord of creation, as to dispose him to prefer the purity and confidence of domestic love, to the selfish and utter isolation of a life of sensual indulgence.

But, alas! Christianity, all lovely and gentle as she is, can find no entrance here; for bigotry, with sneering lip and contracted brow, stands at the portal.

CHAPTER V.

CONSTANTINOPLE, AND VOYAGE TO SYRIA.

The application for a firman in behalf of a national expedition, being considered unusual, was referred by the Divan for the decision of the monarch, and I had, by appointment, an audience with the sultan. Accompanied by the Dragoman of our legation, I took a caique, and proceeded three miles up the Bosporus, to the palace of "Cherighan."

We landed at the palace stairs, and leaving our overshoes, which etiquette required us to bring, we ascended a broad and lofty flight of stairs, and passing through an ante-chamber, were ushered into a room which overlooked the Bosporus, and was occupied by Sheffie Bey, the chief and confidential secretary of the sultan. It was handsomely furnished, but no more.

With the secretary, was an Armenian, a great favourite of the monarch, and superintendent of the public works in and near Constantinople.

Shortly after we were seated, as many pipe-bearers as there were visiters entered the apartment, and, with heads bowed down and their left hands upon their breasts, presented each of us with a chibouque; then retiring backwards a few paces, dropped on one knee, and lifting the bowl of the pipe, placed a gilt or golden saucer (I could not tell which) beneath it.

I am not a smoker, and hold, with King James I., that

> "If there be any herb, in any place,
> Most opposite to God's herb of grace,"

it is tobacco; but as an opportunity of inhaling the odour of the weed of royalty might never again present itself, my inclinations jumped accordant with the rules of etiquette, and I puffed away with as much vivacity as any Turk.

In a short time the attendants reappeared, one of them bearing a golden salver, covered with a crimson cloth, gorgeously embroidered. The latter was presently withdrawn, and exhibited upon the massive piece of plate a number of tiny coffee-cups, set in stands or holders, in shape exactly like the egg-cups we use at home. The cups were of the choicest porcelain, most beautifully enamelled, and the holders were rich filagree gold, set with turquoise and emerald.

Again an attendant approached each of us, and in the same manner as before, presented a cup of coffee. Like the tobacco, it was flavoured with some aromatic substance, which rendered it delicious.

The empty cups and exhausted pipes were removed by the attendants, who, in all their approaches and retirings, were careful not to turn their backs upon us. Observing this, I began to distrust my ability to make a retrograde movement in a direct line, from the sublime presence into which I was about to be ushered.

One of the pashas had preceded me, and I was compelled to wait nearly half an hour. At length, we were summoned. Descending the flight of stairs, and resuming our overshoes, we were led across the court, into which, when passing in a caique a few days before, I had looked so eagerly. It is oblong, and contains about four acres, laid out in parterres and gravel walks, with many young and thrifty trees, and a great variety of plants: flowers there were few, for it was yet early in the season. In the centre, with a gravelled walk between, were two quadrangular, artificial ponds, in which a number of gold and silver fish were gambolling in security, protected as they were from the talons of the cormorant by nets drawn over a few feet above the surface of the water.

The fish sporting beneath, the bird of prey poised above, ready for a swoop through the first rent of the flimsy screen, seemed fitting emblems of the feeble Turk, and the vigorous and grasping Russian.

There was nothing imposing, but all was rich and in exquisite

taste. The bronze gates, with alternate gilt bars, which open on the Bosporus between the centre building and the northern wing, were exceedingly light and beautiful. A part of the court, most probably that appropriated to the harem, or apartments of the women, was screened off by a lofty railing of like material and construction.

We were led to the entrance of the southern wing, and again throwing off our overshoes, entered a lofty and spacious hall, matted throughout, with two broad flights of stairs ascending from the far extreme to an elevated platform or landing, whence, uniting in one, they issued upon the floor above.

On the right and left of the hall were doors opening into various apartments, and there were a number of officers and attendants on either side and stationed at intervals along the stairway, all preserving a silence the most profound.

The secretary, who had gone before, now approached and beckoned us to follow. But here an unexpected difficulty was presented. The chamberlain in waiting objected to my sword, and required that I should lay it aside. I replied that the audience was given to me as an officer of the United States; that the sword was part of my uniform, and that I could not dispense with it. My refusal met with the assurance that the etiquette of the court peremptorily required it. I asked if the custom had been *invariably* complied with, and inquired of the dragoman whether Mr. Carr, our minister, had, in conformity with it, ever attended an audience without his sword; but even as I spoke, my mind, without regard to precedent, had come to the alternative, no sword, no audience.

Whether the secretary had, during the discussion, referred the matter to a higher quarter, I could not tell; for my attention was so engrossed for some minutes, that I had not noticed him. He now came forward, however, and decided that I should retain the sword. At this, I truly rejoiced, for it would have been unpleasant to retire after having gone so far. It is due to Mr. Brown, the dragoman, to say that he sustained me.

The discussion at an end, we ascended the stairway, which

was covered with a good and comfortable but not a costly carpet, and passed into a room more handsomely furnished and more lofty, but in every other respect of the same dimensions as the one immediately below it. A rich carpet was upon the floor, a magnificent chandelier, all crystal and gold, was suspended from the ceiling, and costly divans and tables, with other articles of furniture, were interspersed about the room; but I had not time to note them, for on the left hung a gorgeous crimson velvet curtain, embroidered and fringed with gold, and towards it the secretary led the way. His countenance and his manner exhibited more awe than I had ever seen depicted in the human countenance. He seemed to hold his breath, and his step was so soft and stealthy that once or twice I stopped, under the impression that I had left him behind, but found him ever beside me. There were three of us in close proximity, and the stairway was lined with officers and attendants, but such was the death-like stillness that I could distinctly hear my own footfall, which, unaccustomed to palace regulations, fell with untutored republican firmness upon the royal floor. If it had been a wild beast slumbering in his lair that we were about to visit, there could not have been a silence more deeply hushed.

Fretted at such abject servility, I quickened my pace towards the curtain, when Sheffie Bey, rather gliding than stepping before me, cautiously and slowly raised a corner for me to pass. Wondering at his subdued and terror-stricken attitude, I stepped across the threshold, and felt without yet perceiving it, that I was in the presence of the Sultan.

The heavy folds of the window-curtains so obscured the light, that it seemed as if the day were drawing to a close instead of being at its high meridian.

As with the expanding pupil the eye took in surrounding objects, the apartment, its furniture and its royal tenant, presented a different scene from what, if left to itself, the imagination would have drawn.

The room, less spacious, but as lofty as the adjoining one, was furnished in the modern European style, and like a familiar thing,

a stove stood nearly in the centre. On a sofa, by a window, through which he might have looked upon us as we crossed the court, with a crimson tarbouch, its gold button and blue silk tassel on his head, a black kerchief around his neck, and attired in a blue military frock and pantaloons, and polished French boots upon his feet, the monarch sat, without any of the attributes of sovereignty about him.

A man, young in years, but evidently of impaired and delicate constitution, his wearied and spiritless air was unrelieved by any indication of intellectual energy. He eyed me fixedly as I advanced, and on him my gaze was no less intently riveted. As he smiled, I stopped, expecting that he was about to speak, but he motioned gently with his hand for me to approach yet nearer. Through the interpreter, he then bade me welcome, for which I expressed my acknowledgments.

The interview was not a protracted one. In the course of it, as requested by Mr. Carr, I presented him, in the name of the President of the United States, with some biographies and prints, illustrative of the character and habits of our North American Indians, the work of American artists. He looked at some of them, which were placed before him by an attendant, and said that he considered them as evidences of the advancement of the United States in civilization, and would treasure them as a souvenir of the good feeling of its government towards him. At the word "civilization," pronounced in French, I started: for it seemed singular, coming from the lips of a Turk, and applied to our country. I have since learned that he is but a student in French, and presume that, by the word "civilization," he meant the arts and sciences.

When about to take my leave, he renewed his welcome, and said that I had his full authority to see anything in Stambhol I might desire.

My feelings saddened as I looked upon the monarch, and I thought of Montezuma. Evidently, like a northern clime, his year of life had known two seasons only, and he had leaped at once from youth to imbecility. His smile was one of the sweetest

I had ever looked upon,—his voice among the most melodious I had ever heard; his manner was gentleness itself, and everything about him bespoke a kind and amiable disposition. He is said to be very affectionate, to his mother in especial, and is generous to the extreme of prodigality. But there is that indescribably sad expression in his countenance, which is thought to indicate an early death. A presentiment of the kind, mingled perhaps with a boding fear of the overthrow of his country, seems to pervade and depress his spirits. In truth, like Damocles, this descendant of the Caliphs sits beneath a suspended fate. Through him, the souls of the mighty monarchs who have gone before, seem to brood over the impending fate of an empire which once extended from the Atlantic to the Ganges, from the Caucasus to the Indian Ocean.

Returning from the room of audience to that of the secretary, we were again presented with pipes, and, instead of coffee, sherbet was handed round; a drink so cool and so delicious, that my unaccustomed palate treasures its flavour in grateful remembrance.

One circumstance occurred to me as singular. Neither on the palace stairs, nor in the court, nor in the palace itself, did I see a single soldier; and, but for the obsequiousness of the Sultan's officers and attendants, I might have fancied myself on a visit to a wealthy private gentleman.

One trifling circumstance will serve to show the generous disposition of the Sultan. On the day succeeding the audience, he expressed to the Grand Vizier his desire to tender me a present, such as became a sovereign to make, and directed him to ascertain in what mode it would be most acceptable to myself. When his wish was made known to me, I replied, that I felt sufficiently compensated by an audience, which, I had been given to understand, was never before granted to any but officers of the highest rank; and that, even if the constitution of my country did not prohibit it, I could not accept a remuneration for an act of duty that had been rendered so grateful in its performance. I further added, that more than any present, I would prize the granting of the firman.

My instructions from the Navy Department, when I left the United States, were to apply, through our Minister at the Ottoman Porte, for a firman, authorising our party to pass through the Turkish dominions, in Syria, to the Dead Sea. It was asked as a matter of respect to the Turkish government, and to procure facilities from its officials, when in their vicinities. As to protection against the Arabs, it could afford none whatever; for Eastern travellers well know that, ten miles east of a line drawn from Jerusalem to Nabulus, the tribes roam uncontrolled, and rob and murder with impunity. Mr. Carr fully carried out the instructions he had received, and did his best to procure the firman.

Before leaving Constantinople, in part with the officers, in part alone, I visited some of the principal mosques, the seraglio, the arsenal, and the fleet, and found that the permission given by the Sultan was not an idle compliment.

Whether the efforts made by the late Sultan, and now making by Abd' al Medjid, his successor, will result in the civilization or the downfall of the Ottoman Empire, remains to be determined. From the eager employment of Franks, the introduction of foreign machinery, and the adoption of improved modes of cultivating the land, the present Sultan gives the strongest assurance of his anxiety to promote the welfare of his people. But the very attempt at a higher development of national character, has led to greater military weakness; and the fable of the Wolf and the Lamb, its actors represented by Russia and the Porte, will ere long be transferred to the page of history.

All good Muslims go to mosque on Fridays, besides praying five times a day. The Sultan goes every Friday to a different mosque, which is known beforehand. For the purpose of seeing his sublime majesty in public, we went to the convent of dervishes in Pera, where he was to be present. A small collection of the faithful had assembled in the court of the mosque, together with many Greeks, Armenians, and Franks. The convent is a mean-looking building, in the rear of a street of small shops and cafés, with a neglected burial-ground in front and beside it. None but the faithful being permitted to enter a mosque when the

Sultan attends, we were constrained to remain in the court, taking our position near the entrance. At the gate of the adjoining grave-yard were a number of females, forming a separate crowd of yashmaks and gay-coloured ferajes, with black eyes and henna-stained fingers.

Here it is not the custom for men to notice, much less speak to, women in public; and yet the constant presence of Turkish women in the streets and public places, shows that they are prone to gad about as much as some of their Christian sisters in America; but, if restricted from the use of that little instrument the tongue, they contrive to do considerable execution with their almond-shaped eyes, inky eyebrows, and half-an-alabaster nose, which is all that is exposed to view. There was one little beauty in a pink feraje, with an extremely thin yashmak, who might have been an Odalisque. The rest of them looked like ghouls risen from the graves, upon the tomb-stones of which they were standing. Most of the grave-yards we had seen were much neglected, many of them like open commons, the turbaned tomb-stones standing at all angles, and frequently trampled under foot.

It was amusing to observe the crowd, waiting, like ourselves, in patient expectation of seeing the grand seignor. All the soldiers and more respectable people wore pantaloons and the red tarbouch; but the lower classes, ever the first to move in, and the last to be benefited by a revolution, adhered to the turban and capacious breeks, with a kind of tunic to match. The dervishes were moving about with serious faces, wearing faded brown or green cloaks, with felt hats, shaped like inverted funnels, upon their heads.

We waited for some time; and, as the Sultan was about to appear in public, our imagination, pictured the magnificent entrée of a great Ottoman monarch,—troops of warriors, splendidly caparisoned horses, and all the barbaric pomp of an oriental court,—when a low murmur indicated that the cortêge was approaching.

First came, walking backwards, the Imaum of the dervishes, in a high green felt hat, swinging a censer filled with burning incense, and followed by a grave, melancholy-looking young man,

with a rather scanty black beard, the red tarbouch upon his head, and wearing a blue military frock-coat and fawn-coloured pantaloons; the coat fringed or laced, with a standing collar, — fawn-coloured gloves upon his hands, and a short blue cloak thrown lightly over his shoulders. It was the Sultan! He was followed, in single file, by six or eight persons, attired in blue, some wearing swords, and others carrying small leather portfueilles, richly embossed with gold.

Contrary to expectation, the Sultan had dismounted outside, and his gait, as he passed us, was feeble and almost tottering. Indeed, most of the Turks walk what is termed "parrot-toed," — very much like our Indians. Ascending a covered stairway to an upper gallery, with windows towards the court, he approached one of them, and looked intently down upon us; but our interpreter imprudently exclaiming, "Voila le Sultan! le Sultan!" he turned slowly away, we presume, to his devotions.

Without the court were his horses; splendid steeds, caparisoned in richly-embroidered, but chaste saddle-cloths, which, as well as the reins and the pommels of the saddles, were studded with precious stones; the head-pieces were embossed gold, and the frontlets glittered with gems.

The Sultan's figure was light, and apparently feeble. I thought so when I saw him before, in a semi-obscure apartment, and his appearance now confirmed the impression. The expression of his features at the moment of passing, was that of profound melancholy. Like the Mexican prince, of whom he so much reminded me, his mind may be overshadowed by the general and spreading opinion, that the Ottoman rule upon the European side of Turkey is drawing to a close. This impression has become so prevalent, that hundreds, when they die, direct their remains to be interred on the Asiatic side of the Bosporus. It is sad to think that, from the destruction of the Janissaries by Mahmoud to the present time, the very advancement of the Turks in civilization should increase the weakness, and precipitate the dismemberment, if not the downfall, of the empire!

It was a singular scene! A few ragged Turks in the old tur-

ban, the only relic of the past; the mixture of European costumes and the red tarbouch; a company of Christian officers, from a far-off land; the mild-looking young Sultan, so humble! so gentle! with so little parade! so different from his haughty Osmanlie ancestors! And then there was the back-ground of veiled women — the ghouls peeping out of the grave-yard.

Tuesday, Feb. 29. Visited the same convent to witness an exhibition of dancing dervishes. Casting off our overshoes, and passing through the door, beside which sentries were stationed, we took our places within a railing, which ran around the circular floor of the mosque. There was a similar gallery above. Some twenty dirty-looking dervishes, in faded brown and green cloaks, with white felt conical hats upon their heads, were prostrate around the circle, while the Imaum, the same who had preceded the Sultan, chanted a prayer before the mihrab on the eastern side. There was music from the gallery, plaintive, yet barbarous, mingled with the occasional tap of a drum.

After repeated prostrations, at a signal, the Imaum led the way, in a slow march, round the apartment. As each one passed the mihrab, he bowed three times, gracefully, without stopping, or turning his back towards the holy place. After marching round three times, making the same reverence, they halted with their faces inwards, and the Imaum resumed his seat upon a rug before the mihrab. The others, all barefooted, crossing their feet one after the other, in slow succession, began to twirl around, keeping admirable time to the music; and when all in motion, looked like so many teetotums spinning. The word spinning conveys a better idea than turning; for they seemed to move about without the slightest effort, and their flowing garments, flying out in extended circles below, gave the movement a most graceful appearance. As the music became louder and faster, they spun round with increasing rapidity, until the eye became dizzy with looking upon them. At a tap of the drum, they stopped simultaneously, with no perspiration upon the forehead, and neither frenzy nor fatigue expressed in the eye. They were

of all ages, from the old Imaum, with the benevolent features, to a boy of sixteen, whose melancholy face excited interest. Indeed, they all had an air of sadness and profound resignation; nothing ferocious, nothing sinister, nothing fanatical. Renewing the march, and repeating the prostrations, the exercises continued about an hour, and concluded as they began. The audience either stood erect, or sat upon the floor, and preserved deep silence. The whole affair did not strike us in the ridiculous light we had anticipated. Indeed, some of the customs of Christianity are equally absurd. The religious sentiment is the same all over the world, and must find expression. Humanity rejoices, when such expression, harmless in itself, as in the present instance, neither assails the opinions nor the rights of others. Such is the necessity of religion for the support of all human institutions, that any form of worship, however false and corrupt, is preferable to the atrocious enormities which follow in the train of absolute impiety.

The religious sentiment of Turkey, misled and faint as it is, is the best protection it possesses against such debaucheries as the Saturnalia of Rome or the utter debasements of the Parisian worship of the Goddess of Reason.

March 1. Impatient about the firman, Mr. Carr addressed a note to the minister of foreign affairs upon the subject. In reply, the latter gave the assurance that there would be no difficulty, but that on the contrary the Sultan was anxious to promote our views.

Tuesday, March 6. Received the long-expected firman from the Grand Vizier. It was addressed to the Pashas of Saida and Jerusalem, the two highest dignitaries in Syria. It was briefly couched. The following is a literal translation:

"Governors of Saida and Jerusalem!—Captain Lynch, of the American Navy, being desirous of examining the Dead Sea (Bahr Lût), his legation has asked for him, from all our authorities, all due aid and assistance.

"You will, therefore, on the receipt of this present order, give

him and his companions, seventeen in number, all due aid and co-operation in his explorations.

"Protect, therefore, and treat him with a regard due to the friendship existing between the American Government and that of the Sublime Porte.

(Signed) "MUSTAFA RESCHID PASHA,
"*Grand Vizier.*

"MUSTAFA PASHA, *Governor of Saida.*
"ZARIF PASHA, *Governor of Jerusalem.*
"STAMBOHL, March 6, 1848."

In half an hour after the receipt of the firman, I was on board the French steamer "Hellespont," the rest of the party having preceded me.

Spent the night on the Sea of Marmara. Passed the next day in sweeping down the Hellespont, and skirting the Phrygian coast, and, on the morning of the 9th, rejoined the Supply.

Friday, March 10. Sailed from Smyrna for the coast of Syria, and passed through the straits of Spalmatori and Scio, and by the island of Nicaria (ancient Icaria), named after him whose waxen pinions so signally failed him.

Monday, March 13. The wind hauled to the southward and eastward, and freshened to a gale—a genuine levanter. The gale increasing, we were compelled to bear up, and run for a lee. Scudded through the dark night, and in the morning anchored in the bay of Scio.

In the afternoon, the weather partially moderating, visited the shore. From the ship, we had enjoyed a view of rich orchards and green fields; but, on landing, we found ourselves amid a scene of desolation—an entire city, with all its environs, laid in ruins by the ruthless Turks, during that darkest hour of Turkish history, the massacre of Scio. Invited into one of the dwellings, we tasted some Scian wine, and at the same time caught a glimpse of a pair of lustrous eyes peering at us from above:—the wine was light in colour, and, to our tastes, unpalatable; but the eyes were magnificent. The Greek costume differs little from the

Turkish, in the capital. The tarbouch is higher; the shakshen (petticoat-trowsers) shorter, with leggings beneath. The Greeks are more vivacious than the Turks, but much less respected in the Levant.

We rode into the country. Our steeds were donkeys—our saddles made of wood! It was literally riding on a rail. What a contrast between the luxuriant vegetation, the bounty of nature, and the devastation of man! Nearly every house was unroofed and in ruins—not one in ten inhabited, although surrounded with thick groves of orange trees loaded with the weight of their golden fruit.

March 14. Weighed anchor and again endeavoured to pass through the Icarian Sea; but encountering another gale, were compelled to bear away for Scala Nouva, on the coast of Asia Minor, not far from the ruins of ancient Ephesus. While weather-bound, we availed ourselves of the opportunity to visit the ruins about ten miles distant. There are no trees and very few bushes on the face of this old country, but the mountain slopes and the valleys are enamelled with thousands of beautiful flowers, among which the most conspicuous, from its brilliant colour, is the purple anemone (anemone coronaria), one of the lavenders, and known to the ancient Greeks.

Passing in view of the cave of the Seven Sleepers, we explored the ruins of the temple of Diana, and of the great church of St. John, the first of the seven churches of Asia. Over the massive portal of the last were originally fine basso-relievos, now all removed but one. From a cleft in the wall a tree shoots up and partly shades the portal within. It is the beautiful emblem of faith, springing from and surviving the ruins of its earthly temple.

Sailing thence, the wind was light, and we advanced slowly.

Sunday, March 19. Read prayers in the Forni passage, between Samos and Icaria, in sight of "the island which is called Patmos." Samos, the birth-place of Pythagoras and of one of the Sibyls, as well as Chios and Mitylene, were visited by St. Paul. At night, observed the eclipse of the moon by the chronometer.

March 20. All day in sight of Patmos, where St. John wrote the Apocalypse. How grateful, yet how awe-inspiring, would be a visit to the cave where the scribe of the Almighty dwelt!

Patmos is a small, rocky isle, with not a tree visible upon it, like most of the islands we have seen. There is little cultivation, although a considerable hamlet is seen clustering on the hill-side, while a castellated building crowns the summit. It is said that the inhabitants are supported, almost entirely, by the proceeds of the sponge fisheries along its rocky shores.

March 21. The wind strong, but adverse—freshened to a gale. We were now under the lee of Cos, where, as well as at Cyprus and Tyre, the god Phœbus was worshipped. This island was also visited by St. Paul on his way to Rhodes. 10 P. M. A fair wind, and a lunar rainbow! Bore away under full sail, leaving Candia broad upon our weather-quarter, and the sandy coast of Asia Minor, glittering in the moonlight, on our lee.

With a flowing sheet, we sailed past Rhodes and Cyprus,—the first famed for its brazen colossus, which no longer spans the entrance to the harbour.

Saturday, March 25. This morning the mountains of Lebanon are before us—their shadows resting upon the sea, while their summits are wreathed in a mist, made refulgent by the rays of the yet invisible sun. Brilliant as the bow of promise, the many-coloured mist rests like a gemmed tiara upon the brow of the lofty mountain. Like the glorious sunset on the eve of our departure, I hail this as an auspicious omen.

CHAPTER VI.

BEÏRÛT TO DEPARTURE FROM ST. JEAN D'ACRE.

March 25. At 8 A. M. anchored off the town of Beïrût, and I went on shore to call upon the Pasha, who is also a Mushir, which, next to the sovereignty, is the highest rank in the Ottoman empire.

The Rev. Eli Smith, of the American Presbyterian mission, although in ill health, exerted himself in our behalf, and to him we were indebted for securing the services of an intelligent young Syrian, named Ameuny, for our dragoman or interpreter. I also engaged an Arab, named Mŭstafa, as cook. The other gentlemen of the mission rendered us all the assistance in their power, and cheered us with cordial good wishes for our success.

We received here two pocket chronometers forwarded by Dent from London; and I had the satisfaction of engaging Dr. Anderson, of New York, as physician and geologist, while we should be descending the Jordan, and exploring the Dead Sea.

An English party having been recently attacked in attempting to descend the Jordan, the tribes might yet be in an exasperated state, and in the event of gun-shot wounds, surgical aid would be indispensable. Lieutenant Molyneux, R. N., the commander of that party, having, like Costigan, the only man who preceded him, perished of fever caught on the Dead Sea, I felt it a duty to secure the valuable services of Dr. Anderson. I directed him to proceed across the country, to make a geological reconnoissance, and to join us, if he could, on the route from Acre to Tiberias.

Our consul, Mr. Chasseaud, was indefatigable in his efforts to facilitate us; and notwithstanding the weather was tempestuous, with incessant rain, we were ready at the expiration of the first

twenty-four hours. H. B. M. Consul-General, Colonel Rose, was kind and obliging. Besides partaking of his hospitality, I was indebted to him for a letter to Mr. Finn, H. B. M. Consul at Jerusalem,—rendered the more acceptable as our country has no representative there.

Beïrût is a Franco-Syrian town, with a proportionate number of Turkish officials. The costumes of the east and of the west are singularly blended, but the races remain distinct, separated by difference of complexion and of faith. The most striking peculiarity of dress we saw, was the tantûr, or horn, worn mostly by the wives of the mountaineers. It was from fourteen inches to two feet long, three to four inches wide at the base, and about one inch at the top. It is made of tin, silver, or gold, according to the circumstances of the wearer, and is sometimes studded with precious stones. From the summit depends a veil, which falls upon the breast, and, at will, conceals the features. It is frequently drawn aside, sufficiently to leave one eye exposed,—in that respect resembling the mode of the women of Lima. It is worn only by married women, or by unmarried ones of the highest rank, and once assumed, is borne for life. Although the temple may throb, and the brain be racked with fever, it cannot be laid aside. Put on with the bridal-robe, it does not give place to the shroud. The custom of wearing it, is derived from the Druses, but it is also worn by the Maronites. Its origin is unknown; but it is supposed to have some reference to the words, "the horns of the righteous shall be exalted," and other like passages of Scripture.

The illimitable sea was upon one side, the lofty barrier of the Lebanon on the other, with a highly-cultivated plain, all verdure and bloom, between them. But so indispensably necessary did I deem it to reach the Jordan before the existing flood subsided, that no time was allowed to note the beauties of the surrounding scene. It seemed better to descend the river with a rush, than slowly drag the boats over mud-flats, sand-banks and ridges of rock.

Monday, March 27. At night, got under way; but the wind

failing, and a heavy sea tumbling in, we were compelled to anchor again.

Tuesday, 28. A. M. The wind light, and adverse, — employed in packing instruments, and making all ready for disembarkation. 3 P. M. Sailed with a fine breeze from the north-west. At midnight, having passed Sidon and Tyre, and hove to off the White Cape ("Album Promontorium" of the Romans, and "Ras-el-Abaid" of the Syrians), the north extreme of the bay of Acre.

At daylight filled away, and the wind blowing fresh, sailed past the town of St. Jean d'Acre, its battlements frowning in the distance, and anchored under mount Carmel, before the walled village of Haifa.

With great difficulty I landed through the surf, in company with our dragoman and our vice-consul at Acre, who had come with us from Beïrût. We were in danger of perishing, and only rescued by the Arab fishermen who came to our assistance. They are bold and dexterous swimmers, as much at home in the water as the natives of the Sandwich Islands.

The increasing surf preventing further communication with the ship, we proceeded first to Haifa and thence to the convent for a bed, for in the miserable village there was no accommodation. The first thing in Syria which strikes a visitor from the western world, is the absence of forest trees. Except the orchards, the mountains and the plains are unrelieved surfaces of dull brown and green. No towering oak, no symmetrical poplar, relieves the monotony of the scene. The sun must surely be the monarch of this clime, for, outside the flat, mud-roofed, cube-like houses, there is no shelter from his fiery beams.

The road to the convent led for a short distance through an extensive olive orchard, and thence up the mountain by a gentle ascent. On the plain, and the mountain side, were flowers and fragrant shrubs, — the asphodel, the pheasant's eye, and Egyptian clover. The convent stands on the bold brow of a promontory, the terminus of a mountain range 1200 feet high, bounding the vale of Esdraelon on the south-west. The view from the summit is fine. Beneath is a narrow but luxuriant plain, upon which, it

is said, once stood the city of Porphyræa.[1] Sweeping inland, north and south, from Apollonia in one direction to Tyre in another, with Acre in the near perspective, are the hills of Samaria and Galilee, enclosing the lovely vale of Sharon and the great battle-field of nations, the valley of Esdraelon; while to the west lies the broad expanse of the Mediterranean. But the eye of faith viewed a more interesting and impressive sight; for it was here, perhaps upon the very spot where I stood, that Elijah built his altar, and "the fire of the Lord fell and consumed the burnt sacrifice, and the wood and the stones and the dust, and licked up the water that was in the trench."

Friday, March 31. Wind changed off shore with a smooth sea. Sent to Acre for horses, and hoisted out the two "Fannies" and landed them with our effects. Pitched our tents for the first time, upon the beach, without the walls of Haifa. A grave-yard behind, an old grotto-looking well (then dry) on one side, and a carob tree on the other. This tree very much resembles an apple tree, and bears an edible bean, somewhat like the catalpa, which, in times of scarcity, is eaten by the poor. It is supposed to be the "husk" spoken of in the beautiful and touching parable of the prodigal son. The fruit is called by the Christians, "St. John's bread," and the tree, which is an evergreen, "the locust tree," from the belief that its fruit is the locust eaten with wild honey by St. John in the desert. For the first time, perhaps, without the consular precincts, the American flag has been raised in Palestine. May it be the harbinger of regeneration to a now hapless people!

We were surrounded by a crowd of curious Arabs, of all ages and conditions, — their costumes picturesque and dirty. The rabble already began to show their thievish propensities by stealing the little copper chains of our thole-pins. They thought that they were gold. Great fun to our sailors putting together the carriages, which with the harness were made in New York, for the transportation of the boats. The men were full of jokes and merriment, at beginning camp life. Mûstafa, the cook, prepared our first tea in Palestine.

[1] The true site of Porphyræa is said to be near Sidon.

We had two tents made of American canvass. They were circular, so constructed that the boats' masts answered as tent-poles to them. The officers occupied the small and the men the large one. We had each, officers and men, a piece of India-rubber cloth, two yards long, to sleep on, and a blanket or comforter to cover us.

Night came, and the sentries were posted. The stars were exceedingly brilliant; the air clear and cool — almost too cool, — and the surf beat in melancholy cadence, interrupted only by the distant cry of jackals in the mountains

Saturday, April 1. A day of tribulation. A little past midnight, the tinkling of bells announced the arrival of our horses, followed soon after by a screaming conversation in Arabic between the dragoman (interpreter) within our tent and the chief of the muleteers outside. Our sleeping was excessively uncomfortable, — what from the cold, and the stones on the ground, and the novelty, we scarce slept a wink. Some began to think that it was not a "party of pleasure," as an illiberal print had termed it.

With the first ray of light, we saw that our Arab steeds were most miserable galled jades, and upon trial entirely unused to draught. It was ludicrous to see how loosely the harness we had brought hung about their meagre frames. On trial, as an exhibition of discontent, there was first a general plunge, and then a very intelligible equine protest of rearing and kicking. After infinite trouble, and shifting the harness to more than a dozen horses, we found four that would draw, *when once started.* But the load was evidently too much for them. We then chartered an Arab boat, to convey the boat's-sails, and heavier articles, across the bay to Acre. Still, the horses could not, or would not, budge; so that we were compelled to relaunch the boats, and send them to the ship, which had sailed over, and was then blazing away, returning a salute of the town. With a sailor mounted on each of the trucks, the horses were at length made to draw them, by dint of severe beating. The road along the beach was as firm and hard as a floor. About half a mile from our camping-place, a branch of the Valley of Esdraelon opened on the

right, drained by the "Nahr Mukutta" (the river of the ford), the Kishon of Scripture, in which Sisera and his host were drowned, after their defeat by Deborah and Barak, at the foot of Mount Tabor.

> "The river of Kishon swept them away:
> That ancient river, — the river of Kishon."

It was to the brink of this brook that the 450 prophets of Baal were brought from Mount Carmel, and put to death by order of Elijah. The half-frightened horses dashed into the stream, which they crossed without difficulty, it being only about eighteen inches deep, and as many yards across. Onward we went, occasionally coming to a dead halt, rendering necessary, renewed applications of the cudgel, — for lighter instruments of persuasion were of no avail.

The road ran along the beach, — in fact, the beach was the road, curving gently towards the north, and eventually to the west. Passing the wrecks of several vessels, buried in the sand, about six miles from the Kishon, we came to the river Namàanè (Belus), nearly twice as deep and as wide again as the first. Pliny says, that near this river some shipwrecked Phœnician sailors discovered the mode of making glass, by observing the alkali of the dried sea-weed they burned, to unite with the fused silex of the shore. Thence, the beach sweeps out into a low projecting promonotory, on which stands "Akka," the "St. Jean d'Acre" of the Crusades, and the "Ptolemais" of the New Testament.

Akka has been esteemed the key of all Syria; and Napoleon, when he saw it, exclaimed, "On that little town hangs the destiny of the East." It checked *him*, however, in his victorious career, and *he*, who had never known a reverse, recoiled before it. But an English fleet, a few years since, proved that it was not impregnable, and its walls and bastions are yet in a dilapidated state, but they are now being thoroughly repaired and strengthened.

It being necessary to see the consul and the governor, I preceded the party to the town. At the outer gate of this fortified stronghold, two or three soldiers were standing, and there was a

guard-room just within it. I made my way, as well as I could, to the house of our consul, to which the stars and stripes occasionally beckoned me, as, from time to time, I caught a glimpse of them floating above a lofty turret.

Riding through a mass of masonry, with every conceivable name in the science of fortification, — through tortuous, ill-paved streets, and narrow bazaars and covered ways, I found myself at the bottom of a cul-de-sac. Dismounting before a low gateway, flanked by a gallery of blank walls, ascending a stone stairway, and passing through courts and ruined buildings, I reached the consul's house, and was in a few moments seated on his divan.

Had I not been in so much anxiety about our operations, the whole scene upon my entrance into St. Jean d'Acre would have been exceedingly interesting. It is the strangest-looking place in the world, besides its being so renowned from the days of chivalry to the English bombardment. Perhaps no other town in the world could have stood the hurtling of the iron hail-storm as well. In some places, but comparatively few in number, there were chasms, showing where a cannon-shot had passed; in others, the shot had formed a lodgment, and remained a fixture; and in others, again, had only made an indentation and fallen to the ground.

A short distance within the gate was a narrow bazaar, roughly paved, about two hundred yards in length, with small open shops, or booths on each side. They only exhibited the common necessaries of life for sale. A short distance farther, opposite to the inner wall, was a line of workshops, mostly occupied by shoemakers. These, with a few feluccas in the harbour, presented the only indications of commerce.

In the walls of our consul's castellated, bomb-proof house several shot were lodged; and in the court I stumbled over broken bomb-shells and fragments of masonry. From the flat terrace-roof we looked down upon numberless neighbours; women with golden hair-ornaments and ragged trousers, — for they were too large to be called pantalettes. There was, on an adjoining terrace, a young girl with a glorious profusion of curling tresses, which, from beneath a golden net-work on her head,

fell gracefully down upon her dumpy form. Besides a boddice, or spencer, she wore a short pelisse and full trousers, which, to say the least, were rather the worse for wear. I should have admired the dark, wild-looking eye and the luxuriant hair, had it not been whispered to me that in the morning her beautiful head was seen undergoing a more critical examination than would be necessary with one of our fair countrywomen.

The consul having prepared himself, we went forth to seek the governor, who, with his suite, had gone outside the walls. There were few people in the streets, but I noticed that the turban was more generally worn than in Beïrût, Smyrna, or Constantinople. Civilization has scarce landed upon these shores; and in Syria, we may look for more unadulterated specimens of the Muslim character than in the capital of the empire.

We found the governor just without the gate, seated in the most democratic manner, against the side of a thatched hut, a café, I believe. He received us courteously, and we were immediately provided with seats. It was a singular place of audience, and contrasted strangely with the sparkling gem upon the finger of the governor, the amber mouth-piece of his chibouque encircled with diamonds, and the rich dresses and jewel-hilted swords of some of his officers: but I liked it; there was no pretension or parade, and it looked like business; moreover, it had a republican air about it that was gratifying.

In this public place, the parley was held, and the horses that he had furnished were abused in unmeasured terms. His officers and ourselves were seated upon stools and benches; the attendants were in front, and the rabble stood around and listened to the talk.

Sa'id Bey, the governor, is about forty-five years of age. He is a Syrian by birth, an Egyptian by descent, and almost a mulatto in complexion. He was dressed in plain blue pantaloons and a long blue surtout, and wore a black beard and the red tarbouch. His countenance indicated cunning, if not treachery.

In brief terms, I told the governor how worthless the horses proved which he had sent. He professed his deep sorrow, but

asked what could he do, for there were none better to be procured. I then proposed oxen, but he stated that it was then the height of seed-time, and that without great injury to the husbandmen he could not take them. This was confirmed by our dragoman and a Syrian gentleman, a Christian convert, educated by the missionaries at Beïrût. Of course, although burning with anxiety to proceed, I would not consent to profit by an act of injustice. From the governor's manner, however, I suspected that he was coveting a bribe, and determined to disappoint him.

Assuming a high stand, I told him that we were there not as common travellers, but sent by a great country, and with the sanction of his own government:—that I called upon him to provide us with the means of transportation, for which we would pay liberally, but not extravagantly. That his own sovereign had expressed an interest in our labours, and if we were not assisted I would take good care that the odium of failure should rest upon the shoulders of Sa'id Bey, Governor of Acre. By this time a great concourse of people had gathered around, and he said that he would see what could be done, and let me know in the course of the evening.

The "Supply" had in the mean time weighed anchor, and stood close in shore to land the provisions and things sent back in the morning. The boats of the expedition had also arrived, as well as the trucks drawn round the beach. The Governor and his officers came to look at them, followed by nearly the whole population of the town. Such a mob! such clamour and confusion! I requested the governor to employ the police to clear a place for us to pitch our tents upon the beach. He did so immediately, but it was of no avail; for the crowd, driven off at one moment, returned the next, more clamorous than before: and he confessed that he had not power to prevent the townspeople from gratifying their laudable desire for information,—not to speak of acquisition, for they are notorious thieves. But for its vexation, the scene would have been very amusing. In the midst of this Arab crowd were many women, with coloured trousers and long coarse white veils; and some stood in the grave-yard

immediately behind us, in dresses, veils and all, of common check, black and white.

Finding it utterly impossible to land our effects and encamp in this place, we returned and pitched our tents on the southern bank of the Belus. But even here the crowd followed us, evincing a curiosity only to be equalled by our own brethren of the eastern states. Since the authorities could not or would not protect us, we determined to take the law into our own hands and protect ourselves, and accordingly posted sentinels with fixed bayonets to keep off the crowd. Jack did it effectually, and the flanks of two or three bore witness to the "capable impressure" of the pointed steel; after which we were no more molested. We then hauled the boats up to a small green spot beside the river, and a short distance from the sea. Behind us was the great plain of Acre. While thus engaged, some Arab fellahin (peasants) passed us, their appearance wild, and their complexions of the negro tint.

With conflicting emotions we saw the "Supply," under all sail, stand out to sea. Shall any of us live to tread again her clean, familiar deck? What matters it! We are in the hands of God, and, fall early, or fall late, we fall only with his consent.

Late in the afternoon, I received an invitation from Sa'id Bey to come to the palace. Ascending a broad flight of steps, and crossing a large paved court, I was ushered into an oblong apartment simply furnished, with the divan at the farther end. I was invited to take the corner seat, among Turks the place of honour. Immediately on my right, was the Cadi, or Judge, a venerable and self-righteous looking old gentleman, in a rich blue cashmere cloak, trimmed with fur. On *his* right sat the Governor. Around the room were many officers, and there were a number of attendants passing to and fro, bearing pipes and coffee to every new comer. But, what specially attracted my attention, was a magnificent savage, enveloped in a scarlet cloth pelisse, richly embroidered with gold. He was the handsomest, and I soon thought also, the most graceful being I had ever seen. His complexion was of a rich, mellow, indescribable olive tint, and his hair a

glossy black; his teeth were regular, and of the whitest ivory; and the glance of his eye was keen at times, but generally soft and lustrous. With the tarbouch upon his head, which he seemed to wear uneasily, he reclined, rather than sat, upon the opposite side of the divan, while his hand played in unconscious familiarity with the hilt of his yataghan. He looked like one who would be

> "Steel amid the din of arms,
> And wax when with the fair."

Just as we were seated, an old marabout entered the room, and, without saluting any one, squatted upon the floor and commenced chanting verses from the Koran. He had a faded brown cloak drawn around him, and a dingy, conical, felt hat, such as is worn by the dervishes, upon his head. His whole person and attire were exceedingly filthy, and his countenance unprepossessing in the extreme. The company sat in silence while he continued chanting verse after verse in a louder and yet louder tone. At length the governor asked the cause of the interruption, but received no answer; save, that the last word of the verse, which the madman or impostor was reciting at the moment, was sent forth with a yell, and the next verse commenced in a shriller key than the one which had preceded it. The whole council (for such I suppose it may be called) now resigned itself to the infliction; and, with a ludicrous, apologetic air, the Cadi whispered to me, "It is a santon!"

At length the marabout paused for want of breath, and the Governor repeated his former question. This time there was a reply, and a very intelligible one. He wanted charity. A sum of money was directed to be given to him, and he took his departure. Surely this is a singular country! Such an importunate mode of begging I never saw before, although I have been in Sicily. I relate the circumstance, with no farther comment, exactly as it occurred.

When we were again quiet, the Governor stated that since he had parted with me he had received the most alarming intelligence of the hostile spirit of the Arab tribes bordering on the Jordan,

and pointed to the savage chief as his authority. He named him 'Akīl Aga el Hasseé, a great border Sheikh of the Arabs. The Governor proceeded to say that the "most excellent Sheikh" had just come in from the Ghor, where the tribes were up in arms, at war among themselves, and pillaging and maltreating all who fell into their hands. He was, therefore, of opinion that we could not proceed in safety with less than one hundred soldiers to guard us; and said that if I would agree to pay twenty thousand piastres (about eight hundred dollars), he would procure means for the transportation of the boats, and guaranty us from molestation.

He could not look me in the face when he made this proposition, and it immediately occurred to me that the Bedawy Sheikh had been brought in as a bugbear to intimidate me into terms. This idea strengthened with reflection, until I had reached a state of mind exactly the reverse of what Sa'id Bey anticipated.

The discussion lasted for some time, the Governor, the Cadi, the Sheikh, and others, whose names and rank I did not know, urging me to accept the offer. This I positively declined, stating that I was not authorized, and if I were, would scorn to buy protection: that if draught horses could be procured or oxen furnished, I would pay fairly for them and for a few soldiers to act as scouts; but that we were well armed and able to protect ourselves.

Finally, the Governor finding that I would not embrace his terms, although he mitigated his demand, urged me to abandon the enterprise. To this, I replied that we were ordered to explore the Dead Sea, and were determined to obey.

He then advised me, with much earnestness, to go by the way of Jerusalem. As he was too ignorant to understand the geographical difficulties of that route, I merely answered that we had set our faces towards the Sea of Galilee, and were not disposed to look back.

The Sheikh here said that the Bedawin of the Ghor would eat us up. My reply was that they would find us difficult of digestion; but, as he might have some influence with the tribes, I added that we would much prefer going peaceably, paying fairly

for all services rendered and provisions supplied; but go at all hazards we were resolutely determined. Here the conference ended, it having been prolonged by the necessity of conversing through an interpreter, which had, however, this advantage, that it gave me full time to take notes.

Without the court, I overtook the Sheikh, who had preceded me, and asked him many questions about the tribes on the Jordan. In the course of the conversation I showed him my sword and revolver—the former with pistol-barrels attached near the hilt. He examined them closely, and remarked that they were the "devil's invention." I then told him that we were fifteen in number, and besides several of those swords and revolvers, had one large gun (a blunderbuss), a rifle, fourteen carbines with bayonets, and twelve bowie-knife pistols, and asked him if he did not think we could descend the Jordan. His reply was, "You will, if any one can." After parting from him, I learned that he was last year at the head of several tribes in rebellion against the Turkish government, and that, unable to subdue him, he had been bought in by a commission, corresponding to that of colonel of the irregular Arabs (very irregular!), and a pelisse of honour. It was the one he wore.

It was now near nightfall, and the gates were closed; I therefore accompanied our consul to his house for refreshment and a bed, for I had eaten nothing since early in the morning. It was a great disappointment to me to be separated from the camp; for, apart from the wish to participate in its hardships, I was anxious to consult with Mr. Dale, who had cheered me throughout the day by his zealous co-operation.

On reaching the consul's, I was told that some American travellers from Nazareth had called to see me in my absence, and were to be found at the Franciscan Convent. Thither, I immediately hastened, anxious alike to greet a countryman, and to gather information, for Nazareth was nearly in our contemplated line of route.

They proved to be Major Smith, of the United States' Engineers, an esteemed acquaintance, and Mr. Sargent, of New York,

together with an English gentleman. Their account confirmed the rumour of the disturbed state of the country, and they had themselves been attacked two nights before, at the foot of Mount Tabor.

I can give a very inadequate idea of my feelings. To turn back, was out of the question; and my soul revolted at the thought of bribing Sa'id Bey, even if I had been authorized to spend money for such a purpose. I felt sure that he had exaggerated in his statement, and yet the attack on our countrymen, so far this side of the Jordan, staggered me. Had my own life been the only one at stake, I should have been comparatively reckless; but those only can realize my anxiety, who have themselves felt responsibility for the lives of others.

From all the information I could procure of the Arab character, I had arrived at the conclusion, that it would tend more to gain their good-will if we threw ourselves among them without an escort, than if we were accompanied by a strong armed force. In my first interview with Sa'id Bey, therefore, I only asked for ten horsemen, to act as videttes, which, under the impression that they would be insufficient, he so long hesitated to grant, that I withdrew the application, and resolved to proceed without them. He afterwards pressed me to take them, and, calling upon me at the consul's, offered to furnish them free of cost; but I was steadfast in refusal.

The attack upon our countrymen, however, indicated danger of collision at the very outset, and I determined to be prepared for it.

On leaving the "Supply," I had placed a sum of money in charge of Lieutenant-Commanding Pennock, with the request, that he would, in person, deliver it to H. B. M. Consul at Jerusalem. Partly for that purpose, and in part to make some simultaneous barometrical observations, he had sailed for Jaffa, which is about thirty miles distant from the Holy City. To him, therefore, I despatched a messenger, asking him to call upon the Pasha, and request a small body of soldiers to be sent to meet us at Tiberias, or on the Jordan. This precaution taken, my mind was

at ease, and, indeed, I was half ashamed of the previous misgivings; for, from the first, I had *felt* that we should succeed.

In the camp, the day passed quietly. At one time, there was a perfect fête around it,—pedlers, fruit-sellers, and a musician with a bagpipe, who seemed to sing extemporaneously, like the Bulgarian at San Stefano. At length, the crowd becoming troublesome, a space was cleared around the encampment, and lines of demarcation drawn. Crosses were then made at the corners, which, from some superstitious feeling, the people were afraid to pass.

In the evening, at the consul's, we received many visitors, scarce any three of whom were seated, or rather squatted, in the same attitude. There is no part of the world I have ever visited, where the lines of social distinction are more strictly drawn than here. In the present instance, the highest in rank were squatted, à-la-Turque, upon the divan, with their heels beneath them. The next in grade were a little more upright, in a half kneeling attitude; the third, between a sitting posture and a genuflexion, knelt with one leg, while they sat upon the other; and the fourth, and lowest I saw, knelt obsequiously, as if at their devotions. It was amusing to see the shifting of postures on the entrance of a visitor of a higher rank than any present;—when the squatters, drawing themselves up, assumed a more reverential attitude, and they who had been supported on one knee, found it necessary to rest upon two.

I was particularly struck with these evolutions, on the entrance of a fine old man, an Arab nobleman, called Sherîf Hazzâ of Mecca, the thirty-third lineal descendant of the Prophet. He was about fifty years of age, of a dark Egyptian complexion, small stature, and intelligent features. His father and elder brother had been Sherîfs, or governors of Mecca until the latter was deposed by Mehemet Ali. He was dressed in a spencer and capacious trousers of fine olive cloth. His appearance was very prepossessing, and he evinced much enlightened curiosity with regard to our country and its institutions. We were told that from his descent he was held in great veneration by the Arabs;

and I observed that every Muhammedan who came in, first approached him and kissed his hand with an air of profound respect. He was as communicative about his own affairs as he was inquisitive with respect to us and our country. Finding that he was now doing nothing, but inactively awaiting the decision of a lawsuit, I suddenly proposed that he should accompany us. At first, he smiled, as if the proposition were an absurd one; but when I explained to him that, instead of a party of private individuals, we were commissioned officers and seamen, sent from a far distant but powerful country to solve a scientific question, he became interested. I further added that, with us, I knew he believed in the writings of Moses; and that, with solutions of scientific questions, we hoped to convince the incredulous that Moses was a true prophet. He listened eagerly, and after some farther conversation, rose abruptly, and saying that he would very soon give me an answer, took his departure. I had, in the mean time, become very anxious; for it seemed as if he had been providentially thrown in our way. But it was necessary to conceal my feelings, for it is the nature of this people to rise in their demands in exact proportion to the anxiety you express; and even if he were to consent to accompany us, he might rate his services at an exorbitant price.

Sooner even than, in my impatience, I had anticipated, he returned and accepted the invitation, shaming my previous fears of imposition by saying that he left the remuneration of his services entirely to my own appraisement. He also brought a message from 'Akīl, the handsome savage, to the purport, that Sa'id Bey was a humbug, and had been endeavouring to frighten me. Sherîf thought it not unlikely that the Sheikh might also be induced to accompany us, if the negotiation were conducted with secresy.

This Sa'id Bey is an instance of the vicissitudes of fortune in the Ottoman empire. Holding an office under Ibrahim Pasha, when the Egyptians were in possession of the country, he was detected in malpractices; and at the restoration of Acre to the Turks, was found in chains, condemned to labour for life. He now walks as master through the streets which he formerly swept.

When the company had retired, the Consul, "on hospitable cares intent," being a bachelor, superintended in person the preparation of my bed. Among other things, he had spread upon it a silk sheet, soft and fine enough to deck the artificial figure of a city belle, and sufficiently large for the ensign of a sloop-of-war.

Although the couch was luxurious, the balm of refreshing sleep was long denied, and for hours I laid awake and restless, for I was not alone — the fleas were multitudinous and remorseless.

There seemed to be no alternative but to take the boats apart and transport them across in sections, unless camels could be made to draw in harness, and I determined to try the experiment. During the night I suffered dreadfully from the nightmare, and the suffocating monster was a camel.

Sunday, April 3. In the afternoon, when the religious exercises of the day were over, the experiment of substituting camels for draught horses was tried *and proved successful;* and my heart throbbed with gratitude as the huge animals, three to each, marched off with the trucks, the boats upon them, with perfect ease.

The harness, all too short, presented a fit-out more grotesque even than that of a diligence in an interior province of France; but, with alterations, it answered the purpose, and we felt independent of Sa'id Bey; for camels, at least, could be had in abundance. Determined, therefore, not again to have recouse to the grasping Governor, I contracted with Sa'id Mŭstafa, a resident of the town, for the necessary number of camels and horses.

The first attempt to draw the trucks by camels was a novel sight, witnessed by an eager crowd of people. The successful result taught them the existence of an unknown accomplishment in that patient and powerful animal, which they had before thought fit only to plod along with its heavy load upon its back.

The qualities of the camel, uncouth and clumsy as he is, are scarcely appreciated in the East, or he would be more carefully tended. It is a matter of surprise that the Romans never employed them. Porus used them against Alexander, and the Parthians against Crassus; but, I believe, as far as history tells, the Romans

never employed them in warfare, nor in any manner as means of transportation.

Monday, April 3. We were moving betimes, packing up and waiting for the camels to transport our baggage, the boats having gone ahead. After many vexatious delays, made a start at 2.30 P. M., but soon after two of the camels breaking down, we were compelled to camp again.

CHAPTER VII.

FROM ST. JEAN D'ACRE TO DEPARTURE FROM THE SEA OF GALILEE.

Tuesday, April 4. The daylight brought disappointment. As Sa'id Mŭstafa was not to be found, I sent the dragoman to our Consul, requesting him to call immediately upon the Governor, and demand more camels; for I had determined that I would not, under any circumstances, again present myself before him. By 8 o'clock, two additional camels arrived, and, at 9 o'clock, we took up the line of march after the boats, — sixteen horses, eleven loaded camels, and a mule.

As we were starting, Sa'id Bey had the effrontery to send to me for a letter, stating that he had rendered all the services I had required. I sent him word in reply, that he had done nothing to assist us; and that of his gross attempt at extortion, I had apprised our government at home, our minister at Constantinople, and his superior, the Mushir, at Beïrût.

Following the beach to within two hundred yards of the town, we turned off to the east, and skirted a hill, whence, on the left,

we saw an aqueduct, and the garden of Abdallah Pasha, — a grove in the midst of a verdant, but treeless plain. Pursuing the same route taken the evening before, we crossed the great plain of Acre, enamelled with flowers, and struck into a rolling country of gentle undulations. Besides the profusion of flowers, a stunted tree was here and there presented.

The evening before, I had promised 'Akīl to visit him in his mountain fortress, if I could, and one of his followers now presenting himself as a guide, we rode ahead of the caravan. The village of Abelin was soon visible on the summit of a high hill, rising abruptly from the southern slope of the plain. To the east and south-east, in the far distance, were two other villages; all else was a nearly level plain, with broken ground in front. Riding over the shoulder of the hill, we opened upon the head of a ravine, — wide at first, but narrowing to a gorge as it descended, and swept around the bases of the hills. Crowning the one opposite, Abelin looked like an inaccessible strong-hold. I had been cautioned to be upon my guard; knew nothing of 'Akīl, except that he was a daring Arab chief; had never before seen my guide, and was uncertain whether he would prove treacherous or faithful. I had accepted the invitation, for I was anxious to prevail on 'Akīl also to accompany us, and I felt that it would not answer to show distrust. To guard against the worst, however, I gave to a fellah, whom we met, a note for Mr. Dale, directing him, if I should not return, to push on without delay, and accomplish the objects of the expedition.

The steep, rugged path had never before been trodden by any other than an Arab horse; and but that the one upon which I rode was singularly surefooted, he would have often stumbled and dislodged me, for I could not guide him, so much were my senses engrossed by the extraordinary variety, fragrance, and beauty of innumerable plants and flowers.

The village, perched upon the loftiest peak, commands an extensive view from the "Album Promontorium" to the Convent of Mount Carmel. But, if the situation be beautiful, the place

itself is indescribably poor and filthy. The houses, built of uncemented stones, are mostly one story high, and have flat, mud roofs; and without, and encircling the whole, is a row of small, dome-roofed hovels, made entirely of mud, and used for baking bread; all enveloped in a most offensive atmosphere, tainted by the odour of the fuel,—the dried excrement of camels. There appeared to be as many as one of those little hovels to each dwelling.

After having been detained in an open court until I became impatient, I was ushered into a large room, open in front, with a mud floor and smoke-stained rafters, covered with twigs. A collection of smouldering embers was in the centre, stuck into which, a small and exceedingly dirty brass coffee-pot stood simmering; and seated at the farther end, a short distance from it, were the Sherîf, 'Akîl, and a number of Arabs, armed to the teeth. I had parted with the first, at a late hour the previous evening, when he started for Haifa, ten miles in another direction; and how he could have come here, puzzled me.

For some moments, scarce a word was said; and, from inability to speak the language, I could not break the awkward silence, having left the interpreter with the train, where his services were necessary.

There were some twelve or fifteen present. Look where I would, their keen, black eyes were riveted upon me; and wherever I turned my eyes, theirs immediately followed in the same direction. I turned to Sherîf, in the hope that he would say something; but, lost in thought, he seemed to be studying the geological structure of the lighted coal on the bowl of his narghilé. To 'Akîl I made a friendly sign of recognition, which was returned without rudeness, but without cordiality. My position began to be irksome, rendered not the less so, from the circumstance that the pipe and the cup of coffee, the invariable marks of welcome beneath an Arab roof, were withheld.

I do not know when I have so earnestly longed for a cup of coffee; for, apart from the danger inferred to myself, its not being

tendered, seemed an ominous sign for the expedition. The whole business looked like a snare.

While these thoughts were passing through my mind, a few words had been exchanged between the leaders and their followers,—mostly brief questions and monosyllabic replies, the last almost invariably the Arabic negative, "Lah!"

Presently one of the questions elicited quite a warm discussion, during which I sat entirely unnoticed, except that occasionally one of the speakers looked towards me, when his example was followed by the whole assembly. There was an evident air of constraint; I had been received with bare civility, and they seemed undecided what measures to pursue. There were evidently conflicting opinions.

Fretted with impatience, and perhaps more nervous than I should have been, I thoughtlessly looked at my watch. There was an instant pause in the conversation, and while Sherîf asked to see it, they all crowded eagerly round. It was no curiosity to him, but most of those present examined it earnestly, like so many wild Indians for the first time beholding a mirror. I took as much time as possible to exhibit the works, and when they would look no longer, drew my sword, and glad to feel it in my grasp, pointed out to them the peculiar construction of the handle. They examined it as closely as they could, for, unlike the watch, I would not part with it; when, just as their curiosity was becoming sated, a cheering sound struck upon my ear. A single glance satisfied me that I was not mistaken, and springing to my feet, I stretched out one hand for the watch, while with the other I pointed to the foot of the hill, and cried out "djemmell!" Djemmell! djemmell! (camel! camel!) was echoed by many voices, for the caravan was in sight, and from that moment there was a marked change in their manner towards me.

I cannot venture to say that there was an intention to rob me, for, despite appearances, I can hardly think so. It may be that the omission of the chibouque and coffee made an undue impression upon me, and my ignorance of Arab habits did the rest. Perhaps, too, I was rendered morbidly suspicious by the con-

sciousness of having a large sum of money about me. If a robbery were contemplated, I came upon them, perhaps, before their plans were matured; or the arrival of Sherîf, who could have preceded me but a short time, might have disconcerted them. At all events, I now felt safe, for the gaping mouth of the blunderbuss and the sheen of the carbines borne by my companions proved ample protectors.

Notwithstanding the awkwardness of our recent position towards each other, I felt no hesitation in entering into an agreement with 'Akīl on the same terms as with the Sherîf. Our language was that of signs, fully understood by both parties.

According to the Arab code of morals, 'Akīl would have been perfectly justified in robbing me prior to a contract; but to do so afterwards would have been the height of dishonour.

On leaving Acre, our course was first east, then gradually round to south, when, crossing a ridge by Abelin, which shuts in the plain, the train entered a narrow gorge, and came to the Blowing Valley or valley of the winds, with forests of white oak on the flanks of the hills.

I rejoined the caravan as it passed by Abelin, leaving our allies to follow. They were to bring ten spears, and formidable ones they proved to be. The road becoming difficult for the carriages, we moved slowly, and our Arab scouts soon overtook us. They had all assumed the garb of the desert, and each, with a flowing dark āba (cloak) on, and the yellow koofeeyeh upon his head, bound round with a cord of camel's hair, dyed black; and bearing a spear eighteen feet in length, some of them tufted with ostrich feathers, looked the wild and savage warrior.

In the middle of Blowing Valley we came to a halt, three miles from Abelin. It was yet early, 3 P. M.; but the great regulator of every thing connected with life and motion in the East is water. We had passed a well about a mile back, and between us and the next one was a narrow defile, presenting great obstructions to the passage of the boats. We therefore pitched our tents upon a gently sloping esplanade, and our Bedawin friends camped over-against us.

It was a picturesque spot; on the left of our tents, which faced the south, were the trucks with the two boats, forming a kind of entrenchment; behind these were about thirty camels and all our horses. From the boats, and in front of our white tents, the American flag was flying; and just beyond, an officer and two sailors, with carbines, had mounted guard, with the loaded blunderbuss between them. The tent of our allies was a blue one; and the horses tethered near, and tufted spears in front, together with their striking costume, varied and enlivened the scene.

Towards each end of the valley, about half a mile from the camp, one of the Arab horsemen was stationed, and cutting sharp against the sky, 'Akīl was upon the crest of the hill in our rear, taking a reconnoissance. They promised to make admirable videttes, and we had reason to rejoice at having secured them. One brought us a sheep, which we shared between the camps; and Mr. Dale and myself went over and took a tiny cup of coffee with them. We took solar and barometrical observations; and at night, observed Polaris.

We this day passed through the narrow tract on the coast of Syria, which was never subdued by the Israelites, and through the narrowest part of the land of the tribe of Asser into that of Zebulon.

It was a brilliant night, but we had reason to consider that the place was appropriately named. About midnight, the wind blew with great violence, and we were compelled to turn out, and assist the officer of the watch in securing the instruments.

Wednesday, April 5. We were early on the move; the sun was rising beautifully over the eastern hills; the camels were straying about upon their slopes, and the flags and ostrich feathers were drooping with the mist. Called all hands, breakfasted, struck tents, hitched camels, and started. The carriages, with the boats, were drawn by three camels each, two abreast, and one as leader, with twelve spare ones, to relieve every half hour. Our party numbered sixteen in all, including dragoman and cook, with eleven camels, laden with baggage, tents, instruments, &c.;

and fifteen Bedawin, all well mounted, the followers and servants of the Sherîf of Mecca and Sheikh 'Akīl Aga el Hasseé.

Our course was at first down a narrow gorge. Through this we found it impossible to drag the boats; and therefore, deploying to the left, we drew them to the summit of an overhanging hill, and there, taking the camels out, lowered them down by hand. It was an arduous and, at times, a seemingly impracticable undertaking, but by perseverance we succeeded.

Passing along this ravine, in a south-easterly direction, for three-quarters of a mile, the boats rattling and tumbling along, drawn by the powerful camel trains, we came upon a branch of the great plain of Buttauf. The metal boats, with the flags flying, mounted on carriages drawn by huge camels, ourselves, the mounted sailors in single file, the loaded camels, the Sherîf and Sheikh, with their tufted spears and followers, presented a glorious sight. It looked like a triumphal march.

The sun was curtained, but not screened from the sight by the ascending vapour, and the soft wind was wooing nature to assume her green and fragrant livery. The young grain, vivified by the heat, sprang up in prolific growth, and carpeted the earth with its refreshing verdure. The green turf of the uncultivated patches of the plain, and the verdant slopes of the hills, were literally enamelled with the white and crimson aster, the pale asphodel, the scarlet anemone, the blue and purple convolvulus, the cyclæmen with flowers so much resembling the eglantine rose, and many others of brilliant hues and fragrant odours; while, interspersed here and there upon the hill-sides, were clumps of trees, on the branches of which the birds were singing, in the soft light of an early spring morning,—enjoying, like ourselves, the balmy air and smiling landscape. It was an exquisite scene, and elevated the mind, while it gratified the love of the beautiful. Surely,

> "There lives and works
> A soul in all things, and that soul is God."

In front was a level lake of verdure and cultivation, and down the gentle slope, towards its basin, our long cavalcade wended

its way,—officers and men in single file, their arms glittering in the sunlight, and the wild Arabs, with their lances pointed at every angle, some of them mounted upon the best blood of Arabia, and seeming impatient at the slowness of the march.

Winding around a green hill, tufted with oak, we reached Khan el Dielil, now in ruins, with an excellent well beside it. A few hundred yards beyond, we came to a shallow pond of water, the collection of winter rains, where we stopped to water the caravan. Here we took chronometer observations,—having to remove some distance in consequence of the vibration caused by the movement of the animals.

From this ruined khan, across the plain, bearing south, cresting a lofty hill, was the castle of Sefûriceh (Sepphoris), the Dio Cesarea of the Romans. It was, for some time, the successful rival of Tiberias; and, in the 12th century, was the great rendezvous of the Crusaders before the fatal battle of Hattin. There is a tradition among the Arabs, that Moses married and lived there twenty years. Thence south-east, over a hill, lay *Nazareth*, but three hours distant from us. How we grieved that our duties prevented us from visiting a place which, with Bethlehem and Calvary, the scenes of the birth, the residence, and the death of the Redeemer, are of most intense interest to the Christian! To the left, almost due east, one hour distant, lay Cana of Galilee.

Who has not, in thought, accompanied the Saviour to that marriage-feast, and thanked him from his heart, that he should have gladdened with his presence the fleeting festivities of sinful man, and that his first miracle should have been, to all succeeding generations, a lesson of filial love!

Each day, some of the Sherîf's or the Sheikh's followers brought us a sheep or a lamb as a present, for which, however, they expected, and always received, a fair equivalent. In doing so, they placed a quiet trust in Providence with regard to the payment, for which they never asked. Where the value of things is so well ascertained as among this primitive people, how much better is this plan, than a higgling bargain!

Starting again,—our route was E. N. E. along the plain; our

Arabs caracoling their steeds, and giving us specimens of their beautiful horsemanship,—plunging about, and twirling their long spears, and suddenly couching them in full career, as they charged upon each other. It was like the game of the djerid, of which we had all read so often, except that, instead of the short blunted spear of pastime, these were the sharp-pointed instruments of war. The old Sherîf was mounted upon a splendid grey stallion, worth many thousand piastres, and wore himself a rich olive cloth cloak, embroidered with silver. Beautiful bay mares were ridden by the Sheikh and his followers, among the last were two jet-black Nubians,—one of them of Herculean frame, disfigured by several scars.

Coming to a broken and rocky country, we encountered much difficulty with the boats. At first it seemed impossible that the ponderous carriages could be drawn over such a rugged road. The word road means, in that country, a mule-track. Wheel-carriages had never crossed it before. In their invasion of Syria, the French transported their guns and gun-carriages (the latter taken apart) on the backs of camels, over the lofty ridges, and mounted them again upon the plain.

At length, making a detour to the right, breaking off a projecting crag here, and filling up a hollow there, we got the boats over the first ridge. It was shortly, however, succeeded by another and another, and the trains were obliged to abandon the road altogether. Winding along the flanks of several hills, we came upon an elevated plain of cultivated fields. Turning then more to the north, and skirting a ridge of rocky limestone, we gradually ascended a slope covered with olive orchards. Presently we came in sight of Turân, an Arab village.

In our acceptation of the word, a village means a number of scattered peasant dwellings, but here it is a stronghold of the agricultural population. Since leaving Acre, we had not seen a single permanent habitation without these walled villages. Turân is quite a fortification. It is small; the houses are built of uncut and uncemented stone, with flat mud roofs, and do not exceed one story in height. Just beyond the village, over the brow of the

hill, we pitched our tents upon the outskirts of an olive orchard. In the plain, immediately beneath, was fought a decisive battle between the Syrians and the French. Mount Tabor bore S. S. W. We were in the lands assigned to the tribe of Zebulon.

By invitation, I accompanied Sherîf and 'Akīl into the village, and smoked a pipe and drank coffee with its Sheikh, who wore the graceful and becoming turban. But for his costume, he would, in our country, pass for a genteel negro, of the cross between the mulatto and the black. In order to economize time and provisions, and to prepare us for the endurance of future privations, I had from the first restricted the whole party to two meals a day—one early in the morning, before starting, the other when we had camped for the night. There was not an objection nor a murmur.

While at supper, Dr. Anderson joined us. On his way to Acre, he had, from a height, seen the expedition moving along the plain. He described it as a beautiful sight.

The Sheikh of the village punctually returned my visit, and was duly regaled with pipes and coffee. He seemed to prefer our tobacco to his own. In the evening we went down to the tent of our Arabs, pitched a short distance from us, with their horses tethered near and neighing loudly. What a patriarchal scene! Seated upon their mats and cushions within, we looked out upon the fire, around which were gathered groups of this wild people, who continually reminded us of our Indians. Then came their supper, consisting of a whole sheep entombed in rice, which they pitched into without knives or forks, in the most amusing manner. There was an Arab bard withal, who twanged away upon his instrument, and sung or rather chanted mysterious Arabic poetry.

We had ascended upwards of 1500 feet, which, better than any description, will give an idea of the steepness, but not of the ruggedness, of the road since we left the plain of Acre. To-morrow we may reach the Sea of Galilee! Inshallah! God willing.

Thursday, April 6. A beautiful morning, wind light, and weather very pleasant. As, in consequence of great impediments,

the boats moved but slowly, we started with them at an early hour. At 11, the camp followed us. Nothing could be more picturesque than the appearance of our cavaliers of the desert, when they rejoined us, mounted upon their spirited steeds, with their long spears and flowing garments of every variety of hue.

At first our course was east, down a long descent, and thence over the undulations of a rolling plain, to a large artificial reservoir, with an area of about three acres, partly filled with rain-water, where we stopped fifteen minutes. Our friends, who had preceded us, and Sherîf, with one of his followers, had gone to perform their devotions in a field apart.

While at this fountain, wishing to take some bearings, one of our swarthy friends, in the most graceful and polite manner, held one of our horses, and otherwise assisted us. Thus far these terrible Arabs conducted themselves like gentlemen. In courtesy, civilization could not improve them.

Thence we passed immediately north of the village of Lubieh, differing only in its less conspicuous position, from Turân and Abelin. Our Arabs rode into the village, but I declined the invitation to coffee, and kept on with the cavalcade.

Since leaving the olive-groves of Turân we had not seen a tree nor a bush, except on the hill-sides of Lubieh; yet the whole surface of the valley was dotted with unenclosed fields of growing grain, and carpeted with green.

We continued rising, until we opened on our right, a magnificent crater-like series of slopes, with a bare glimpse of the Sea of Galilee and the mountains of Bashan beyond. These slopes are fields of grain, divided into rectangles of different hues and different stages of growth. Besides these, were patches of flowers scattered about, — here the scarlet anemone, there the blue convolvulus: — but the gentle and luxuriant slopes looked like mosaic, with a prevailing purple tinge, the hue of the thorny shrub merar. On our route thus far the prevailing rock has been limestone, but since leaving Lubieh we have met several nodules of quartz, and much trap, totally destitute of minerals. The prevailing flower is the convolvulus, from the root of which scam-

mony is said to be extracted. Ragged peasants were ploughing in the fields; but not a tree, not a house. Mount Tabor now bore due south.

Pursuing the route along the northern ridge of this valley, in half an hour we came to a fountain, on the high road from Jerusalem to Damascus. Some Christian pilgrims, from the latter to the former place, were seated around it; their tired horses, with drooping heads, waiting their turn to drink. Soon after leaving them, a small party passed us; among them, the only pretty female we had seen in Palestine: a young Syrian girl, with smooth bronze skin and regular features.

Unable to restrain my impatience, I now rode ahead with Mŭstafa, and soon saw below, far down the green sloping chasm, the Sea of Galilee, basking in the sunlight! Like a mirror it lay embosomed in its rounded and beautiful, but treeless hills. How dear to the Christian are the memories of that lake! The lake of the New Testament! Blessed beyond the nature of its element, it has borne the Son of God upon its surface. Its cliffs first echoed the glad tidings of salvation, and from its villages the first of the apostles were gathered to the ministry. Its placid water and its shelving beach; the ruined cities once crowded with men, and the everlasting hills, the handiwork of God, — all identify and attest the wonderful miracles that were here performed — miracles, the least of which was a crowning act of mercy of an Incarnate God towards his sinful and erring creatures.

The roadside and the uncultivated slopes of the hills were full of flowers, and abounded with singing birds — and there lay the holy lake, consecrated by the presence of the Redeemer! How could travellers describe the scenery of this lake as tame and uninteresting? It far exceeded my most sanguine expectations, and I could scarce realize that I looked upon it. Near by was the field, where, according to tradition, the disciples plucked the ears of corn upon the Sabbath. Yet nearer was the spot where the Saviour fed the famishing multitude; and to the left the Mount of Beatitudes, where he preached his wonderful compend of wisdom and love. At its foot, as if to show how little man re-

gards the precepts of his Maker, was fought one of the most dreadful battles recorded on the page of history.

I neither put implicit faith in, nor yet, in a cavilling spirit, question the localities of these traditions. Unhappy is that man, who, instead of being impressed with awe, or exultant with the thought that he is permitted to look upon such scenes, withholds his homage, and stifles every grateful aspiration with querulous questionings of exact identities. Away with such hard-hearted scepticism — so nearly allied to infidelity! What matters it whether in this field or an adjoining one — on this mount, or another more or less contiguous to it, the Saviour exhorted, blessed, or fed his followers? The very stones, each a sermon, cry shame upon such a captious spirit — a spirit too often indulged, not in the sincerity of unbelief, but to parade historical or biblical lore.

Not a tree! not a shrub! nothing but green grain, grass and flowers, yet acres of bright verdure. Far up on a mountain-top stands conspicuous the "holy city" of Safed, the ancient Japhet. Nearer is the well into which Joseph was put by his brethren. Beyond the lake and over the mountains, rise majestic in the clear sky the snowy peaks of Mount Hermon. We descended the steep hill towards the lake. How in the world are the boats ever to be got down this rocky and precipitous path, where we are compelled to alight and lead our horses? From Acre to this place, we have dragged the boats along a series of valleys and ridges, but from hence there is a sheer descent. This difficulty overcome, we shall only have our own familiar element to deal with. We must, therefore, brace ourselves to a desperate effort.

The boats could come no farther than the fountain, where the trains stopped for the night. Along the elevated plain the trap formation made its appearance in scattered fragments, covering the brown soil; large boulders then succeeded, and on the shore enormous masses crop-out in the ravines. Winding down the rugged road, we descended to the city, seated on the margin of the lake. Tiberias (Tūbariyeh) is a walled town of some magni-

tude, but in ruins, from the earthquake which, in 1837, destroyed so many of its inhabitants. Not a house nor a tree without the walls, yet cultivated fields behind and beside them. On an esplanade, a short distance from the dismantled gateway, were the tents of a small detachment of Turkish soldiers.

Safed and Tiberias, Jerusalem and Hebron, are the four holy cities of the Jews in Palestine. Tiberias is held in peculiar veneration by the Jews, for here they believe that Jacob resided, and it is situated on the shores of the lake whence they hope that the Messiah will arise.

Turning to the south, leaving behind us a beautiful concave slope, consecrated by tradition for the miraculous draught of fishes, we entered the northern half-ruined portal of the town.

We were yet in the land of Zebulon; on the opposite side of the lake are the lands of the tribe of Manasseh.

It being necessary to adjust and fix the rate of our instruments, we rented part of a house in town, — many being proffered for our accommodation, — indicative alike of the hospitality of the people and the unprosperous condition of the place. We had letters to the chief rabbi of the Jews, who came to meet us, and escorted us through a labyrinth of streets to the house of Heim Weisman, a brother Israelite.

Sherîf and 'Akîl turned up as if by magic. Here they were before us, although they stopped at Lubiyeh, and we did not see them pass us on the road. Nothing but their kind feelings towards us could have induced them to enter the house of a Jew. They received three rabbis, who came to see us, with much respect, and greeted their own Muslim visitors with the true oriental embrace. The governor, who was a relative of 'Akîl, was among the first who called.

There was no doubt of the high standing of Sherîf and his nephew, Sherîf Musaid, a much younger and very prepossessing Arab, who had recently joined us. The governor was a small intelligent Arab, with a dark Egyptian complexion. Our friends soon left us to quarter upon him.

Our sailors were delighted with the novelty of having a roof

above them, and we all felt relieved in no longer hearing the shrill and vociferous screams of the camel-drivers, — the noisiest of the children of men. *Our saloon* looked out upon the lake. It had mere apertures in its blank walls for doors and windows. A number of swallows, regardless of our presence, flitted in and out, busied in the construction of their nests amid the sustaining rafters of the mud roof. The windows might have been, but, from an error in its construction, the door could not be, closed. Our apartment, which was at once our parlour, eating-room, and chamber, was the rendezvous of all the curious.

We had fish, delicious fish from the lake, for our supper, which we ate in thankfulness, although we knew that we should pay for it in flesh, — for the king of the fleas, it is said, holds his court in Tiberias.

We were surrounded by a motley assembly of all classes, standing, sitting, or reclining in democratic disregard of all rank or distinction, and looking with amazement, not unmingled with mirth, at our strange and elaborate mode of eating.

Our instruments were uninjured, notwithstanding the ruggedness of the road, and we fitted them up in a separate room, preparatory to a series of observations; and then wearied, but gratified, laid down to sleep.

Friday, April 7. The beams of the rising sun, reflected from the lake, were dancing about on the walls of the apartment when we awoke. A light breeze ruffled its surface, which

"Broke into dimples, and laughed in the sun."

There was a silence of some moments, as we looked forth upon it, and the mind of each, no doubt, recurred to the time when an angry wind swept across, and the Apostle of wavering faith cried, "Lord, save me, or I perish!"

Our first thought was for the boats; but, notwithstanding the utmost exertions, they were only brought at sunset, to the brink of the high and precipitous range which overlooked the lake from the west.

In the course of the day, I returned the visit of the governor.

He received me in a large room, opening on a small court, with a divan in a recess opposite to the door.

Justice was administered with all the promptitude and simplicity of the East. On my way, I had been exasperated almost to the point of striking him, by a half-grown boy beating an elderly woman, who proved to be his mother. The latter made her complaint shortly after my entrance. The case was fairly but briefly examined by the governor in person, and in a few words the sentence was pronounced. From the countenance of the culprit, as he was led forth, I felt satisfied that he was on his way to a well-merited punishment.

Another woman complained that her husband had beaten her. In this, as in the previous case, the complainant directly addressed the governor. The husband seemed to be a man of influence, and the trial was somewhat protracted. The evidence was clear against him, however, and he was made publicly to kiss her forehead, where he had struck her.

A trifling circumstance will show in what thraldom the Jews are held. Our landlord, Heim Weisman, had been kind enough to show me the way to the governor's. On our entrance, he meekly sat down on the floor, some distance from the divan. After the sherbet was handed round to all, including many dirty Arabs, it was tendered to him. It was a rigid fast-day with his tribe, and he declined it. It was again offered, and again declined, when the attendant made some exclamation, which reached the ears of the governor, who thereupon turned abruptly round, and sharply called out, "Drink it." The poor Jew, agitated and trembling, carried it to his lips, where he held it for a moment, when, perceiving the attention of the governor to be diverted, he put down the untasted goblet.

On our return, Mr. Weisman led me to a vaulted chapel dedicated to St. Peter, built on the traditionary spot of one of the miracles of our Lord. Strange that a Jew should point out to a Christian the place where the Messiah, whom the first denies and the last believes in, established his church upon a rock!

The Jews here are divested of that spirit of trade which is

everywhere else their peculiar characteristic. Their sole occupation, we were told, is to pray and to read the Talmud. That book, Burckhardt says, declares that creation will return to primitive chaos if prayers are not addressed to the God of Israel at least twice a week in the four holy cities. Hence the Jews all over the world are liberal in their contributions.

Returned the visit of the Rabbis. They have two synagogues, the Sephardim and Askeniazim, but live harmoniously together. There are many Polish Jews, with light complexions, among them. They describe themselves as very poor, and maintained by the charitable contributions of Jews abroad, mostly in Europe. More meek, subdued, and unpretending men than these Rabbis I have never seen. The chief one illustrated the tyranny of the Turks by a recent circumstance. In consequence of the drought of the preceding year there had been a failure of the crops, and the Sultan, whose disposition is humane, ordered a large quantity of grain to be distributed among the fellahin for seed. The latter were accordingly called in;—to him whose portion was twenty okes[1] was given ten, and to him whose portion was ten, five okes were given,—*after* each had signed a paper acknowledging the receipt of the greater quantity. How admirably the scriptures portray the manners and customs of the east! Here is the verification of the parable of the unjust steward. It is true, that in this instance the decree was issued by the Turks—a comparatively modern people,—but it was carried into effect by the descendants of the ancient Gentile races of the country.

In the evening we visited several of the synagogues. It was impressive, yet melancholy to witness the fervid zeal of the worshippers. In gabardines, with broad and narrow phylacteries, some of them embroidered, the men were reading or rather chanting, or rather screaming and shouting the lamentations of Jeremias—all the time swaying their bodies to and fro with a regular and monotonous movement. There was an earnest expression of countenance that could not have been feigned. The tones of

[1] An oke is about two and three-quarter pounds.

the men were loud and almost querulous with complaint; while the women, who stood apart, were more hushed in their sorrow, and lowly wailed, moving the heart by their sincerity. In each synagogue was an octagon recess, where the Pentateuch and other sacred works were kept. Whatever they may be in worldly matters, the Jews are no hypocrites in the article of faith.

The females marry very early. There was one in the house, then eleven and a half years of age, who, we were assured, had been married eighteen months. Mr. Weisman pointed out another, a mere child in appearance, ten years of age, who had been two years married. It seems incredible. The unmarried wear the hair exposed, but the married women studiously conceal it. To make up for it, the heads of the latter were profusely ornamented with coins and gems and any quantity of another's hair, the prohibition only extending to their own. Their dress is a boddice, a short, narrow-skirted gown, and pantalettes gathered at the ankles. Unlike the Turkish and the Arab women, they sometimes wear stockings. The boddice is open in front, and the breasts are held, but not restrained, by loose open pockets of thin white gauze.

There are about three hundred families, or one thousand Jews, in this town. The sanhedrim consists of seventy rabbis, of whom thirty are natives and forty Franks, mostly from Poland, with a few from Spain. The rabbis stated that controversial matters of discipline among Jews, all over the world, are referred to this sanhedrim.

Besides the Jews, there are in Tiberias from three to four hundred Muslims and two or three Latins, from Nazareth.

P. M. Received an express with letters from Jerusalem. Among them is a firman, or buyuruldi, from the Pasha, which I transcribe as a curiosity:

"Translation of Buyuruldi,
from the Pasha of Jerusalem. 6 April, 1848.

"Observe what is written in this, all ye who stand and see it, by the Sheiks and Elders of the Arabs and keepers of the highways: let it be known to you openly, according to this Buyuruldi,

that fifteen of the honourable persons of the government of America desire to depart from this to the Sea of Lot and thereabouts, there to take boats and go down into the above-mentioned sea. And, accordingly, as it was necessary, we have drawn this, our Buyuruldi, to you; and it is necessary for you, O ye that are spoken to, that to the above persons, at their passing your districts, you do all that you can for their comfort, and let no one annoy them — but care and protection is required for them; and if they are in want of food or other things for price, or animals for hire, you are to supply them. And if God please, no more command is wanting; but to the persons that are here mentioned, by all means give comfort; and for this reason we have drawn for you this Buyuruldi from the divan of the honourable Jerusalem, Nablus, and Gaza. So by this ye may know, according to what is written, ye are not to do the contrary. Know and beware, and know according to what is herein, and avoid the contrary.

"Translated by Moses Tanoos,
British Consulate.
Jerusalem."

The express from Jerusalem was a Janissary, sent by the Pasha, with four soldiers. In the firm belief that we should not need them, I paid them and directed them to return. Our Bedawin friends served as videttes, to apprise us of danger. It was only ambuscades we feared.

Saturday, April 8. A beautiful, calm morning. Quiet as a sleeping infant, the lake laid in the lap of its lofty hills. Received an express from Acre, with letters. They brought intelligence of revolutions in Europe. Heaven speed the cause of freedom!

Took all hands up the mountain to bring the boats down. Many times we thought that, like the herd of swine, they would rush precipitately into the sea. Every one did his best, and at length success crowned our efforts. With their flags flying, we carried them triumphantly beyond the walls uninjured, and, amid a crowd of spectators, launched them upon the blue waters of the Sea of Galilee — the Arabs singing, clapping their hands to the time, and crying for backshish — but we neither shouted nor

cheered. From Christian lips it would have sounded like profanation. A look upon that consecrated lake ever brought to remembrance the words, "Peace! be still!" — which not only repressed all noisy exhibition, but soothed for a time all worldly care.

Buoyantly floated the two "Fannies," bearing the stars and stripes. Since the time of Josephus and the Romans, no vessel of any size has sailed upon this sea, and for many, many years, but a solitary keel has furrowed its surface.

Sunday, April 9. Another glorious morning. Rose early and went to the hot baths southward of the town, near the ruins of Emmaus, fitted up by Ibrahim Pasha when Syria was in possession of the Egyptians. The road runs along the sea-beach, upon which also the baths are situated. On the way we passed some prostrate columns, and broken arches, and vestiges of ruins half concealed beneath mounds of earth and rank vegetation. These are no doubt the ruins of the ancient city of Tiberias, the present site of the town being a more modern one. A short distance back, the rugged face of the brown mountains, with here and there a yawning cavern, overlooked the narrow plain and pellucid sea. Now and then a splash of the water indicated the gambollings of fish beneath the surface, while above, the fish-hawk sailed slowly along, ready for a swoop, and just out of gun-shot a flock of wild ducks were swimming about in conscious security.

It is said that these baths are much resorted to in the summer months, particularly by rheumatic patients. It is Humboldt, I believe, who remarks that in all climates people show the same predilection for heat. In Iceland the first Christian converts would be baptized only in the tepid streams of Hecla; and in the torrid zone, the natives flock from all parts to the thermal waters.

We had not time to survey the lake, — the advancing season, and the lessening flood in the Jordan, warning us to lose no time. We deferred making the necessary observations, therefore, until our return. The bottom is a concave basin, — the greatest depth, thus far ascertained, twenty-seven and a half fathoms (165 feet); but this inland sea, alternately rising and

falling, from copious rains or rapid evaporation, is constantly fluctuating in depth.

The water of the lake is cool and sweet, and the inhabitants say that it possesses medicinal properties. It produces five kinds of fish, all good,—viz. the "Musht," "Abu Bût," "Huffâfah," "Abu Kisher," and Bŭrbût;" the last, from some superstitious idea, is not eaten by the Jews. The musht, about one foot long and four or five inches wide, resembles the sole. Burckhardt mentions one called Binni, like the carp. All that we tasted, and we tried to procure them all, were delicious.

In the evening, we had a long conversation with the Arab boatman, who was one of the crew of Molyneux's boat. He gave a disheartening account of the great, and, as he thought, the insuperable impediments to boats as large as ours. He dwelt particularly upon the rapids and cascades, false channels and innumerable rocks, and was inclined to think that there was a cataract in the part of the river along which they transported their boat upon a camel. Among other things, he stated that many rivers empty into the Jordan, which I did not believe.

That we should encounter great obstacles, perhaps seemingly insurmountable ones, I did not doubt; but I had great faith in American sailors, and believed that what men could do, they would achieve. So there was no thought of turning back.

When in Constantinople, my patience was severely tried by a countryman, who, with the best intentions, but in bad taste, gave me a circumstantial account of the death of three British naval officers of my name, engaged in expeditions to the East. One captain and two lieutenants; the first perishing with his vessel in the Euphrates; one of the others massacred by the Arabs, and the third dying in the desert. Had their names been Jones and mine Jenkins, there would have been no foreboding; but as it was, the supposed astounding information was conveyed in a mysterious whisper, with an ominous shake of the head!

The pashas and governors, in this country, have an off-hand, and unfeeling mode of transacting business. When our camels broke down at Acre, Sa'id Bey was applied to, by our consul,

for additional ones. There happened, unfortunately, to be a fellah coming from Nazareth with two loaded camels, just then without the walls. He was made to throw his sacks of grain in the road; and without clothes, or communication with his family, sent to assist in the transportation of our effects. By chance, he found a friend to take care of his grain. Of course, we knew nothing of this; and would rather not have come at all, than have our progress facilitated by such an act of tyranny. It was not until about to settle with the camel-drivers, that we were told of it. The poor fellah was remunerated for his loss of time, and paid liberally for the use of his camels, the amount being deducted from the sum contracted for with Sa'id Mŭstafa.

We found here an old frame boat, which I purchased for six hundred piastres, about twenty-two dollars, in order to relieve the other boats, lessen the expense of transportation down the Jordan, and carry our tents upon the Dead Sea; for it was fast becoming warm, and we might not be able to work in that deep chasm without them. We repaired and named her "Uncle Sam."

Since we occupied these quarters, as well as along the route from Acre, Mŭstafa had purchased and cooked our provisions. He was inestimable; — a genuine Arab, speaking a little English, and able to boil a kettle, or roast a sheep, in a gale of wind in the open air. But his great recommendation was his unvarying cheerfulness at all times, and under all circumstances. Every morning, before and during breakfast, our room was thronged with Arabs, and Mŭstafa knew exactly what amount of attention to bestow upon each. To the governor and the sheikhs, he tendered the tiny cup of coffee, or the chibouque, with his head bowed down, and his left hand upon his breast; to those approaching his own degree, they were handed with cavalier nonchalance.

Monday, April 10. It was necessary to procure other camels here, the owners of those we brought from Acre not being willing to trust them in the desert, for which reason we had been detained, but not in idleness, for we were constantly occupied in making

barometrical and thermometrical observations, and taking sights to ascertain the rate of the instruments. It was necessary, also, to purchase and carry our provisions with us. Last night the camels were reported as coming, and this morning their arrival was announced. All, therefore, is the busy note of preparation.

A distinguished guest at our usual extempore levée this morning, was the Emir or Prince of the tribes on the upper banks of the Jordan. This royal personage delights in the euphonious patronymic of Emir Nasser 'Arar el Gŭzzaway. He had heard of our purpose, and came to proffer the hospitalities of his tribes. He was considerably taller and stouter than the generality of the race; his complexion was of the tint of burnt umber, his eye black, lascivious, and glistening like that of a snake; he wore a tangled black beard, and, with his fang-like teeth, smiled à la Carker. His costume was in no manner distinguished from that of his numerous attendants, unless in its superlative uncleanliness, and a pre-eminence in the liberal mode of ventilation adopted by this people.

The dirty barbarian affected a love of nature, and a slight taste for botany. Reclining lazily upon the cushions of the divan, with a kind of oriental voluptuousness, he ever and anon raised a rose-bud to his nostril, and enjoyed its fragrance with the exquisite languor of a city beau. The ogre prince! We accepted the invitation, and he joined the caravan.

In order that, by a division of labour, our work might be well performed, I assigned to each officer and volunteer of this expedition his appropriate duty. With the command of the caravan, Mr. Dale was to take topographical sketches of the country as he proceeded, and such other notes as circumstances would permit.

Dr. Anderson was directed to make geological observations, and collect specimens where he could; Mr. Bedlow to note the aspect of the country on the land route, and the incidents that occurred on the march; and Mr. Francis Lynch, who was charged with the herbarium, to collect plants and flowers.

In the water party, I assigned to myself, in the "Fanny Mason," the course, rapidity, colour, and depth of the river and its

tributaries, — the nature of its banks, and of the country through which it flowed, — the vegetable productions, and the birds and animals we might see, with a journal of events. To Mr. Aulick, who had charge of the "Fanny Skinner," was assigned the topographical sketch of the river and its shores.

It was my anxious desire to avoid taking camels down the Ghor; but, from the best information we could obtain respecting the river, I was obliged to employ them. As the Jordan was represented to run between high banks, I felt that our safety and the success of the expedition would depend materially upon the vigilance and alacrity of the land party. I therefore placed it under command of Mr. Dale. It consisted of Dr. Anderson, Mr. Bedlow, Mr. Lynch, Sherîf, 'Akīl, Mŭstafa, and ten Bedawin videttes. They were directed to keep as near to the river as the nature of the country would permit, and should they hear two guns fired in quick succession, to hasten with all speed to our assistance. I felt sure that Mr. Dale would not fail me, and in that respect my mind was at ease. The Sherîf, 'Akīl and the Emir all assured me that there was no danger to the caravan, but that the great fear was an attack upon the boats when entangled among rocks and shoals.

CHAPTER VIII.

FROM THE SEA OF GALILEE TO THE FALLS OF BŬK'AH. — DEPARTURE OF THE BOATS.

Bright was the day, gay our spirits, verdant the hills, and unruffled the lake, when, pushing off from the shelving beach, we bade adieu to the last outwork of border civilization, and steered direct for the outlet of the Jordan. The "Fanny Ma-

son" led the way, followed closely by the "Fanny Skinner;" and the Arab boatmen of the "Uncle Sam" worked vigorously at the oars to keep their place in the line. With awnings spread and colours flying, we passed comfortably and rapidly onwards.

Our Bedawin friends had many of them exchanged their lances for more serviceable weapons, long-barrelled guns and heavily mounted pistols. 'Akīl alone wore a scimetar: the priestly character of the Sherîf forbade him to carry arms. With the addition of the Emir and his followers, they amounted in all to thirty horsemen, and passing along the shore, in single file, their line was long and imposing. Eleven camels stalked solemnly ahead, followed by the wild Bedawin on their blooded animals, with their ābas flying in the wind, and their long gun-barrels glittering in the sun-light, and Lieutenant Dale and his officers, in the Frank costume, brought up the rear.

Gallantly marched the cavalcade on the land; beautiful must have appeared the boats upon the water. Little did we know what difficulties we might have to encounter! But, placing our trust on high, we hoped and feared not.

We started at 2 P. M., and at 3.40, arrived at the outlet. The same feeling prevented us from cheering as when we launched the boats, although before us was the stream which, God willing, would lead us to our wondrous destination.

The lake narrowed as we neared its southern extremity, and the scenery, as we left it and advanced into the Ghor, which is about three-quarters of a mile in breadth, assumed rather a tame than a savage character. The rough and barren mountains, skirting the valley on each hand, stretched far away in the distance, like walls to some gigantic fosse, their southern extremities half hidden or entirely lost in a faint purple mist.

At 3.45, we swept out of the lake; course, W. by N. The village of Semakh on a hill to the south, and Mount Hermon brought into view, to the north, the snow deep upon its crest, and white parasitic clouds clinging to its sides. On the extreme low point to the right were ruins, called by the Arabs, Es Sumra, only a stone foundation standing. A number of wild ducks

were upon the water, and birds were flitting about on shore. Our cavalcade again appeared in sight, winding along the bank. The Bedawin looked fine in their dark and white and crimson costumes.

Our course varied with the frequent turns of the river, from N. W. by W. to S. The average breadth about seventy-five feet; the banks rounded and about thirty feet high, luxuriantly clothed with grass and flowers. The scarlet anemone, the yellow marigold, and occasionally a water-lily, and here and there a straggling asphodel, close to the water's edge, but not a tree nor a shrub.

Passing an inlet or bay, wider than the river, called El Mûh, which extended north a quarter of a mile, we lost sight of the lake in five minutes after leaving it. Water clear and ten feet deep; saw the shore party dismounted on the right bank. Mount Hermon glittering to the north, over the level tract which sweeps between the mountain, the lake, and the river.

When the current was strong, we only used the oars to keep in the channel, and floated gently down the stream, frightening in our descent, a number of wild fowl feeding in the marsh grass and on the reedy islands. The current increasing, swept round a bend of the shore, and heard the hoarse sound of a rapid. At 5 P. M., came in sight of the partly whole and partly crumbled abutments of "Jisr Semakh," the bridge of Semakh.

The ruins are extremely picturesque; the abutments standing in various stages of decay, and the fallen fragments obstructing the course of the river; except at one point, towards the left bank, where the pent-up water finds an issue, and runs in a sluice among the scattering masses of stone.

From the disheartening account we had received of the river, I had come to the conclusion that it might be necessary to sacrifice one of the boats to preserve the rest. I therefore decided to take the lead in the Fanny Mason; for, being made of copper, quite serious damages to her could be more easily repaired; and if dashed to pieces, her fragments would serve to warn the others from the danger.

After reconnoitering the rapid, we shot down the sluice. The following note was made on shore :

"We halted at the ruins of an old bridge, now forming obstructions, over which, the river rushed like a mountain torrent. The river was about ninety feet wide. Soon after we halted, the boats hove in sight around a bend of the river. See! the Fanny Mason attempts to shoot between two old piers! she strikes against a rock! she broaches to! she is in imminent danger! down comes the Uncle Sam upon her! now they are free! the Fanny Skinner follows safely, and all are moored in the cove below!"

As we came through the rapids, 'Akīl stood upon the summit of one of the abutments, in his green cloak, red tarbouch and boots, and flowing white trousers, pointing out the channel with a spear. Over his head and around him, a number of storks were flying disorderly.

What threatened to be its greatest danger, proved the preservation of the leading boat. We had swept on a rock in mid-channel, when the Arab crew of the Uncle Sam unskilfully brought her within the influence of the current. She was immediately borne down upon us with great velocity; but striking us at a favourable angle, we slid off the ledge, and floated down together. The Fanny Skinner, drawing less water, barely touched in passing.

The boats were securely moored for the night in a little cove on the right bank, and were almost hidden among the tall grass and weeds which break the force of the eddy current.

We found the tents pitched on a small knoll, commanding a fine view of the river and the bridge. Over the ruins of the latter were yet hovering a multitude of storks, frightened from their reedy nests, on the tops of the ruined abutments, by the strange sights and sounds. There were two entire and six partial abutments, and the ruins of another, on each shore.

We were upon the edge of the Ghor. A little to the north, the Ardh el Hamma (the land of the bath) swept down from the left. The lake was concealed, although, in a direct line, quite

near; and a lofty ridge overlooked us from the west. The soil here is a dark rich loam, luxuriantly clothed, three feet deep with flowers, — the purple bloom of the thistle predominates, and the yellow of the marigold and the pink oleander are occasionally relieved by the scarlet anemone. The rocks nowhere crop-out, but large boulders of sandstone and trap are scattered over the surface. Some flowers were gathered here, which equal any I have ever seen in delicacy of form and tint. Among them, besides those I have named, were the Adonis or Pheasant's Eye; the Briony, formerly used in medicine; the Scabiosa Stellata, in great luxuriance, and which is cultivated at home; and two kinds of clover, — one with a thorny head, which we have never seen before, and the other small but beautiful, with purple flowers.

From the eminence above, our encampment beside the rapids looked charming. There were two American, one Arab, and one Egyptian tents, of different colours, — white and green, and blue and crimson. In the soft and mellow light of the moon, the scene was beautiful.

On this side is the land of Zebulon; that of the tribe of Gad lies upon the other.

The Sheikh of Semakh holds a tract of land on a singular tenure. The condition is that he shall entertain all travellers who may call, with a supper, and barley for their horses. Our Bedawin determined to avail themselves of the privilege. Nothing could be more picturesque than their appearance as they forded the stream in single file, and galloped over the hill to Semakh. And what a supper they will have! A whole sheep, and buckets of rice![1]

Our friends returned late at night, splashing the water, shouting, and making such a clatter that we sprang to our arms expecting an attack. Repeatedly afterwards during the night we were disturbed by Dr. Anderson's horse, which, since the moment he joined us at Turân, had kept the camp in constant alarm,

[1] Usually, when the Sheikh is not wealthy, the tents of the tribe take it in turn to entertain strangers.

getting loose at night and rushing frantically over the tent-cords, attacking some slumbering Arab steed, his bitter enemy.

Tuesday, April 11. Very early this morning culled for our collection two varieties of flowers we had not before seen. At 6 A. M., called all hands, and prepared for starting. To avoid stopping in the middle of the day, we were necessarily delayed for breakfast in the morning.

8 A. M., started, the boats down the river, the caravan by land. The current at first about 2½ knots, but increasing as we descended, until we came to where the river, for more than three hundred yards, was one foaming rapid; the fishing-weirs and the ruins of another ancient bridge obstructing the passage. There were cultivated fields on both sides. Took everything out of the boats, sent the men overboard to swim alongside, and shot them successively down the first rapid. The water was fortunately very deep to the first fall, where it precipitated itself over a ledge of rocks. The river becoming more shallow, we opened a channel by removing large stones, and as the current was now excessively rapid, we pulled well out into the stream, bows up, let go a grapnel and eased each boat down in succession. Below us were yet five successive falls, about eighteen feet in all, with rapids between, — a perfect breakdown in the bed of the river. It was very evident that the boats could not descend them.

On the right of the river, opposite to the point where the weirs and the ruined bridge blocked up the bed of the stream, was a canal or sluice, evidently made for the purpose of feeding a mill, the ruins of which were visible a short distance below. This canal, at its outlet from the river, was sufficiently broad and deep to admit of the boats entering and proceeding for a short distance, when it became too narrow to allow their further progress.

Bringing the boats thus far, we again took everything out of them, and cleared away the stones, bushes and other obstructions between the mill sluice and the river. A breach was then made in the bank of the sluice, and as the water rushed down the shallow artificial channel, with infinite labour, our men, cheerfully assisted by a number of Arabs, bore them down the rocky slope

and launched them in the bed of the river, — but not below all danger, for a sudden descent of six or seven feet was yet to be cleared, and some eighty yards of swift and shallow current to be passed before reaching an unobstructed channel.

We accomplished this difficult passage, after severe labour, up to our waists in the water for upwards of four hours. Hauled to the right bank to rest and wait for our arms, and instruments. We were surrounded by many strange Arabs, and therefore stationed one of our men by the blunderbuss on the bows of the Uncle Sam, and one each by the other boats, while the remainder proceeded to bring down the arms.

Starting again, we descended a cascade, at the rate of twelve knots, passing, immediately after, down a shoal rapid, where we struck, and hung, for a few moments, upon a rock. Stopped for the other boats, which were behind. The course of the river had been very circuitous, as reference to the chart will show.

In half an hour, came to two mills, the buildings entire, but the wheels and machinery gone, with a sluice which had formerly supplied them with water. As in the morning, we turned the water from the upper part of the sluice, into the river, carried the boats along, and dragged them safely round these second series of rapids.

The soil is fertile, but the country about here is wholly uncultivated. The surface of the plain is about fifteen feet above the river, thence gradually ascending a short distance to a low range of hills; beyond which, on each side, the prospect is closed in by mountains.

Stopped fifteen minutes to rest, after descending the eleventh rapid we had encountered. The velocity of the current was so great that one of the seamen, who lost his hold (being obliged to cling on outside), was nearly swept over the fall, and, with very great difficulty, gained the shore. The mountains on the east coast of Lake Tiberias were visible over the left bank. The summit of Mount Hermon (the snowy summit could alone be seen) bore N. E. by N.

At 5 P. M., passed a ravine (wady) on the left, in a bend

between high, precipitous banks of earth. We here saw cane for the first time, growing thickly. On the right are lofty, perpendicular banks of earth and clay. The river winding with many turns, we opened, at 5.04, an extensive, uncultivated plain on the right; a small, transverse, uncultivated valley, between high banks, on the left; — the wheat beginning to head. The river one hundred and sixty feet wide and two and a half deep. Current, four knots; the water becoming muddy. We saw a partridge, an owl, a large hawk, some herons and many storks, and caught a trout.

Rounding a high, bold bluff, the river became wider and deeper, with gravelly bottom. Passed the village of 'Abeidîyeh, a large collection of mud huts, on a commanding eminence on the right; — the people, men, women, and children, with discordant cries, hurrying down the hill towards the river when they saw us. It was too late to stop, for night was approaching, and we had seen nothing of the caravan since we parted with it, at the ruined bridge, this forenoon.

If the inhabitants intended to molest us, we swept by with too much rapidity for them to carry their design into execution.

The mountain ranges forming the edges of the upper valley, as seen from time to time through gaps in the foliage of the river banks, were of a light brown colour, surmounted with white.

The water now became clearer, — was eight feet deep; hard bottom; small trees in thickets under the banks, and advancing into the water — principally Tŭrfa (tamarisk), the willow (Sifsaf), and tangled vines beneath.

We frequently saw fish in the transparent water; while ducks, storks, and a multitude of other birds, rose from the reeds and osiers, or plunged into the thickets of oleander and tamarisk which fringe the banks, — beyond them were frequent groves of the wild pistachio.

At 8 P. M., reached the head of the falls and whirlpool of Bŭk'ah; and finding it too dark to proceed, hauled the boats to the right bank, and clambered up the steep hill to search for the camp. About one third up, encountered a deep dyke, cut in the

flank of the hill, which had evidently been used for purposes of irrigation. After following it for some distance, succeeded in fording it, and going to the top of the hill, had to climb in the dark, through briars and over stone walls, the ruins of the village of Delhemîyeh. A short distance beyond, met a Bedawy with a horse, who had been sent to look for us. Learned from him that the camp was half a mile below the whirlpool, and abreast of the lower rapids. Sent word to Mr. Aulick to secure the boats, and bring the men up as soon as they were relieved, and hastened on myself to procure the necessary guards, for our men were excessively fatigued, having been in the water without food since breakfast. A few moments after, I met 'Akīl, also looking for us. At my request, he sent some of his men to relieve ours, in charge of the boats.

The village of Delhemîyeh, as well as that of Bŭk'ah opposite, were destroyed, it is said, by the Bedawin, the wandering Arabs. Many of the villages on and near the river are inhabited by Egyptians, placed there by Ibrahim Pasha, to repress the incursions of the Bedawin — somewhat on our plan of the military occupation of Florida. Now that the strong arm of the Egyptian "bull-dog," as Stephens aptly terms him, is withdrawn, the fate of these villages is not surprising. The Bedawin in their incursions rob the fellahin of their produce and their crops. Miserable and unarmed, the latter abandon their villages and seek a more secure position, or trust to chance to supply themselves with food (for of raiment they seem to have no need,) until the summer brings the harvest and the robber. Once abandoned, their huts fall into as much ruin as they are susceptible of, which is nothing more than the washing away of the roofs by the winter rains.

Although I knew it to be important to note everything we passed, and every aspect of the country, yet such was the acute responsibility I felt for the lives placed under my charge, that nearly all my faculties were absorbed in the management of the boats — hence the meagreness of these observations. As some amends, I quote from the notes of the land party.

"Our route laid through an extensive plain, luxuriant in vegetation, and presenting to view in uncultivated spots, a richness

of alluvial soil, the produce of which, with proper agriculture, might nourish a vast population. On our route as we advanced, and within half an hour (distance is measured by time in this country) from the last halting-place, were four or five black tents, belonging to those tribes of Arabs called fellahin, or agriculturists, as distinguished from the wandering warrior Arab, who considers such labour as ignoble and unmanly.

"Enclosing these huts was a low fence of brush, which served to confine the gambols of eight or ten young naked barbarians, who, together with a few sheep and a calf, were enjoying a romp in the sunshine, disregarding the heat. We declined the invitation to alight, but accepted a bowl of camel's milk, which proved extremely refreshing.

"A miserable collection of mud huts upon a most commanding site, called 'Abeidîyeh, attracted our attention as we passed it. The wild and savage looking inhabitants rushed from their hovels and clambered up their dirt-heaps to see the gallant sight —the swarthy Bedawin, the pale Franks, and the laden camels. Still further on, we passed the ruins of two Arab villages, one on each side of the Jordan, and upon elevations of corresponding height, 'Delhemîyeh' and 'Bŭk'ah.'

"Below these villages, and close upon the Jordan's bank, where the river in places foamed over its rocky bed with the fury of a cataract, we pitched the camp. Here we were to await the arrival of the boats. At 2.30 we had encamped, and at 5 they had not yet arrived. The sun set, and night closed upon us, and yet no signs of them. We became uneasy, and were about mounting to go in search of them, when the captain made his appearance."

About 9 P. M., Emir Nasser, with his suite, came to the tent. After the customary cup of coffee, he said that he would go with us to Băhr Lŭt (Dead Sea), or wherever else I wished, from pure affection, but that his followers would expect to be paid, and requested to know how many I required; how far they were to go, and what remuneration to receive. I replied that I was then too weary to discuss the matter, but would tell him in the morning, and he retired. Either from exposure, or fatigue, or the

effect of the water, one of the seamen was attacked with dysentery. I anxiously hoped that he would be better in the morning, for each one was now worth a host.

Our encampment was a romantic one. Above was the whirlpool; abreast, and winding below, glancing in the moonlight, was the silvery sheen of the river; and high up, on each side, were the ruined villages, whence the peaceful fellahin had been driven by the predatory robber. The whooping of the owl above, the song of the bulbul below, were drowned in the onward rush and deafening roar of the tumultuous waters.

Every one laid down with his cartridge-belt on and his arms beside him. It was the dearest wish of my heart to carry through this enterprise without bloodshed, or the loss of life; but we had to be prepared for the worst. Average width of river to-day, one hundred and thirty feet; depth from two and a half to six feet; descended nine rapids, three of them terrific ones. General course, E. S. E.; passed one island.

It was a bright moonlight night; the dew fell heavily, and the air was chilly. But neither the beauty of the night, the wild scene around, the bold hills, between which the river rushed and foamed, a cataract; nor moonlight upon the ruined villages, nor tents pitched upon the shore, watch-fires blazing, and the Arab bard singing sadly to the sound of his rehabeh,[1] could, with all the spirit of romance, keep us long awake. With our hands upon our firelocks, we slept soundly; the crackle of the dry wood of the camp-fires, and the low sound of the Arab's song, mingling with our dreams; dreams, perchance, as pleasant as those of Jacob at Bethel; for, although our pillows were hard, and our beds the native earth, we were upon the brink of the sacred Jordan!

[1] The rehabeh is shaped like a miniature spade, with a short handle; the lowest and widest part, covered with sheepskin on both sides, is about one inch thick and five wide. The ghoss (bow) is simply a bent stick, with horse-hair for strings. This instrument is, perhaps, a coarser specimen of the nokhara khana, which is played before the gateways of palaces in Persia.

CHAPTER IX.

FROM THE FALLS OF BŬK'AH TO FOURTH CAMPING PLACE ON THE JORDAN.

Wednesday, April 12. Went out at daybreak this morning to look at the whirlpool and rapids above and below the camp. The banks were fringed with the laurestinus, the oleander, the willow, and the tamarisk; and farther inland, on the slope of the second terrace, grew a small species of oak and the cedar. The arbutus (strawberry tree) was mingled with the flowers of the plain. From the banks to the elevated ridges, on either side, the grass and the flowers presented a surface of luxuriance and beauty.

Picked up some specimens of quartz and trap. The chain of transverse hills through which the Jordan forces its way, is most probably that which separates the Ardh el Hamma from the vale of Jezrael.

The tribes through whose territories we had passed thus far, as given to me by 'Akīl, were the Beshâtewa, one hour above and below the bridge of Semâkh, numbering two hundred fighting men; next, the 'Obeidîyeh, on both sides, one hour back from the river, mustering five hundred; and the Es Sŭkr, in whose territories we are now encamped, numbering three hundred warriors.

About three hours from this, on an eminence, at the foot of which flows the Yermâk, is Um Keis (the mother of ruins), the ancient Gadara. This place, restored by Pompey the Great, is said to contain magnificent ruins, in an extraordinary state of preservation. In its wonderful tombs, it is believed that the demoniac of the Gospel dwelt, when our Lord performed a miracle; and in its hot baths is laid the strange scene of incanta-

tion in the life of Iamblicus, where he is said to have called up the spirits of Eros and Anteros.[1]

As the hot baths indicated the existence of volcanic characters, which might throw light upon the geological structure of that region, I gave Dr. Anderson an escort, and directed him to diverge from the line of march, visit Um Keis, and rejoin us at the appointed place of rendezvous at night.

Lake Tiberias was but four hours distant, in a direct line; although we had been a day and a half on the river, so tortuous is its course, and so interrupted is its channel.

Before starting this morning, I sent for the elder Sherîf and 'Akīl, and told them, and desired them to repeat to the Emir, that we did not ask for, and would neither buy nor receive protection: — that we were willing to pay for guides and provisions, and for all services rendered in descending the river, as well as for all damage we might occasion to weirs or mill-dams, — but for nothing more; and that the Emir and his guides would not be required beyond the limits of their territory. They said that we were perfectly right; but as the Emir had travelled to Tŭbarīyeh to welcome us, and had since been very useful, suggested that a present should be made to him. This was reasonable; and the Emir received an āba and a kōofeeyah. Among other things, we had provided ourselves in Acre with articles of Arab wearing apparel for occasions like the present. In this country, it is usual to pay the followers of a Sheikh for services in money; but to the Sheikh himself, a present is made. With much other judicious advice, the Rev. Mr. Smith had in Beïrût cautioned me not to employ the Arabs of one tribe as guides through the territories of another.

The "Uncle Sam" foundered, notwithstanding all our exertions to keep her afloat. Built of wood, she was less elastic than our metallic boats, and the thumps upon the rocks which only indented the last, shattered her. Thus ended all our hopes of transporting the tents from place to place along the Dead Sea,

[1] Quarterly Review.

and thereby protect the party from the dews of night. In every evil, however, there is an antidote, and we now had conclusive proof of the superior qualities of metallic boats for such service. Frame boats, constructed even in the strongest manner, would sooner or later have shared the fate of the "Uncle Sam."

Having reconnoitred in the morning from where the boats lay to the Yermâk, we went immediately after breakfast to endeavour to bring the former down. With a lofty hill, the terminus of a lateral range on each side, there was no possibility of conveying them round the falls, and we had, therefore, to shoot them. The current was too strong to use the grapnel.

At 10 o'clock, cast off and shot down the first rapid, and stopped to examine more closely a desperate-looking cascade of eleven feet. In the middle of the channel was a shoot at an angle of about sixty degrees, with a bold, bluff, threatening rock at its foot, exactly in the passage. It would therefore be necessary to turn almost at a sharp angle in descending, to avoid being dashed to pieces. This rock was on the outer edge of the whirlpool, which, a caldron of foam, swept round and round in circling eddies. Yet below were two fierce rapids, each about 150 yards in length, with the points of black rocks peering above the white and agitated surface. Below them again, within a mile, were two other rapids — longer, but more shelving and less difficult.

Fortunately a large bush was growing upon the left bank, about five feet up, where the wash of the water from above had formed a kind of promontory. By swimming across some distance up the stream, one of the men carried over the end of a rope and made it fast around the roots of the bush. The great doubt was whether the hold of the roots would be sufficient to withstand the strain, but there was no alternative. In order not to risk the men, I employed some of the most vigorous Arabs in the camp to swim by the side of the boats, and guide them, if possible, clear of danger. Landing the men, therefore, and tracking the Fanny Mason up stream, we shot her across, and gathering in the slack of the rope, let her drop to the brink of the cascade,

where she fairly trembled and bent in the fierce strength of the sweeping current. It was a moment of intense anxiety. The sailors had now clambered along the banks and stood at intervals below, ready to assist us if thrown from the boat and swept towards them. One man, with me in the boat, stood by the line; a number of naked Arabs were upon the rocks and in the foaming water gesticulating wildly, their shouts mingling with the noise of the boisterous rapids, and their dusky forms contrasting strangely with the effervescing flood, and four on each side, in the water, were clinging to the boat, ready to guide her clear of the threatening rock if possible.

The Fanny Mason, in the meanwhile, swayed from side to side of the mad torrent, like a frightened steed, straining the line which held her. Watching the moment when her bows were brought in the right direction, I gave the signal to let go the rope. There was a rush, a plunge, an upward leap, and the rock was cleared, the pool was passed, and, half full of water, with breathless velocity, we were swept safely down the rapid. Such screaming and shouting! the Arabs seemed to exult more than ourselves. It was in seeming only, they were glad; but we were grateful. Two of the Arabs lost their hold and were carried far below us, but were rescued with a slight injury to one of them.

It was exactly twelve o'clock when we cleared the cascade. Mr. Aulick soon followed in the Fanny Skinner, and by his skill and coolness passed down in perfect safety.

Stopping sufficiently long to give the men and the Arabs who had assisted us some warm coffee, we started again, and at one o'clock had completed the descent of the third rapid to-day. Hard work for all hands.

We then passed down the fourth fall and a shelving rapid of one third of a mile. Hauled over to the right bank, just above a shelving rapid, with a yet more ugly sheer at an abrupt angle, and waited for the Fanny Skinner. Sent for the arms, and gave directions for the caravan to proceed to Jîsr el Mejâmiá (bridge of place of meeting), about three miles distant by land, but much farther, and far more difficult, by the river. It was represented

by our friends as the only place where the caravan and boats could meet that night, and where, in the opinion of Sherîf, yet greater difficulties awaited us.

At 2.30, the caravan passed about a mile off, a camel being detached towards us with our arms. When it came up, as all the arms had been packed away, I imprudently consented to let them be carried back to the caravan, taking out only a few weapons that were convenient. An hour after, saw the caravan again creeping along the crest of the high hills to the southward, in an extended and picturesque line. There is no road;—in other words, no camel or mule track.

At 3.50, the Fanny Skinner came down, and we descended the fourth rapid, rounding back from W. S. W. to S. E. by S. in a distance of ninety yards.

At 4 P. M., passed the mouth of the Yermâk (Hieromax), one hundred and thirty feet wide, with moderate current, its centre bearing E. ½ S. River very rapid—this was the most perilous part of our passage, owing to the great velocity of the current, about twelve miles an hour, and some sunken rocks, one of which we escaped by about two inches.

Stopped to examine a very steep and tumultuous rapid. On hands and knees I climbed an almost perpendicular hill-side to examine for a passage. The hill-side and summit were thickly covered with grass and flowers, which rendered it very slippery to climb.

The hill was about three hundred feet high, and the view from the summit wild and peculiar. The high alluvial terraces on each side were everywhere shaped by the action of the winter rains into a number of conical hills, some of them pyramidal and cuniform, presenting the appearance of a giant encampment, so perfectly tent-like were their shapes. This singular configuration extended southward as far as the eye could reach. At intervals I caught a glimpse of the river in its graceful meanderings, sometimes glittering like a spear-head through an opening in the foliage of its banks, and again, clasping some little island with its shining arms, or, far away, snapping with the fierceness and white foam of a torrent by some projecting point.

Fortunately there were some bushes on the right bank, which determined me to attempt the descent. Bearing the boats as far down as we could hold them against the current, we fastened the end of a rope to a bush and lowered them down to near its end; then sheering in shore, fastened the rope to another bush, lowered away, and dropped through one of the most frightful rapids we had yet encountered. It was near sunset when both boats had accomplished the passage, and it became necessary in so wild a country to make every exertion to reach our friends, for we had but one carbine and three pistols with us.

After shooting two more slight rapids, we came in sight of Jîsr Mejâmiá (bridge of the place of meeting), above which we landed on the right shore, and ascended the cliff to examine the fall and rapid immediately below.

A ruined khan crowned the crest of the hill, at the foot of which large masses of volcanic rock or tufa were lying about, as if shaken from the solid mass by the spasm of an earthquake. The khan had evidently been a solid structure and destroyed by some convulsion, so scattered were the thick and ponderous masses of masonry. The bridge gracefully spans the river at this point. It has one large and three smaller Saracenic arches below and six smaller ones above them, four on the east and two on the west side. The river, deep, narrow, and impetuous, flows through the larger arch and immediately branches, — the left arm rushing down a nearly perpendicular fall of about eight feet, and scarce a boat's length ahead encounters the bold rock of the eastern bank, which deflects it sharply to the right. The right branch, winding by an island in the centre, and spreading over a great space, is shallow, and breaks over a number of rocks.

Above and below the bridge and in the bed of the river are huge blocks of trap and conglomerate; and almost immediately opposite is a great fissure exposing perpendicular layers of basalt, the structure distinct, black, and porous. Upon the left bank, which is about sixty feet above the river, a short distance up, were twenty or thirty black Bedawin tents, with a number of

camels grazing around,—the men seated in groups—the women, the drudges of each tribe, passing to and fro, busied apparently in culinary preparations, and near them were some children playing. We decided to try the right branch, for we dreaded these ugly leaps.

In some instances during the day the rapids had been perfect cataracts down which the boats plunged with such velocity as to drive them over the rocks below, upon which they would otherwise have rested, from the shallowness of the water.

Resuming the oars, we shot through the main arch and down about two hundred yards of the descent to the right, when it becoming too dark, hauled to the bank and made fast for the night. Took everything out of the boats and proceeded with the crews to the camp, about a quarter of a mile below. Our main course had been S. S. W., but the river was very serpentine. We descended three very threatening and four less difficult rapids. The only tributary passed was the Yermâk, coming in from the east, as wide, and as deep nearly as the Jordan. The current was very rapid, averaging eight miles per hour.

Our tents were pitched upon a small promontory, commanding a fine view of the ruined khan and the bridge, with the river dashing and foaming through its arch. Directly in front, the river, filled with fragmentary rocks, is quite wide, and, separating into several channels, forms some small sedgy islands, where snipe were flitting about, and discordant frogs were croaking.

The bridge is on the road from Nabulus, through Beísàn, to Damascus. The second place, now in ruins, was the Bethsean of the Bible, and Scythopolis of the Greeks. Saul and his three sons, after the defeat under Mount Gilboa, threw themselves upon their swords, and their bodies were exposed from the walls of this town.

At noon to-day the thermometer stood at 90° in the shade. The elder Sherîf (who by way of distinction we called *the* Sherîf) and 'Akîl frequently visited us in our tent. The former was our counsellor, sagacious and prudent; the latter was the bold war-

rior and the admirable scout. On the march, it was said that he contrived to get a sight of the boats when no one else could. We never tired of the company of this graceful savage. Altogether, he was the most perfect specimen of manhood we had seen. Looking at his fine face, almost effeminate in its regularity of feature, who would imagine that he had been the stern leader of revolt, and that his laughing, careless eye had ever glanced from his stronghold on the hill upon the Pasha's troops in the plain, meditating slaughter in their ranks and booty from the routed Turk; or searched the ravines and the hill-sides, the wady and the valley, for the lurking fellahin and their herds? That arm, which, in its easy and graceful position, seemed almost nerveless, had wielded the scimitar with fatal strength; and *he*, seemingly so mild, had successfully led a small but desperate band against the authority of the Sultan, and forced the Governor of Acre to treat with him, and purchase the security of the district with a high office and the crimson pelisse of honour.

'Akīl did not excel in physical qualities alone; his intelligence was far above mediocrity; and although a barbarian, he had much of the manners and feelings of a gentleman. Indeed, we had never seen manners more courtly, or an address more winning, than his. He was the Achilles of our camp.

When 'Akīl was this evening asked why he did not settle down on some of the fertile lands in his district, and no longer live on pillage, his reply was, "Would you have me disgrace myself, and till the ground like a fellah?"

When I told him that many of our most eminent men were tillers of the ground, his smile was more of a contemptuous one than we had ever seen upon his handsome features. This genuine barbarian owned a small pistol, which he has been known to give loaded to his children for a plaything.

We were all fatigued, and retired early to our hard but welcome beds. The moon was almost at her full, and the same wild scene of Arabs' tents, tethered horses, and watch-fires, with the strange, monotonous, song of the Bedawy bard, formed a repeti-

tion of last night's romance. Early in the evening, Dr. Anderson returned. In the forenoon, the weather was warm; towards noon it clouded up and looked like rain, but in the evening, cleared away and was pleasant.

We were in the land of Issachar, that of Gad still opposite.

Thursday, April 13. Hearing that Muhammed Pasha, military governor of the district of Nabulus, was encamped in the Valley of Esdraelon (Jezral?), a short distance from Beîsan, I sent Lieutenant Dale, this morning, to call upon him. I considered this a becoming mark of respect; for, except Sa'id Bey, the Turkish officers had been very civil to us.

Although it threatened rain yesterday, this morning's sky was cloudless. After much labour we succeeded in getting the boats down the rapids uninjured, except a few indentations in the bilge, and got on board the arms and instruments. At 9.30, started at the same time with the caravan. As we would to-day reach the utmost limits of cultivation, and approach the lower Ghor—a perfect desert, traversed by warlike tribes,—the Sherîf warned me to be prepared. I therefore mounted the blunderbuss on the bows of the Fanny Mason. Formidable it must have looked, with its gaping mouth, pointed down stream, and threatening slugs and bullets to all opponents.

We soon came to an ugly rapid, by a long, thatched hut on the right bank. Notwithstanding all our efforts, the Fanny Mason struck and broached-to, broadside on, against the rocks beneath the surface, and was thrown upon her bilge, taking in a quantity of water. For some moments, I feared that she would go to pieces; but, all hands jumping overboard, her combined strength and buoyancy carried her safely over. On the first heights of the Ghor, to the eastward, was the village of Sidum'âd; and the village of Jum'ah, on the western bank. Passed the village of Kaukab el Hauma, visible to the west, on a lofty height, which presented trap-rock with fissures. Descended a rapid, and heard a small tributary falling in, from S. E. by E., but owing to the thicket, could not see it. A village in sight on a hill far to S. E.

There are evidently two terraces to the Jordan, and through the lowest one, the river runs its labyrinthine course. From the stream, above the immediate banks, there is, on each side, a singular terrace of low hills, like truncated cones; the upper terrace of which I have spoken; which is the bluff terminus of an extended table-land, reaching quite to the base of the mountains of Hauran on the east, and the high hills on the western side. Their peculiarity of form is attributable, perhaps, to the washing of rain through a long series of years. The hill-sides presented the appearance of chalk, without the slightest vestige of vegetation, and were absolutely blinding, from the reverberated sunlight.

At times we would be perfectly becalmed, the trees and bushes which lined the banks intercepting the light air that came down from the mountains; — when, even at this early season, the heat would be intense; and the birds, ceasing to sing, hid themselves among the foliage, from which even the noise we made could not startle them.

There is nothing more vivid than the impression made by such scenes — the stillness of an untrodden wilderness, when "the slightest sound makes an onslaught upon silence," — a silence rarely broken, except by the noise of the far-distant rapid, which comes upon the ear like the wind when it sweeps the dry leaves of autumn before it.

On one of these occasions, when the stream was shadowed by the graceful oleander, the low, drooping willow and the fern-like tamarisk, and a stillness audible prevailed, we were swept sharply round the base of a high barren bluff, towards the opposite shore, when it became necessary to pull out again into the channel. In so doing, the water-worn banks distinctly echoed the steady beat of the oars in the rullocks; but it was soon after lost in the hoarse murmur of the rapid we were approaching, which went surging over the shallows in its burly, blustering course.

Passing an island about a quarter of a mile long, with many trees upon it, we saw a singular gap in the mountains to the southward.

Soon after reached Zor el Basha, the territories of the tribe el Gaurîneh (Emir Nassir's), occupying two hours on the banks of the river, and numbering three hundred fighting men. Stopped to take observations for the latitude.

There were many wild pigeons flying about, some of them very large. Started again, and passed two successive but slight rapids, with many trees in the stream, and stopped to rest in a grove of tamarisk; the weather becoming warmer every day. We were changing our climate in a twofold manner, by descent and by progress southward.

2 P. M. Started again, the river becoming serpentine—course, all round the compass. A great many Arabs on the shore, who ran after us, shouting loudly. They were the subjects of the Emir. Some Arab women on a high hill to the left. The river one hundred and twenty feet wide, and six deep, gravelly bottom; current, five knots; four Arabs in sight Soon after, remarkably smooth but rapid descent, river very serpentine, five feet deep; a beautiful strip of variegated sands and marls; passed a wady, or dry ravine, on the right. Course S. W. to W. by N., thick canes and thistles; water appeared to have fallen two feet within the last day or two; steady descent.

For the last hour, we had seen no rocks, but passed a small rapid, the river running from left to right, across the valley. On the right, a round point with an Arab encampment upon it, the population in an uproar; men, women, and children shouting, and running down to the landing-place; passed a small island just below.

In fifteen minutes, came to a long reach in the river; the first straight line we have seen in its entire course, thus far. Passed the territory of the tribe Es Sŭkr el Ghor, five hundred fighting men. There were large ghurrah trees on each side. They are like the aspen, and are said to bear a juicy, sweet-flavoured fruit. There were many birds on shore, and several fish-hawks (hedda) flying about. Passed a cluster of small islands; and many short turns in the river. Saw 'Akīl, our tutelary genius, on the summit

of a high bank. Brought-to for the night, and secured the boats. The banks were high and precipitous, but guarded in some measure from the erosive action of the swift current by the gnarled roots of the trees and the thicket growth along the bluff. Just above and below this spot, which was selected for our camping-ground, the river describes a series of frantic curvilinears, and returns in a contrary direction to its main course, thus forming a peninsula; and the isthmus, now rapidly wearing away on both sides, bids fair speedily to become an island. The boats were secured to the right bank, thirty feet below the summit. We have descended to-day three large and seven small rapids; general course, S. by E. We passed one small stream coming in from south-east, and four small islands. The river averaged one hundred and fifty feet in width, four feet depth, and five knots current.

We were yet in Galilee, in the land of Issachar; opposite was Gilead, the land of Gad.

The caravan started with us this morning, 'Akīl and his scouts acting as guides. As far as the eye could reach, the plain extended before them; the course of the river distinctly distinguishable in some of its mazes and graceful sinuosities, and again hidden by some bold bluff or conical hill, at the base of which it turned abruptly, and left them in doubt whether it flowed north, south, east, or west.

They first passed some cultivated patches of wheat and barley, even at this early season looking ripe, and nearly ready for the harvest. Who would reap them? Not a human being was in the scope of vision; nor tent, nor hut, nor sight of human dwelling. There was no sound, except the rush of the river and the noise of the wind, as it swept over the nodding grain — a yellow sea! where light seemed chasing shadows as the breeze passed over. And yet, the hands that planted would come to reap them in the season, — if not anticipated by the spoiler. The wheat and the barley would fall before the sickle, and the hands of the gleaner be busy in the steps of the reaper; the tents would be

spread by the river-side, and the young and the old, the strong and the feeble, the youth and the young girl, would be abroad in those silent fields. And when the sheaves are bound with the withes, and the unmuzzled ox has trodden out the golden grain, or the threshing sledge has been trailed round the slippery croft, and the light wind has winnowed the uptossed wheat,—then, of all their wealth close reaped and gleaned, once more upon their waste, unsheltered fields, will settle silence and the desert heat.

The first hour of their journey, was through a most beautiful tract of alluvial, the country entirely destitute of cultivation; nothing but a rank luxuriance of thistles and wild grass indicating the natural productiveness of the soil. The variety of thorns and thistles was remarkable.

Along the banks of the river, ran a singular terrace of low hills, in shape like truncated cones, which extended quite to the base of the mountains.

From thistles and wild grass, they advanced into utter barrenness and desolation; the soil presenting the appearance of chalk, without the slightest vegetation. Around, and quite near, were large flocks of storks, walking with exceeding vanity, and in no manner alarmed or disconcerted; some even stood on one leg, in quiet contemplation of the unusual spectacle which the caravan presented.

At one time, they stopped to rest; and, seated in the wilderness, the fierce sun beat upon their heads, and glittered on the barrels of their guns until they became painful to sight and touch. Not a tree, nor a shelter from the heat, in that vast plain! but up from the parched and blasted earth went streaming, like visible air, the waving, heated atmosphere; and the whole extent of land, to the deep-rooted hills in the purple distance, was quivering with the heat.

Starting afresh, a short ride brought them once more near the banks of the river, down to which they turned their horses. It was almost impossible to restrain the thirsty animals. At the sight and sound of the flowing river, they dashed down the slope,

plunged through the thicket, and, standing mid-leg in the stream, thrust in their heads to the very eyes, and drank till their whole frame shook with the action.

The day was considerably advanced when they came in sight of an encampment of black tents. Diverging from their line of march, they ascended the steep bank to an elevated plain, upon which the encampment stood. Several of the tribe came to meet them, bearing the tufted spear, which indicates the presence of the Sheikh himself or some of his sons. Dismounting, they entered the tent pointed out to them, where mats were spread, and coffee and pipes in readiness, indicating an expectation of their arrival.

"Pottle-bellied children," with hair unkempt and streaming in a scalp-lock (the rest of the head close-shaven), naked as cherubim in a church picture, were rolling on the grass and performing other gambols peculiar to that tender age. Soon after, the old men and the Bedawîyeh (female Bedawin), the palms and finger-nails of the latter tinged with henna, and their cheeks and lips tattooed purple by the kholl powder, came forth to look upon and wonder at the Franks. Several of the young girls would have been pretty, were it not for the disfiguring tattoo, which gave the lips an appearance almost revolting, from its resemblance to the livid hue of death. Some of the young men of the tribe were cast in as soft and delicate a mould as manhood is susceptible of, without leaning to effeminacy. The brother of the Emir was a perfect Antinöus, who, however, thought more of his personal beauty than became a brave, and the brother of a warlike Sheikh.

The encampment consisted of some thirty or forty of those peculiarly constructed tents, made of coarse cloth of goats' hair. They were supported by a row of poles in the centre, the sides slightly inclined and hauled out by ropes which are pinned to the ground. In shape they resemble somewhat an oblong shed, and are, generally speaking, miserable substitutes for a dwelling.

The little cup, for they had but one apparently, having been artistically cleansed by the thumb of the attendant Ganymede,

and presented to each in turn, the Franks, as guests, having the precedence, the coffee it contained being a concentrated essence of that luxury, pipes were offered, and then, submitting, as usual, to be stared at, and have their arms handled and inspected as if they were at muster, water was brought and poured upon their hands from a very equivocal water-jar, after which followed the repast. A large wooden bowl of pilau (boiled rice, liberally larded with rancid butter) constituted this pastoral banquet; the enjoyment of which could not be attained through the medium of fork or spoon, but demanded a kind of scientific conversion of the hands and fingers into these civilized conveniences.

An hour's ride thence brought them to the end of the plain, or tabular summit of the low range of sand-hills upon which the encampment they had visited was situated. Here descending the precipitous hill to the plain or terrace below, they came once more upon the banks of the Jordan. Numerous black tents occupied the green and richly cultivated plain, or were scattered here and there, close to the river bluff, half hidden by the pale green willow and the deeper shadow of the tamarisk. Here they pitched the tents and waited for the boats — the whole population crowding round them in speechless admiration of all that transpired.

With the interpreter, (Mr. Ameuny), and the Arab escort, Mr. Dale started at an early hour this morning, to call upon Muhammed Pasha. The banks of the Jordan, he reports, are divided into two regular steps or terraces, one on each side, between the river and the mountains: 1st, a flat through which the river winds, and 2d, an elevated plain. After passing a deep ravine, he came upon the Emir's wheat fields which covered the sloping plain to Beîsan, the soil a rich marl.

Following the ravine towards Beîsan, he came to quite a large stream, issuing directly from the base of a hill, with a solitary palm-tree near it; the first tree of any kind he saw on the elevated plain. The flat, however, was covered with trees. This spring forms an oasis, and is called Ain és Sauda, the black spring.

Instead of passing through the ruins of Beîsan, he went north, about a mile distant from them. He then came in sight of a magnificent valley, filled with the Pasha's tents, and a thousand horses, all picketed out to graze.

Muhammed Pasha, a fat Osmanlie, received him frankly and kindly. He said he was about to move his command (one thousand Turkish cavalry), for the purpose of chastising a band of bad Arabs to the southward, but delayed his march on our account, for fear of exasperating them to some attack upon us. He gave him coffee, pipes, and oranges, and insisted upon sending ten horsemen to accompany the expedition through the dangerous territory.

It was a magnificent sight, the tents and the war-horses spread over this beautiful plain of Jezrael, a branch of Esdraelon.

I regretted that the Pasha had sent the horsemen, for their presence would tend more, perhaps, to endanger than to aid us; but, as it was meant in kindness, it would have seemed rude to send them immediately back, particularly as the march of the Turkish encampment had been delayed on our account. But the presence of the horsemen increased my anxiety: the sight of them might exasperate the Arabs, and I had no faith in their courage or fidelity.

The Emir insisted upon our dining with him this evening, and would take no denial. It was decided that a part should go, and a part remain to guard the camp. At 5, the former set out to partake of the wild Arab's hospitality in his black tent. These tents, as I have said, are nothing but strips of black cloth, made of goats' hair, put up hut fashion, and opening in front. This cloth is coarse and porous, but is said to swell when wet, and thus become impervious to the rain.

When we arrived at their encampment, an Arab woman screamed out and wept bitterly at the sight of 'Akīl. In him she recognised the murderer of her husband, in a foray the previous year. If 'Akīl felt remorse, as he certainly must have done, he possessed too much of the stoicism of the savage to let it become apparent.

Great was the Emir's delight at our visit, and more particularly at the honour of receiving a lineal descendant of the Prophet in his tent. He exhibited his flocks of sheep, his cows (the first we had seen on the Jordan), his goats, his camels, and little dirty objects which he called his children. There was the children's pet, a beautiful young camel, three months old, white as drifted snow, with hair soft and fleece-like as wool.

At sunset, a young man wearing a white turban, probably a mŭllah (or teacher), spread his sheep-skin jacket upon the ground, and stood up and called the faithful to prayer. The Sherîf and four others formed a line behind the mŭllah, who led the recitations. While going through their prostrations, like a file of soldiers, the others were talking as usual.

To add to the scene, the file of horsemen sent by the Pasha, on their way to our camp, arrived in time to partake of our dinner, just then brought in. It consisted of an enormous wooden bowl filled with a stew of mutton and rice for the Arabs, and a smaller one for ourselves. The sheep had been killed and dressed immediately in front of the tent. All ate with their hands,—the Arabs gathering up small balls of unctuous rice, and fairly cramming them into their mouths. Hungry as we were, it was impossible to eat; for, although a separate bowl was placed before us, we had seen the poor sheep killed, and had misgivings of the cleanliness of the cook. The most we could do, was to affect to eat.

It was a wild sight after dark, the tents and spears, and groups of ragged Ghuarîneh seated in front, around a blazing fire.

It was a soft, clear night, and the dew fell heavily in the mid-watch; and the bulbul sang a low, plaintive song in the thicket, and the sentinels walked to and fro upon the bank, which was wearing away beneath them.

"Hark! their heedless feet from under,
Drop the crumbling banks for ever;
Like echoes to a distant thunder,
They fall into the gushing river."

"Some gentle thing has heard their tread," for there was the sound of wings, and a quick, shrill cry, growing fainter and fainter in the distance. This sweet hour of romance was broken in upon by the most appalling sounds: — "To arms! to arms!" What is it? Dr. Anderson's horse has made an attack upon his unsuspicious enemies.

CHAPTER X.

FROM FOURTH CAMP ON THE JORDAN TO THE FORD OF SŬK'WÂ.

Friday, April 14. A beautiful morning; but several of us quite sick. Took leave of the caravan for the day, and, with Sherîf and the Emir, descended to the boats by the aid of the gnarled and tangled roots which protruded from the face of the bank; and, with a "push off," "let fall," and "give way," we shot into the current, and swept away before the eyes of the wondering Ghaurîneh. Their astonishment at beholding our boats, and our strange appearance, had in it something extremely ludicrous. On rising at an early hour this morning (for we were generally up and stirring long before the lagging sun), we found the whole bank lined with these wondering barbarians, who were lying at full length upon the bluff, with their heads projecting over the bank, and looking upon the floating wonders beneath; turning, from time to time, to regard the race to whom belonged such rare inventions, such famous mechanism, as boats and six-barrel revolvers.

The boats had little need of the oars to propel them, for the current carried us along at the rate of from four to six knots an hour, the river, from its eccentric course, scarcely permitting a correct sketch of its topography to be taken. It curved and twisted north, south, east, and west, turning, in the short space

of half an hour, to every quarter of the compass,—seeming as if desirous to prolong its luxuriant meanderings in the calm and silent valley, and reluctant to pour its sweet and sacred waters into the accursed bosom of the bitter sea.

For hours in their swift descent, the boats floated down in silence, the silence of the wilderness. Here and there were spots of solemn beauty. The numerous birds sang with a music strange and manifold; the willow branches were spread upon the stream like tresses; and creeping mosses and clambering weeds, with a multitude of white and silvery little flowers, looked out from among them; and the cliff-swallow wheeled over the falls, or went at his own wild will darting through the arched vistas, shadowed and shaped by the meeting foliage on the banks; and, above all, yet attuned to all, was the music of the river, gushing with a sound like that of shawns and cymbals.

There was little variety in the scenery of the river to-day. The stream sometimes washed the bases of the sandy hills, and at other times meandered between low banks, generally fringed with trees, and fragrant with blossoms. Some points presented views exceedingly picturesque—the mad rushing of a mountain torrent, the song and sight of birds, the overhanging foliage and glimpses of the mountains far over the plain, and here and there a gurgling rivulet poured its tribute of crystal water into the now muddy Jordan. The western shore was peculiar, from the high calcareous limestone hills, which form a barrier to the stream when swollen by the efflux of the sea of Galilee during the winter and early spring; while the left or eastern bank was low, and fringed with tamarisk and willow, and occasionally a thicket of lofty cane, and tangled masses of shrubs and creeping plants, giving it the character of a jungle. At one place, we saw the fresh track of a tiger on the low clayey margin, where he had come to drink. At another time, as we passed his lair, a wild boar started with a savage grunt and dashed into the thicket; but, for some moments, we traced his pathway by the shaking cane and the crashing sound of broken branches.

The birds were numerous, and at times, when we issued from

the shadow and silence of a narrow and verdure-tented part of the stream into an open bend where the rapids rattled and the light burst in, and the birds sang their wildwood song, it was, to use a simile of Mr. Bedlow, like a sudden transition from the cold, dull-lighted hall where gentlemen hang their hats, into the white and golden saloon, where the music rings, and the dance goes on.

The hawk, upon the topmost branch of a blighted tree, moved not at our approach, but

> "Stood with the down on his beak,
> And stared, with his foot on the prey;"

and the veritable nightingale ceased not *her* song, for she made day night in her covert among the leaves; and the bulbul, whose sacred haunts we disturbed when the current swept us among the overhanging boughs, but chirrupped her surprise, calmly winged her flight to another sprig, and continued her interrupted melodies.

Unable to obtain one alive, we startled the solitude of the wilderness with a gun-shot, and secured the body of a brown-breasted, scarlet-headed and crimson-winged bird, the eastern bulbul. The Arabs call a pretty bird a bulbul, but Sherîf, who was with me in the boat, insisted upon it that it was the specific name of the bird we had killed. We were less successful with others of the feathered race, for although the sharp crack of the rifle and the louder report of the carbine awoke the echoes of the Jordan wilds, no other trophy than this unhappy bulbul could be produced when we met at night. The gentle creatures seemed each to bear a charmed life, for when we fired at them, they would spread their wings unhurt, and dart into the thick and tangled brushwood, and burst forth again in song from a more hidden covert; or sometimes just rise into the air and wheel above the broken sprig, or torn leaf, to settle once more as calmly as if the noise which had startled them were but the familiar sound of the breaking of a dried branch, or the plunge of a fragment of the soil from the water-worn banks into the current below.

Our course down the stream was with varied rapidity. At

times we were going at the rate of from three to four knots the hour, and again we would be swept and hurried away, dashing and whirling onward with the furious speed of a torrent. At such moments there was excitement, for we knew not but that the next turn of the stream would plunge us down some fearful cataract, or dash us on the sharp rocks which might lurk unseen beneath the surface.

For the reasons I have before stated, the Fanny Mason always took the lead, and warned the Fanny Skinner when danger was to be shunned or encountered. When the sound of a rapid was distinct and near, the compass and the note-book were abandoned, and, motioning to the Fanny Skinner to check her speed, our oars began to move like the antennæ of some giant insect, to sweep us into the swiftest, which is ever the deepest part of the current; when it caught us, the boat's crew and our Arab friend Jŭmâh (Friday) leaped into the angry stream, accoutred as they were, and, clinging to her sides, assisted in guiding the graceful Fanny down the perilous descent. In this manner she was whirled on, driving between rocks and shallows with a force that made her bend and quiver like a rush in a running stream;—then, shooting her through the foam and the turmoil of the basin below, where, in the seething and effervescing water, she spun and twirled, the men leaped in, and, with oars and rudder, she was brought to an eddying cove, from whence, by word and gesture, she directed her sister Fanny through the channel.

Beyond these interruptions, the river flowed broad and deep, yet maintaining much of the features of a torrent.

Many islands, some fairy-like, and covered with a luxuriant vegetation, others mere sand-bars and sedimentary deposits, intercepted the course of the river, but were beautiful features in the general monotony of the shores. The regular and almost unvaried scene of high banks of alluvial deposit and sand-hills on the one hand, and the low swamp-like shore, covered to the water's edge with the tamarisk, the willow, and the thick, high cane, would have been fatiguing without the frequent occurrence of sand-banks and verdant islands. High up in the sand-bluffs,

the cliff-swallow (asfûr) chattered from his nest in the hollow, or darted about in the bright sunshine, in pursuit of the gnat and the water-fly.

A little before twelve o'clock we stopped to take a meridian observation. This requiring but a short time, we were soon on our way again, to encounter more trials in this difficult navigation. As the evening shadows lengthened more and more upon the stream, we repeatedly stopped to look out for the caravan. The Sherîf was evidently very uneasy. On each occasion the faithful Jûmâh was our scout, but he never landed without putting on a belt with a brace of pistols. He returned, at last, with the intelligence that he had seen the caravan pursuing its march in the distance, and we continued on our way.

The loud report of a carbine presently echoed among the cliffs, and a flock of storks rose from the margin of the river, and flew past us. The Sherîf had wounded one poor fellow, and his leg hung shattered and dangling, as he strove to keep up with his frightened companions. His efforts were unavailing; the movement of his wings was but a spasm of his agony, and he fell in the water before us. The stream carrying him down, threw him on a low marshy bank, where the poor creature was making desperate efforts to drag himself from the water, as we dashed by on the rapid out of sight. I could not refrain from telling Sherîf that it was a pity to shoot a bird unfit to eat, and not required as a specimen, and which, by the Muhammedan law, was regarded as a sacred one.

For an hour or more we swept silently down the river, and the last tints of sunset were resting on the summits of the eastern mountains; wet and weary, without a change of clothes, and with neither tents nor provisions, we began to anticipate a night upon the river, separated from our friends, when, at a turn, we beheld a horseman on the crest of a high hill, his long āba and his koofeeyah streaming in the wind. To our great delight we recognised him to be our gallant 'Akīl. He descended rapidly the almost perpendicular hill-side! None but an Arab steed and rider could have done it!

The brief remainder of our day's journey was rendered more perilous even than the commencement, from the frequency of rapids and the difficulty of navigation in the fast-fading light. The swift current, as we sometimes turned a point of land, would seize us and send us off at a salient angle from our course, as if it had been lurking behind that point like an evil thing, to start out and clutch us suddenly and dash us upon the opposite bank, or run us under the low hanging boughs, as if for the purpose of *rubbing us all out*, or injuring us against the gnarled and projecting roots, where skulked the long clammy earth-worm and the green lizard.

The scenery became also more wild as we advanced; and as night, like a gloomy Rembrandt, came throwing her dark shadows through the mountain gorges, sobering down the bright tints upon their summits, the whole scene assumed a strange and savage aspect, as if to harmonize with the dreary sea it held within its midst, madly towards which the river now hurried on.

But, altogether, the descent to-day was much less difficult than those which had preceded it. The course of the river formed a never-ending series of curves, sometimes dashing along in rapids by the base of a mountain, sometimes flowing between low banks, generally lined with trees and fragrant with blossoms. Some places presented views extremely picturesque, the rapid rushing of a torrent, the song and sight of birds, the overhanging trees, and glimpses of the mountains far over the plain. Here and there a gurgling rivulet poured its tribute of pure water into the now discoloured Jordan. The river was falling rapidly; the banks showed a daily fall of about two feet, and frequently we saw sedge and drift wood lodged high up on the branches of overhanging trees—above the surface of the banks—which conclusively proves that the Jordan in its "swellings" still overflows the lower plain, and drives the lion from his lair, as it did in the ancient time.

In some places the substratum of clay along the banks presented the semi-indurated appearance of stone. For the first time we saw to-day sand, gravel, and pebbles, along the shores, and the

cane had become more luxuriant, all indicating the approach to the lower Ghor. The elevated plain or terrace, on each side, could be seen at intervals, and the high mountains of Aljûn were visible in the distance.

At 6.40 P. M., hauled up just above an ugly rapid, which runs by Wady Yâbes (dry ravine).

It looked too hazardous to "shoot" without lightening the boats of the arms, instruments, &c., and there being no near place of rendezvous below, we pitched our tents immediately against the falls and opposite to the ravine.

We have, to-day, passed through the territories of the Emir Nassir el Ghûzzawy, which are two hours in extent, but more than twice the distance along the tortuous course of the river. The tribe musters 300 fighting men. His territory, in size and fertility, surpasses some of the petty kingdoms of Europe.

The Emir and some of his people have wiry hair and very dark complexions, but no other feature of the African. His brother and some of the tribe are bright, but less so than 'Akīl and his followers. The darker colour of the skin may, perhaps, be attributed to the climate of the Ghor.

The hills, forming the banks of the upper terrace, have, to-day, assumed a conical form, with scarped and angular faces, marked with dark bands, and furrowed by erosions. These hills, and the high banks of alluvial deposit, with abrupt and perpendicular faces, indicate that the whole valley has once been covered with water. The prevailing rock seen has been siliceous limestone and conglomerate,—much of the last lying in fragments in the river, covered with a black deposite of oxide of iron and manganese. Towards the latter part of the day, rock was less abundant, alluvion began to prevail, and pebbles, gravel, and sand, were seen beneath the superincumbent layers of dark earth and clay. Just above where we had secured the boats, were large blocks of conglomerate in the stream.

The prevailing trees on the banks have been the willow, the ghurrah, and the tamarisk; the last now beginning to blossom. There were many flowers, of which the oleander was the most

abundant, contrasting finely with the white fringe blossom of the asphodel. Where the banks were low, the cane was ever at the water's edge. The lower plain was covered with a luxuriant growth of wild oats and patches of wild mustard in full flower.

In our course to-day, we have passed twelve islands, all, but three, of diminutive size, and noted fourteen tributary streams, ten on the right and four on the left bank. With the exception of four, they were but trickling rivulets.

We saw many fish, and a number of hawks, herons, pigeons, ducks, storks, bulbuls, swallows, and many other birds we could not identify—some of them of beautiful plumage. At one time, there were a number of moths flitting over the surface of the stream, and we caught one of them. Its body was about the size of a goose-quill, was an inch in length, and of a cream colour, widest at the head, and its wings, like silver tissue, were as long as the body. After frightening the wee thing by our close inspection, we let it go. Just before coming in sight of camp, we observed several tracks of wild boars.

In our route of upwards of twenty miles to-day, we saw the scouts but twice; and, in consequence of the nature of the country, the caravan was compelled to diverge so far from the river, that the guns we fired from time to time at the wild-fowl were unheard.

As we were now approaching the territories of the bad Arabs, and were not far from the place where the boat of poor Molyneux was attacked, every precaution was taken. Our tent was pitched beside a brawling rapid, while all around were lances and tethered horses, betraying the position of the Arabs for the night. On the crest of the hill behind us, the Sherîf was looking out upon the vast plain to the southward, although I had just seen the old man asleep on the ground near our tent. He was the counsellor, and 'Akîl the warrior.

It was a strange sight: collected near us lay all the camels, for security against a sudden surprise; while, in every direction, but ever in close proximity, were scattered, lances and smouldering fires, and bundles of garments, beneath each of which was a

slumbering Arab, with his long gun by his side. The preparations for defence reminded one of Indian warfare.

At night, Sherîf and 'Akîl came to our tent to consult about to-morrow's journey. They stated their suspicions of the tribes through whose territories we were about to pass, and how necessary it would be for the land and the river parties to keep close together. They gave it as their opinion, that it would be impossible for the caravan to proceed on the western shore to-morrow, and advised that early in the morning it should cross over to the eastern side. This course was adopted; and it was agreed that 'Akîl and his scouts should keep along the western, while the caravan took the eastern side,—thus having the boats between, so that one or other of the land parties might be within hearing, and hasten to their rescue, if attacked. It was further agreed, that whenever, by the intervention of the mountains, the land parties were long out of sight of the boats, scouts should be sent to the summits to look out for them, and that two gun-shots, in quick succession, should be the signal, if attacked. They both said that there was not the slightest danger to the land parties, but expressed great solicitude for the boats. Sherîf thought it best for him to be with the caravan to-morrow, as his influence might be of service with the Sheikhs of tribes, should they be inclined to hostilities. From the tortuous course of the river, it was supposed that the caravan on the eastern side would be ever in advance of, while the scouts on the western shore would keep pace with, the boats.

Stationing the sentries, we then retired,—some of us quite exhausted, from frequent vomiting throughout the day. I thought that our Bedawin magnified the danger, to enhance their own importance. But it was well to be prepared.

The course of the river varied to-day from N. E. by N. and N. N. W. to S.,—the true course, from the place of departure this morning to our present camp, S. S. W. The width of the river was as much as seventy yards, with two knots current, and narrowed again to thirty yards, with six knots current:—the depth ranging from two to ten feet. The trees and flowers the same as yesterday.

We struck three times upon sunken rocks during the day, and the last time nearly lost the leading boat: with everything wet, we were at length extricated, in time to direct the channel-way to the Fanny Skinner. The water was slightly discoloured.

When we left the camp, the thermometer stood at 76°; but in a few hours the weather was oppressive.

About five miles nearly due west from the camp, were the supposed ruins of Succoth. To get to this place, Jacob must have made a retrograde movement after meeting Esau, and crossed the Jordan, or recrossed the Jabok.

Saturday, April 15. We were up and off at an early hour this morning, with less than the usual disturbance between the camel-drivers and their insufferable beasts. Of all the burden-bearing beasts, from the Siam elephant to the Himmaleh goat, this "ship of the desert," as he has been poetically termed,—this clumsy-jointed, splay-footed, wry-necked, vicious camel, with its look of injured innocence, and harsh complaining voice, is incomparably the most disagreeable.

Loud have been the praises of its submissive and self-sacrificing spirit, all gentleness and sagacity; its power of enduring hunger and thirst for an indefinite period, and its unwearied tramp day after day through the smiting sun and over the burning sands of the desert; but this animal is anything but patient or uncomplaining. As to the enormous weight it can carry, we have heard it growl in expostulation at a load which the common "kadish" (Syrian pack-horse) would be mortified to have allotted to him as suited to his thews and sinews.

The steady little donkey, with preposterous ears and no perceptible hair on his hide, that leads the trudging caravan, and eats his peck of barley (if he be a lucky donkey), and travels stoutly all day long, is a model for him in endurance; and the most unhappy mule that ever bore pack, or, blindfold, turns the crank of Persian water-wheel, is an example to him of patient meekness and long-suffering. While on the road, *they* do not loiter by the way, dropping their loads and committing trespasses upon the fields of grain, and rarely need to be urged on by the

unceasing cry of "yellah," "hemshe," and the application of the belabouring cudgel of the mukris. While the "djemmel" (camel), with his hypocritical, meek look, his drunken eye, and sunken nether lip, begins to expostulate in a voice discordant with mingled hatred and complaint, from the moment he is forced upon his callous knees, until he clumsily rises with his burden and goes stalking lazily on his road.

The meek enduring look of the camel is a deception; we have seen it refusing the load, or, shaking it off, rise with a roar, and dash furiously at its master, even while its lip was reeking with the fresh and juicy herb he had just gathered for it.

It is a pity to contradict the pleasing accounts given of this friend of the wandering Bedawin, but our opinions have been formed after close observation of its manners and habits in the desert. Much of the ill-nature and obduracy of the camel is doubtless attributable to the almost entire neglect of its owner in providing food and cleansing its hide, so subject to cutaneous diseases.

In the neighbourhood of towns, where it cannot graze, straw is given to it; but in the desert it must crop the thistle or the parched herbage as it passes, straying from side to side in its march, like the yawing of a stately ship before the wind. At night, if it be necessary to keep the camels within the encampment for security, the mukris gather thistles, herbage and dwarf bushes for them, but otherwise turn them loose to graze. There is no question that if the camel were well fed and gently treated, it would sustain the character ascribed to it by partial writers.

The soft, spongy, india-rubber-looking foot of the camel is eaten by the Arabs, and considered a great luxury. Perhaps it is the same dish to which "rare Ben Jonson" alludes, when he describes our ancestors of the sixteenth century as eating—

> "The tongues of carps, dormice, and *camel's heels*,
> Boiled in the spirit of sol."

Leaving the place of encampment for the ford Wacabes, the caravan wound round the base of a low conical sand-hill, and

traversed a small grove of oak and arbutus and a thick and matted undergrowth of brush and briers, with long, keen, penetrating thorns. Here, as had been arranged, 'Akīl and his Bedawin scouts separated from the caravan and proceeded down the western shore; while the latter crossed over to the eastern side.

A little barren island divided the stream at the ford, and the current swept by with such rapidity as to render it doubtful whether the passage could be effected. Mr. Bedlow, however, made the attempt, and succeeded in reaching the island with no greater inconvenience than dripping extremities and a moist saddle. The rest were soon in the stream, clumsy camels and all, breasting and struggling with various success, against the foaming current. There was a singular mixture of the serious and the grotesque in this scene, and the sounds that triumphed above the "tapage" of the boisterous ford, were the yells of the camel-drivers and the cries of the Arabs, mingled with shouts of unrestrained laughter as some impatient horse reeled and plunged with his rider in the stream, and the water was scattered about in froth and spray like a geyser.

The depth and impetuosity of the river caused us some apprehensions for the safety of our cook, Mŭstafa, who, being mounted on an ill-favoured, scrubby little beast, already laden to the ears with the implements and raw materials of his art, was in danger, donkey and all, of being snatched from us, like another Ganymede, by the Epicurean river-gods, or borne away by some deified Apicius, disguised as a donkey, for the little brute looked at times as if he were swimming away, not fording the stream. The tiny animal, as soon as it had achieved the passage, clambered, dripping, up the sloping bank, and convulsively shaking his eminently miscalculated ears, signalised his triumphant exploit by one prolonged, hysterical bray, which startled the wilderness, and seemed to be a happy imitation of a locomotive whistle, and the sound of sawing boards, declining gradually to a sob.

From the river, the banks sloped gradually to the terrace above; presenting a broad and undulating surface of sparse wild oats and weeds, and a few fields of grass, intermingled with low bushes,

and a slender brown fringe of such light and frail structure, as to bend low with the faintest breath of air.

Among this scanty herbage, and yet hidden by it in the distance, the earth was covered with a luxuriant growth of crimson flowers (the anemone), so thickly matted together, that, to the eye, the ground at times seemed covered with a crimson snow. Here and there, among this sea of scarlet bloom, were patches of yellow daisy, looking like little golden islands in the incarnadined and floral ocean; while the bases of the hills were fringed with a light purple blossom, which not inaptly represented the foam of this preternatural sea.

When the wind, sweeping down the gorges of the hills, passed over the plain, a broad band of crimson marked its course; for the wild grain, light and elastic, bent low, and revealed the flowers beneath it,—presenting the appearance of a phantom river of blood, suddenly issuing from the earth, and again lost to sight, to reappear elsewhere at the magic breath of the breeze.

This plain was bounded towards the south by a deep ravine, and on its eastern and western sides it rose, in slight and irregular undulations, to a higher terrace or plateau, which blended with the hills in the distance, and seemed like the slopes of mountains, instead of the elevated plain which we knew it to be. Except upon the banks of the river, there was not a tree to be seen; the sun poured down upon hill, and valley, and stream, a flood of heat and splendour, though as yet it was but early day.

Shortly after passing the rapid, immediately below our place of encampment, the boats were whirled along with great velocity, and barely escaped a rock near the water's edge, and directly in the channel. The stream was fringed with trees of the same variety as have been heretofore noticed, and we began to meet with many false channels, which rendered our navigation more tedious and difficult.

In order that no feature of the river might be omitted, I noted every turn in the course, the depth, the velocity, and temperature of the river; the islands and tributary streams; the nature of its banks; the adjacent scenery when visible; the trees, flowers,

weeds, birds, and tracks of wild beasts. As all this would be tedious in perusal, however necessary for the construction of a chart, and an accurate knowledge of the river, I have embodied it in an Appendix to the official report.

At 8.34, started from below the rapid. In half an hour, we passed Wady el Hammâm (ravine of the bath), with a small stream coming down on the right or western side. It is a slender thread of water finding its way down a chasm, a world too wide for its little stream; but, joined here and there in its meandering descent by tiny tributaries, it comes rattling down its pebbly bed, with the brawling joyousness of a mountain stream. Soon after, came to an ugly rapid, by Wady el Malakh (ravine of salt), with a small stream of clear but brackish water running down from W. N. W. Beheld 'Akīl and some of the scouts upon a hill beyond it. Stopped to examine the rapid for a passage. Saw tracks of a tiger upon the shore, and found some plants of the ghurrah, its leaves triangular-shaped, of a light green colour, their inner surfaces coated with a saline efflorescence: the upper parts of the stem purple, the new growth a light green: the taste of the stem and leaves salt and bitter. The fennel was also quite abundant, the stalks of which, Jŭmâh, our Arab friend, ate greedily. There were some large blocks of fossil rock on the right bank, and in the bed of the river, of which we collected specimens. The temperature of the brackish stream was 70°.

At 11.30 A. M., we stopped to take a meridian observation of the sun. Temperature of the air, 82°; that of the river, at twelve inches below the surface, at which depth it is always taken, 74°. The heat was exceedingly oppressive for the thermometrical range; for, the wind being excluded by the lofty hills and overhanging trees, it was ever a perfect calm; except when, at times, it came in squalls down the yawning ravines.

The plain above the ravine was much broken, presenting abrupt mounds and sand-hillocks, covered with varieties of the thistle, some of which were peculiar from the sabre shape of their thorns, and the rough and hairy coating of the leaves; the latter emitting a milky fluid when broken. The thorn-bushes were so large and

so abundant as to look like apple-orchards. The sides of the ravine exposed conglomerate rocks.

The hills preserved their conical shapes, with bald faces, and the water was becoming of a light mud, approaching a milk colour.

Except during the heat of mid-day, when every living thing but ourselves had sought refuge in the thicket or in the crevices of the banks, there were birds flying about in all directions.

At 1.30 P. M., we stopped to take a sketch of the extraordinary appearance of the terraces of the Jordan.

The mountains towards the east assumed a gloomy aspect to-day, and stood out like rough and verdureless crags of limstone. Yet, when the eye could withstand the bright glare of the illuminated cliffs and jagged ridges, it detected many portions which seemed susceptible of cultivation; and when breaks in the calcined rocks caught the intense brilliancy, and reflected it into the deep gorges, patches of verdure relieved the arid monotony; but the scene, from the blinding light, permitted no minute investigation.

At 2.34, saw the caravan halted on the bank. Came to and pitched our tents at the ford of Sŭk'wâ, on the left or eastern bank, abreast of two small islands. The plain extended six or eight miles on the eastern, and about three-fourths of a mile on the western side. The place of encampment takes its name from a village of the Sŭkrs, two miles distant.

'Akīl was on friendly terms with this tribe, and some of them, who had just come in, stated that their village was last night attacked by about two hundred Bedawin, who killed several of their men, and carried off nearly all their horses, cattle, and sheep.

About eighteen miles E. by N. are the ruins of Jerash, supposed to be the ancient Pella, to which, Eusebius states, the Christians were divinely admonished to fly, just before the siege of Jerusalem by Titus. With Gadara (Um Keis), it was one of the cities of the Decapolis. It has magnificent ruins, many of them churches, and we deeply regretted our inability to visit them. Its situation is said to be the most beautiful, and its ruins the most interesting, in all Syria. What a field the Hauran presents for exploration!

This was a most solitary day's travel. We had not seen the caravan from the time of starting until now, and 'Akīl and his party were visible but once. With the last exception, we did not see a human being. The caravan was a little more fortunate. Shortly after crossing the wady El Malakh (salt ravine), they discovered a solitary plane tree (dilbeh), gnarled and twisted by the action of the winds, its only companions the crimson poppy and the golden daisy, which clustered round its protruding roots like parasites. Their attention was instantly drawn to this solitary tree, for beneath its scanty shade, they saw the glitter of a spear-head, and soon after, two Bedawin horsemen, who came forth, and, hastening in another direction, were soon lost in the thick copse-wood which lined the ravine. For an instant, our Arabs drew the rein and consulted among themselves, when four or five started off at headlong speed in pursuit. Making a long detour to intercept the strange horsemen, they plunged into the ravine, and, like those they pursued, were soon lost to sight in the thick foliage that skirted its sides.

This incident created more excitement than one so trifling would seem to justify; but we were wanderers in an unknown and inhospitable wilderness, among barbarous tribes of Arabs, where the only security against rapine and murder is strength of numbers and efficiency of weapons, and where the sight of a stranger to the party prompts each one instinctively to feel for his carbine, or grasp unconsciously the hilt of his sword.

The strange horsemen proved to be friendly Benì Sŭkrs on their way to Beîsan.

Crossing the ravine of 'Ajlûn, with a considerable stream running down, they met some agricultural Arabs, one of whom kissed Sherîf's hand. From the southern side of the ravine, they saw an immense plain stretching towards the Dead Sea. Far off was also visible the village of Abu 'Obeideh, containing the tomb of a General of Muhammed; some say of a great Sultan of Yemen, who died on his way from Arabia Felix to Damascus. While crossing an extensive plain before halting, they saw many very large thistles in full bloom, the flowers various and beautiful; and

a prevailing yellow flower, called "murur" by the Arabs. Just before camping, they passed large fields of wheat and barley, fast ripening.

Although the day was some hours past its meridian, the weather was exceedingly sultry, and the eye ached from the reverberated glare of light it had encountered since morning.

There was something in this solitude—in these spots forsaken and alone in their hopeless sterility and weird silence—that begat reflection, even in the most thoughtless. In all this dreary waste there was no sound; for every living thing had retired, exhausted, from the withering heat and blinding glare. Silence, the fit companion of desolation, was profound. The song of a bird, the chirrup of a grasshopper, the drone of a fly, would have been out of harmony. The wind, without which even solitude is incomplete, sounded mournfully as it went sweeping over the barren plain, and sighed, even in the broad and garish day, like the blast of autumn among the marshy sedge, where the cold toad croaks, and the withered leaf is spotted like a leprosy.

Here, the eye looked in vain for the soft and tender sky, so often beheld in utter listlessness in our own far-distant land, and yet, dull and ungrateful that we were, we had remained untouched with the beauty of its transparent and penetrable blue—pure azote and oxygen — into the immeasurable depths of which the eye pierced and wandered, but to return to earth again dazzled and unfixed, as though it had caught a glimpse of infinity, and, wearied and overpowered, sought the finite and the tangible,—the comprehensible reality of laminated hills, broad plains, deep valleys, and the mountains, broad of girth and firmly rooted. The heavens of more favoured climes,—climes as yet uncursed of God; skies, tender, deep, and crystalline, so profound in their unfathomableness, and, with their lightning and black thundercloud, so terrific in their wrath,—such skies are never seen here.

Here, there is no shifting of the scenes of natural beauty; no ever-varying change of glory upon glory; no varied development of the laws of harmony and truth, which characterises her working elsewhere; no morning film of mist, or low, hanging cloud of

unshed dew; no clouds of feathery cirrus, or white and wool-like pinnacles of cumuli; or light or gorgeous tints, dazzling the eye with their splendours; no arrowy shafts of sunlight streaming through the rifts of drifting clouds; no silvery spikes of morning shooting up in the east, or soft suffusion of evening in the west: but, from the gleam of dawn, that deepens at once into intensity of noon, one withering glare scorches the eye, from which, blood-shot and with contracted pupil, it gladly turns away.

Here, night smoulders the flame which seems to be consuming earth and heaven. Day after day, there is no change. Nature, which elsewhere makes a shifting kaleidescope with clouds, and sunshine, and pure azure, has here the curse of sameness upon her, and wearies with her monotony.

Beneath a sky hollowed above us like a brazen buckler, and refracting the shafts of smiting sunlight, we journeyed on, heeding neither light nor heat, hunger nor thirst, danger nor fatigue; but each day looked cheerfully forward to the time when we should be gathered on the margin of the river,—the tents all spread, the boats fastened to the shore, the watch-fires blazing, and the sound of human voices breaking the tyrannous silence, and giving a home-like aspect to the wilderness.

The character of the whole scene of this dreary waste was singularly wild and impressive. Looking out upon the desert, bright with reverberated light and heat, was like beholding a conflagration from a window at twilight. Each detail of the strange and solemn scene could be examined as through a lens.

The mountains towards the west rose up like islands from the sea, with the billows heaving at their bases. The rough peaks caught the slanting sunlight, while sharp black shadows marked the sides turned from the rays. Deep-rooted in the plain, the bases of the mountains heaved the garment of the earth away, and rose abruptly in naked, pyramidal crags, each scar and fissure as palpably distinct as though within reach, — and yet they were hours away, the laminations of their strata resembling the leaves of some gigantic volume, wherein is written, by the hand of God, the history of the changes He has wrought.

Towards the south, the ridges and higher masses of the range, as they swept away in the distance, were aerial and faint, and softened into dimness by a pale transparent mist.

The plain that sloped away from the bases of the hills was broken into ridges and multitudinous cone-like mounds, resembling tumultuous water at "the meeting of two adverse tides;" and presented a wild and chequered tract of land, with spots of vegetation flourishing upon the frontiers of irreclaimable sterility.

A low, pale, yellow ridge of conical hills marked the termination of the higher terrace, beneath which swept gently this lower plain, with a similar undulating surface, half redeemed from barrenness by sparse verdure and thistle-covered hillocks.

Still lower was the valley of the Jordan! The sacred river! Its banks fringed with perpetual verdure; winding in a thousand graceful mazes; its pathway cheered with songs of birds and its own clear voice of gushing minstrelsy; its course a bright line in this cheerless waste. Yet beautiful as it is, it is only rendered so by contrast with the harsh, dry, calcined earth around. The salt-sown desert!

There is no verdure here that can vie, in intensity or richness, with that which June bestows upon vegetation in our own more favoured but less consecrated land; where the margins of the most unnoticed woodland stream are decked with varieties of tree and shrub in almost boundless profusion.

Here are no plumy elms, red-berried ash, or dark green hazel; no linden, beach, or aspen; no laurel, pine, or birch; and yet, unstirred by the wind, the willow and the tamarisk droop over the glittering waters, with their sad and plume-like tresses; the lily bending low, moistens its cup in the crystal stream, and the oleander blooms and flowers on the banks. Amid the intricate foliage, cluster the anemone and the asphodel, and the tangled copse is the haunt of the bulbul and the nightingale. There is a pleasure in these green and fertile banks, seen far along the slop-

ing valley; a tracery of life, amid the death and dust that hem it in;—

"A thing of beauty and a joy for ever,"

so like some trait of gentleness in a corrupt and wicked heart.

Soon after camping, Sherîf brought to me a fruit or nut which was described by the land party as growing upon a small thorny tree. The fruit is somewhat like a small date, but of an olive-green colour, the bark of the tree smooth, the leaves thin, long, and oval, and of a brighter green than the bark or fruit. It is bitter and acrid to the taste, and is called by our Arabs the "zukkûm," which is declared by the Koran to be the food of infidels in hell. Dr. Robinson, quoting Maundrell and Pocoke, describes it as the "balsam tree," from the nut of which the oil of Jericho is extracted—called by the pilgrims Zaccheus' oil, from the belief that the tree which bears it was the one climbed by Zaccheus. Scripture, as Dr. Robinson states, renders it, with more probability, the sycamore or plane tree. The "zukkûm" is little more than a shrub in height, and its branches are covered with thorns.

One of the land party brought in a leaf of the osher plant, which bears the Dead Sea fruit. It is oval, thick, and of a deep green colour, very much resembling that of the caoutchouc or India-rubber plant; the flower a delicate purple, growing in pyramidal clusters. The fruit was not yet formed. The centre of the unripe stalk is pithy, like the alder, and discharges a viscous milky fluid when cut or broken.

At sunset, bathed in the refreshing waters of the Jordan. Sherîf says that the Muhammedans are divided into two sects, the Shiahs, believing in the Koran only, and the Sunnites, in both the Koran and tradition. In the strict sense of the term they are all Unitarians, and hold Christians as idolaters, for their belief in and worship of the divinity of the Saviour and the Paraclete. They believe in the interposition of angels in human affairs, and in the resurrection and final judgment. They are divided in opinion with regard to purgatory, or an intermediate state after death, and hold Moses, the Saviour, and Muhammed, to have been prophets

of God, the last, the greatest. And yet in his absurd night journey to heaven, Muhammed makes Moses and the other prophets desire his prayers, but asks himself for those of the Saviour. They believe that another, in the semblance of the Redeemer, was crucified in his stead. When I asked Sherîf if he did not think that a good Christian might get to heaven, he answered,

"How can you hope it, when you insult the God you believe in, by supposing that He died the ignominious death of a criminal?"

This people, sensually imaginative, are incapable of a refined, spiritual idea; and the arch-impostor, Muhammed, well understood the nature of his countrymen.

Heretofore, we have been lulled to sleep by the hoarse sound of a rapid; except those who, having to encounter it, felt naturally solicitous for the result. The noise of a rapid is much louder by night; and one a mile off, sounds as if it were madly rushing through the camp. We were now, however, comparatively quiet.

As the attack upon the neighbouring village, last night, showed that bad Arabs were about, and there had been many strangers in the camp during the evening; after all but the sentries had retired to rest, I went round to see that each one had his ammunition-belt on and his weapons beside him; and repeated the injunction to rally round the blunderbuss in the event of an alarm. But the night passed away quietly.

Late in the first watch, an interesting conversation was overheard between 'Akīl and the Nassir.

Last year, while in rebellion against the government, 'Akīl, at the head of his Bedawin followers, had swept these plains, and carried off a great many horses, cattle, and sheep; among them the droves and herds of the Nassir. There had, in consequence, been little cordiality between them since they met at Tiberias; but, to-night, Nassir asked 'Akīl if he did not think that he had acted very badly in carrying off his property. The latter answered no; that Nassir was then his enemy, and that he, 'Akīl, had acted according to the usages of war among the tribes. The Nassir then asked about the disposition made of various animals,

and especially of a favourite mare. 'Akīl said that he had killed so many of the sheep, given so many away, and sold the rest; the same with the cattle and horses. As to the mare, he said he had taken a fancy to her, and that it was the one he now rode. This the Emir knew full well.

After some further conversation, Nassir proposed that they should bury all wrongs and become brothers. To this 'Akīl assented. The former, thereupon, plucked some grass and earth, and lifting up the corner of 'Akīl's āba, placed them beneath it; and then the two Arabs embracing, with clasped hands, swore eternal brotherhood.

When questioned, immediately after, upon the subject, 'Akīl stated that so obligatory was the oath of fraternity, that should he hereafter carry off any thing from a hostile tribe, which had once, no matter how far back, been taken from the Emir, he would be bound to restore it.

As an instance, he mentioned that when he was in the service of Ibrahim Pasha, there were nine other tribes besides his own; and that in one of their expeditions they carried off a number of sheep, forty of which were assigned as his portion; that shortly after, an Arab came forward and claimed some of them on the ground of fraternization. 'Akīl told him that he did not know and had never seen him before; but the man asserted and proved that their fathers had exchanged vows, and the sheep claimed were consequently restored.

These Bedawin are pretty much in the same state as the barons of England and the robber knights of Germany were, some centuries back.

We have, to-day, descended ten moderate and six ugly rapids, and passed three tributaries to the Jordan, two quite small, and one of respectable size. Also four large and seventeen small islands. We have now reached a part of the river not visited by Franks, at least since the time of the crusades, except by three English sailors, who were robbed, and fled from it, a short distance below. The streams have all names given them by the Arabs, but the islands are nameless and unknown.

The course of the river, to-day, has varied from north-west to south, and from thence to east; but the prevailing direction has been to the southward and westward. The velocity of the current has ranged from two to eight knots per hour; the average about three and a half knots. The depth has been in proportion to the width and velocity of the stream. At one place the river was eighty yards wide and only two feet deep. The average width has been fifty-six yards, and the average depth a little more than four feet.

Where the river was narrow, the bottom was usually rock or hard sand, and in the wider parts soft mud. In the narrowest parts, also, the river flowed between high banks; either bald-faced alluvial hills, or conglomerate,—in one place, fossil rock. Where the stream was wide, the banks were low alluvion; towards the latter part of the day, resting upon sand or gravel. Where the stream was wide and sluggish, running between alluvial banks, the water was discoloured; in some places of a milky hue. Where narrow, and flowing between and over rocks, it was comparatively clear. At starting, in the morning, the temperature of the air was 78°, and of the water, twelve inches below the surface, 71°. In the course of the day, the former rose eight and the latter three degrees. Excepting once, early in the afternoon, when a light air from the eastward swept through an opening, it was a perfect calm, and the heat felt oppressive; yet less so, than the dazzling glare of light. We have twice, to-day, struck on rocks, but suffered no material damage.

Our encampment was close to the river's edge, where the banks were thickly wooded and the soil sandy. In front, the stream was divided by a small island, below which was the ford of Sŭk'wâ.

The scene of camping for the night is ever a busy one. The uprearing of tents, the driving of the tent-pins, the wearied camels standing by, waiting to be disburdened, all remind one forcibly of the graphic descriptions of the Bible. There are other features, too, illustrative of our brotherhood with the children of the desert —Sherîf, seated beneath a tree, or under the shadow of a rock,

issuing commands to his immediate followers, and 'Akīl reconnoitering from the summit of a hill, or scouring about the plain, stationing the outposts.

With us, too, everything bore the aspect of a military expedition through a hostile territory. The boats, when practicable, were securely moored in front, and covered by the blunderbuss; the baggage was piled between the tents, and the sentries paced to and fro in front and rear.

Among the trees which bordered the river-bank, the horses of our Arab friends were this evening tethered, while our own luxuriously enjoyed a clandestine supper in the wheat-field near at hand.

At this time, our benign and ever-smiling Mŭstafa with his bilious turban and marvellous pants, wide and draperied, but not hiding his parenthetical legs, seemed almost ubiquitous. At one time, he was tearing something madly from his laden donkey; and the next, he was filling pipes, and, hand on breast, presenting them with low salaams; or, like a fiend, darting off after the Doctor's horse, which, having evaded the watchful Hassan, was charging upon the others, and frightening "the souls of his fearful adversaries" with the thunder of his nostrils.

The day had been one of intense heat, and the physical relaxation, caused by fatigue and exposure, made us extremely sensitive to the chilly atmosphere of evening.

The pale light of the rising moon, and the red flush of sunset, made the twilight linger, and gave to the east and the west the appearance of an auroral ice-light. The dew fell early and heavily, and the firm white sand of the river-bank was cold to the feet.

As night advanced, the blaze of our watch-fires dispelled, to a great extent, the chill of the air around us. Our Arab scouts were posted on the hills which overlooked the camp, and our own guards, with glittering carbines and long, keen bayonets, were pacing in front and rear of the baggage and the tents. The scene was wild and picturesque.

Around the blazing fires, which shot long, flickering tongues of flame into the night, and seemed to devour darkness, were

gathered in circles, groups of Franks and wild Bedawin, solemnly smoking the chibouque, drinking coffee, or listening eagerly, as, with wild gesticulations, one related an adventure of the day, or personal incident of times gone by. Who, in the desert or the wilderness, would not listen to the veriest idle legend that ever beldame croaked over the blaze of "Yule," on Christmas eve?

The camels were lying here and there about the camp, silent and motionless, utterly unconscious of their merit as objects in the picturesque.

The tents were pitched upon a sandy bank, in a small opening, flanked by groves of willow and tamarisk, with an inner edging of acacia. The ford ran diagonally from bank to bank, across the most impetuous but shallow part of the stream. The bright watch-fires threw bars of red and trembling light over the shadowed waters, and illuminated the sombre willow groves beyond, among which, as if entangled in their boughs, hung motionless, as clouds hang in the chasms of mountains, a long and silvery film of unfallen dew; while the purple shadows of the distant hills mingled with the cold grey of the evening, rendering all beyond dim and mysterious; and the peaked and jagged outlines of the lofty range, cut sharp against the sky, now faint and pale, yet relieved by the beautiful swell and regular waving curvature of the lower hills.

Before the blue tent of Sherîf were gathered our Arab friends, a large circle of swart faces, illuminated by the light of a crackling fire, listening to 'Akīl's bard, who sang Arabic love-songs, to the accompaniment of his rehabeh, or viol of one string.

As we drew near to enjoy this wild, romantic concert, the Sherîf and 'Akīl, stepping forth from the circle, invited us among them, with an urbanity and kindness of manner, unsurpassed by the courtesy of highest civilization. Mats were spread for us at the opening of the tent, and the Tourgiman having interpreted their many expressions of welcome, the bard was requested to continue the music, which had been interrupted by our approach.

Without affecting a slight cough, or making vain excuses, he immediately complied. With his semicircular bow he began a

prelude, "fashioning the way in which his voice should go," and then burst forth in song. The melody was as rude as the instrument which produced it, a music, not such as Keats describes—

"Yearning like a God in pain;"

but a low, long-drawn, mournful wail, like the cry of the jackal set to music. He sang of love, but had it been a dirge, the wail of the living over the dead, it could not have been more heart-rending and lugubrious. There was no passion, no mirthfulness, no expression of hope or fear; but a species of despairing, chromatic anguish; and we could not refrain from regarding the instrument as an enchanted sexton's spade, singing of the graves it had dug, and the bodies it had covered with mould.

And yet, these children of the desert enjoyed the performance, and from under the dark brows, made darker by the low, slouching koofeeyah, their eyes glistened, and the red light gleamed on glittering teeth displayed in smiles of approbation.

These demonstrations of enjoyment appeared strange to us; for the song, to our ears, told only of mattocks and shrouds and the grave-digger's song in Hamlet;—

"A pickaxe and a spade, a spade,
For ——, and a winding sheet."

The bard was not a true Bedawy, but of Egyptian parentage, and resembled more our ideas of a ghoul than a human being. Low of stature and slightly built, he was thin, even to attenuation; and his complexion of a pale, waxy, cadaverous hue. His eyes were small, black, and piercing, shadowed by thick pent-house brows, which, like his straggling beard, was nearly red; his lips were livid, his teeth white and pointed, and the nails of his skinny hands as long as talons. His whole appearance assisted materially in sustaining the ideas of coffins and palls, mildew and worms, and other grave-yard garniture.

The costume of the minstrel was not materially different from that of his Bedawin companions. His head, like theirs, was closely shaven above the temples, and covered with a small red

skull-cap or tarbouch, over which was thrown the koofeeyeh, a coarse cotton shawl or kerchief, with broad stripes of white and yellow, triangularly folded, the ends ornamented with a plaited fringe, hung on each side of the face down to the shoulders, and was confined over the tarbouch by two bands of the akàl, a roughly twisted, black cord of camel's hair. An āba, or narrow cloak made of camel's hair, of extremely coarse texture, broadly striped white and brown, and fashioned like the Syrian burnoose, or horseman's cloak, hung negligently about his person.

Beneath the āba he wore a long, loose cotton shirt, of very equivocal white, confined at the waist by a narrow leathern belt; and a pair of faded red buskins,

"A world too wide for his shrunk shanks,"

and fearfully acute at the toes, where they curved like a sleigh-runner, completed his costume.

While the bard and his rehabeh discoursed most melancholy music for our entertainment, the black and aromatic kahweh[1] (coffee) was handed round by an attendant of 'Akīl Aga,—a tall, wiry-framed Nubian, with keen white teeth, and a complexion as black as Orcus,—black even to the surface of the heavy lips, and with a skin drawn with extreme tension over the angular facial bones, giving it the dry and embalmed appearance of a Memphian mummy.

Each of us having drunk his little cup of coffee and smoked a pipe, the stem of which had run the gauntlet of every pair of lips in that patriarchal group, we were about to retire, when the Emir Nassir, the wild, old blackguard, seizing (he never took anything) the "sexton's spade" (the rehabeh), to our unfeigned astonishment, commenced a song, as if he too were a ghoul and could give us in character some church-yard stave in honour of his ghostly trade.

[1] Kahweh is an old Arabic term for *wine;* Turkish, *kahveh;* Italian, *caffé,* French, *café;* English, coffee. Can it be that the Muslims, in their affection, preserved the name of the beverage interdicted by their prophet?

Translated by the Tourgamin, and versified by Mr. Bedlow, his song ran thus:

"At her window, from afar,
I saw my love, my Bedawîyeh,
Her eyes shone through her white kināa,
It made me feel quite faint to see her."

While singing, the Ogre Prince looked with grotesque devotedness and an inimitable languishing air upon Sherîf Musaid, sitting near him, who, for the nonce, he had idealized into his "love," his "Bedawîyeh." The song was evidently a foreign one, perhaps derived from Persia. An Arab poet would have placed his love at the opening of the tent, or beside the fountain. A Bedawîyeh, the fawn of the desert, and a window, the loop-hole of what they consider a prison, accord but ill together.

The amateur musician surpassed the professional one, and the prince transcended the bard, as well in execution as in the quality of his voice. The music, although more varied in character and modulation, was essentially the same in its prevailing sadness. Truly "all the merry-hearted do sigh" in this strange land; a land from which "gladness is taken away," and mirth, where it doth exist, hath a dash of grief and a tone of desperate sorrow. The sound of tabret and harp, of sackbut and psaltery, the lute, the viol, and the instrument of two strings, are heard no more in the land; and the "rehabeh," with its sighing one string, befits the wilderness and the wandering people who dwell therein.

Not even the Emir, although he threw all the mirth he could command into his voice, and touched the string with quick, elastic fingers, striking out notes and half-notes with musical precision; —although his dark eyes flashed and his white teeth glistened, as he smiled seductively upon Musaid, and swayed his body to and fro, and nodded his head to the measure of his minstrelsy, and triumphed over the bard, and won applause with every verse, he *could not* change the tone,—there was the same sad minor running through the song.

Those low, complaining notes lingered in our ears long after

the sound had ceased, and the Arabs were gathered in sleep around the smouldering watch-fires.

Towards morning, the wind swept down upon us from the mountain gorges, and caused some of us to dream of snow-drifts and icicles, and unseasonable baths in cold streams.

CHAPTER XI.

FROM FORD OF SŬK'WÂ TO PILGRIM'S FORD.

SUNDAY, April 16. A pleasant day—wind light from north-east. We were on the move early this morning. Sherîf was very uneasy about the boats; and yet thought it advisable for him to be with the caravan. He was urgent that the Emir should accompany us on the river. The latter excused himself on the plea of headache.

After a cup of coffee, taken standing, started off with the boats, leaving the caravan to cross over again, and proceed down the right bank.

I found that our Arabs were utterly ignorant of the course of the river, or the nature of its current and its shores. Heretofore, we had been enabled to see the caravan at least once in a day's journey; but, yesterday, from the impossibility of penetrating along the left bank and the high precipitous character of the hills on the right, we saw nothing of them, and our meeting even at night, was, for a long time, very doubtful.

The country presented the same appearance as yesterday, except that conglomerate or any kind of rock was rarely seen; but, in their stead, banks of semi-indurated clay. The lower plain was evidently narrower and the river often swept alternately against the hills, mostly conical in their shape, and with bald

faces, which flank the lower and mark the elevation of the upper plain.

These various ramifications of mountain ranges and intervening platforms and valleys afford, according to Humboldt, evidences of ancient volcanic eruptions undergone by the crust of the globe, these having been elevated by matter thrust up in the line of enormous cracks and fissures.

The vegetation was nearly the same in character, save that it was much more luxuriant and of brighter tint on the borders of the stream; more parched and dull on either side beyond it. The oleander increased; there was less of the asphodel, and the acacia was rarely seen, as heretofore, a short distance inland. The tamarisk was more dense and lofty, and the canes were frequently thick and impenetrable. There were many drift-trees in the stream, and bushes and branches were lodged high up in the trees which lined the banks; and much above the latter, conclusive marks of a recent freshet. There were many trees on each side, charred and blackened by fire — caused, doubtless, by the Arabs having burned the dried-up grass to renew their pastures. The ghurrah was also becoming abundant; and we noticed that whenever the soil was dry, the leaves of this tree were most silvery.

About an hour after starting, we came to the place where Molyneux's boat was attacked while he was journeying down by land. Stopped to examine. It is just above a very rapid part of the river, where the boat could not have been stopped if the crew had kept her in the stream, unless most of them had been killed by gunshots from the shore. As they all escaped, I concluded that they were surprised when asleep, or loitering on their way. We here saw tracks of a tiger, and of other wild beasts which we could not identify.

In many places the trees were drooping to the water's edge, and the channel sometimes swept us under the branches, thereby preventing us from carrying our awnings; in consequence of which, we suffered more than heretofore from exposure to the sun.

At 8.30, there were Arabs in sight on a high hill, and we heard

others in the swamp ; apprehending a stratagem, we laid on the oars and stood by our arms ; but we were not molested.

In an hour, saw again tracks of wild animals on shore, and struck upon a snag, the current very strong. Soon after, saw some of our scouts on a hill. Stopped to take meridian observations. Temperature of the air, 92° ; of the water, 72°.

At 12.05, started again, and were hailed by Arabs on a high hill to the right, asking whether the horsemen who had passed were friends or enemies. We supposed that they referred to our scouts. Again saw tracks of wild animals upon the shore ; also a great many wild pigeons, some of them very large. The banks, hereabouts, were of red clay, resting on white ; the last, semi-indurated, and appearing like stone. There were many fissures in the hills, and much debris fallen into the stream.

Shortly after, passed under an overhanging tree, with a bush fifteen feet up in its branches, lodged there by the recent freshet ; for it was deciduous, and the green leaves of the early season were upon it. The river must this year have overflowed to the foundations of the second terrace. We saw some drooping lily-plants, long past their flowering.

At 2 P. M., the river running between high triangular hills, we struck in descending a rapid ; clothes, note-book, and papers, thoroughly wet, but the boats uninjured.

Soon after, came in sight of the encampment, the tents, as heretofore, already pitched ;—the camping-place, Mukutta Damieh (Ford of Damieh), where the road from Nabulus to Salt crosses the river.

We made but a short day's journey, in consequence of there not being another place where the boats and caravan could meet between this and the bathing-place of the Christian pilgrims.

Soon after our arrival, both Sherîf and 'Akîl, calling me aside, expressed their belief that the Emir feigned a headache in the morning from fear of going in the boats. The same idea had occurred to me before, but was dismissed as an ungenerous one. They, however, cited circumstantial but conclusive proof that their suspicion was not unfounded.

In the early part of their march to-day, the caravan anticipated a skirmish. A strange Arab, supposed to belong to a marauding party, was seen in the distance. The line was closed and the scouts came in, all but a few that were sent to reconnoitre a deep ravine in front. Although but one man was seen, it was suspected that many were concealed in the ravine; for directly opposite was a large encampment of black tents.

Our Bedawin felt or feigned a conviction that an engagement would take place, and all due preparations were immediately made. The camels were halted, and the horsemen, collecting in front, waited for the reconnoitering scouts to return. In the mean time, our Arabs went through their feats of horsemanship, singing their war-song, and seemed to be endeavouring to work themselves into a state of phrensy. At their solicitation, Mr. Dale laid aside his hat and put on a tarbouch and koofeeyeh. Guns were unslung and freshly capped, and swords were loosened in their scabbards.

The other party, however, kept aloof, proving neither hostile nor friendly, and 'Akil, as he passed, contemptuously blew his nose at them. They were believed to belong to the tribe El Bely or El Mikhâil Meshakâh, whose territories were hereabouts. Doubtless, they were the same who hailed us, to know whether the horsemen who had passed were friends or enemies.

After dinner, some of the party crossed the river to examine the ruins of a bridge, seen by the land party from the upper terrace, just before descending to the river. They had to force their way through a tangled thicket, and found a Roman bridge spanning a dry bed, once, perhaps, the main channel of the Jordan, now diverted in its course. To the best of our knowledge, this bridge has never before been described by travellers.

We were amused this evening at witnessing an Arab kitchen in full operation. The burning embers of a watch-fire were scraped aside, and the heated ground scooped in a hollow to the depth of six or eight inches, and about two feet in diameter. Within this hole was laid, with scrupulous exactness of fit and accommodation to its concave surface, a mass of half-kneaded

dough, made of flour and water. The coals were again raked over it, and the fire replenished. A huge pot of rice was then placed upon the fire, into which, from time to time, a quantity of liquid butter was poured, and the compound stirred with a stout branch of a tree, not entirely denuded of its leaves. When the mess was sufficiently cooked, the pot was removed from the fire, the coals again withdrawn, and the bread taken from its primitive oven. Besmeared with dirt and ashes, and dotted with cinders, it bore few evidences of being an article of food. In consistency, as well as in outward appearance, it resembled a long-used blacksmith's apron, rounded off at the corners. The dirtiest ash-pone of the southern negro would have been a delicacy, compared to it.

The whole party gathered round the pot in the open air, and each one tearing off a portion of the leather-bread, worked it into a scoop or spoon, and, dipping pell-mell into the pilau, made a voracious meal, treating the spoons as the Argonauts served their tables, eating them for dessert. With a foot-wash in the Jordan, they were immediately after ready for sleep, and in half an hour were as motionless as the heaps of baggage around them.

Monday, April 17. At an early hour, Mŭstafa, shivering and yawning, was moving about in preparation of the morning meal. Long before the sun had risen over the mountains of Gilead, the whole encampment was astir, and all was haste, for there was a long day's work before us.

Although the air was damp and chilly, we knew, from past experience, that before noon the sun would blaze upon us with a power sufficient to carbonize those who should be unprotected from its fierceness. Moreover, from the plateau behind our camp, we could see nothing towards the south but rough and barren cliffs, sweeping into the purple haze of the lower Ghor. And the rolling sand-hills, which form the surface of the upper plain, stretched far along the bases of the mountains without a mark of cultivation, or the shelter of a tree. Heretofore, we had seen patches of grain, but there were none now visible, and all before us was the bleakness of desolation.

The banks of the river, too, were less verdant, except immediately upon the margin, and the vegetation was mostly confined to the ghurrah, the tamarisk, and the cane; the oleander and the asphodel no longer fringed the margin, and the acacia was nowhere seen upon the bordering fields.

Settled with the Emir for the services of his followers and himself, and dismissed them.

With a bite and a sop from Mŭstafa's frying-pan, we were off at an early hour. The river, one hundred and twenty feet wide and seven deep, was flowing at the rate of six knots down a rapid descent.

We soon passed two large islands, and saw tracks of wild beasts on the shore.

Many large trees were floating down, and a number were lodged against the banks, some of them recently uprooted, for they had their green leaves upon them, and, as on yesterday, there were some small ones lodged high up in the branches of the overhanging trees. The banks were all alluvion, and we began to see the cane in blossom. Altogether, the vegetation was more tropical than heretofore.

At 9 A. M., quite warm. Many birds were singing about the banks and under cover of the foliage, but we saw few of them; now and then some pigeons, doves, and cranes, and occasionally a bulbul. Stopped to examine a hill, and collected specimens of semi-indurated clay, coated with efflorescence of lime. The bases of the ridges on each side presented little evidences of vegetation or fertility of soil, notwithstanding their proximity to the river. A few scrubby bushes were scattered here and there, exhibiting the utter sterility of the country through which we were journeying.

Fields of thistles and briars occasionally varied the scene; and their sharp projecting thorns bore the motto of the Gael, "Nemo me impune lacessit."

The hills which bounded the valley were immense masses of siliceous conglomerate, which, with occasional limestone, extended as far as the eye could reach, showing the geological formation

of the Ghor from Lake Tiberias to the Dead Sea, where the limestone is said to preponderate.

High up in the faces of these hills were immense caverns and excavations, whether natural or artificial we could not tell. The mouths of these caves were blackened, as if by smoke. They may be the haunts of predatory robbers. At 11.40, stopped for meridian observation, near a huge conglomerate rock.

At 1.20 P. M., came to the River Jabok (Zerka), flowing in from E. N. E., a small stream trickling down a deep and wide torrent bed. Stopped to examine it. The water was sweet, but the stones upon the bare exposed bank were coated with salt. There was another bed, quite dry, showing that in times of freshet there were two outlets to this tributary, which is incorrectly placed upon the maps.

There was much of the ghurrah, which seems to delight in a dry soil and a saline atmosphere. The efflorescence on the stones, and on the leaves of the ghurrah, must be a deposition of the atmosphere, when the wind blows from the Dead Sea, about twenty miles distant, in a direct line.

It was here that Jacob wrestled with the angel, at whose touch the sinew of his thigh shrunk up. In commemoration of that event, the Jews, to this day, carefully exclude that sinew from animals they kill for food.

This river, too, marks the northern boundary of the land of the Ammonites.

At 1.30, started again, and soon after saw a wild boar swimming across the river. Gave chase, but he escaped us.

Passed a dry torrent-bed on the right, probably the Wady el Hammâm, which separated the lands of the tribe of Manasses from those of the tribe of Ephraim. Still opposite to us was the land of the tribe of Gad. On that side, about twenty miles distant, was Amman, Rabbath Ammon, the capital of the Ammonites The country of Ammon derived its name from Ben-Ammi, the son of Lot.

Descending wild and dangerous rapids, and sweeping along the base of a lofty, perpendicular hill, we saw a small stream on

the left; stopped to examine it; found the water clear and sweet; temperature, 76°.

Suddenly we heard, and soon after caught glimpses of, an Arab in the bushes on the left; at the same time a number of Arabs were calling loudly to us from a hill on the right. Stopped for the other boat to close in, and prepared for a skirmish; at this moment there was a shot from above, and concluding that the other boat had been fired upon, I directed the men to shoot the first objects they saw in the bushes. Fortunately the man we had first seen had now become alarmed and concealed himself; and immediately after, the Fanny Skinner hove in sight, having stopped a moment to fire at a bird. The man in the bushes proved to be a messenger sent by the Arabs on the hill to show us the place of rendezvous for the night. They had been spoken by the caravan as it passed; and their messenger, instead of selecting a conspicuous place on the right bank, had crossed over, and was floundering through the thicket when we came upon him.

This Arab was sent by the sheikh of Huteim, a tribe near Jericho, and brought from him a present of oranges, and a thin, paste-like cake made in Damascus, of debs (a syrup from grapes), starch, and an aromatic seed, I think the sesame. The oranges were peculiarly grateful after the heat and fatigue of the day. The cake was very good if you were very hungry, and, like the marchioness's lemonade, excellent, if you made-believe very hard.

The sun went down and night gradually closed in upon us, and the rush of the river seemed more impetuous as the light decreased. We twice passed down rapids, taking care each time to hug the boldest shore. Besides the transition from light to darkness, we had exchanged a heated and stifling for a chilly atmosphere; and while the men, more fortunate, kept their blood in circulation by pulling gently with the oars, the sitters in the stern-sheets fairly shivered with the cold.

There had been such a break-down in the bed of the stream since we passed the Jabok, and such evident indications of volcanic formation, that we became exceedingly anxious. In the obscure gloom, we seemed to be stationary, and the shores to

flit by us. With its tumultuous rush the river hurried us onward, and we knew not what the next moment would bring forth—whether it would dash us upon a rock or plunge us down a cataract. The friendly Arab, although he knew the fords and best camping-places on the river, in his own district, was, like every one we had met, wholly unacquainted with the stream at all other points.

Under other circumstances it doubtless would have been prudent to lie by until morning; but we were all wet, had neither food nor change of clothing, and apart from danger of attack in a neighborhood represented as peculiarly bad, sickness would have been the inevitable consequence of a night spent in hunger, cold and watchfulness.

At 9.30 P. M. we arrived at "El Meshra," the bathing-place of the Christian pilgrims, after having been fifteen hours in the boats. This ford is consecrated by tradition as the place where the Israelites passed over with the ark of the covenant; and where our blessed Saviour was baptized by John. Feeling that it would be desecration to moor the boats at a place so sacred, we passed it, and with some difficulty found a landing below.

My first act was to bathe in the consecrated stream, thanking God, first, for the precious favour of being permitted to visit such a spot; and secondly for his protecting care throughout our perilous passage. For a long time after, I sat upon the bank, my mind oppressed with awe, as I mused upon the great and wondrous events which had here occurred. Perhaps directly before me, for this is near Jericho, "the waters stood and rose up upon an heap," and the multitudinous host of the Israelites passed over,—and in the bed of the stream, a few yards distant, may be the twelve stones, marking "the place where the feet of the priests which bare the ark of the covenant stood."

Tradition, sustained by the geographical features of the country, makes this also the scene of the baptism of the Redeemer. The mind of man, trammelled by sin, cannot soar in contemplation of so sublime an event. On that wondrous day, when the Deity veiled in flesh descended the bank, all nature, hushed in awe,

looked on,—and the impetuous river, in grateful homage, must have stayed its course, and gently laved the body of its Lord.

In such a place, it seemed almost desecration to permit the mind to be diverted by the cares which pressed upon it—but it was wrong—for next to faith, surely the highest Christian obligation is the performance of duty.

Over against this was no doubt the Bethabara of the New Testament, whither our Saviour retired after the Jews sought to take him at the feast of the dedication. The interpretation of Bethabara, is "a place of passage over." Our Lord repaired to Bethabara, where John was baptizing; and as the ford probably derived its name from the passage of the Israelites with the ark of the covenant, the inference is not unreasonable that this spot has been doubly hallowed.

In ten minutes after leaving the camping-ground this morning, the caravan struck upon the plain and crossed the wady Fariâ, pursuing a S. by W. course. Across the ravine, they saw a young camel browsing among the brown furze and stunted bushes, which, in these plains, serve to protect the scanty vegetation from the intense heat of the sun. This creature had evidently strayed from some fellahin encampment, or had been abandoned by its owners when pursued by the Bedawin, many of whom had been seen the day previous on the eastern side of the Jordan. The camel being quite wild, racked off at full speed on their approach, and the scouts immediately started in pursuit. Its motion in running, although awkward, was exceedingly rapid; dashing ahead at a long and stretching pace, and outstripping most of the horses in pursuit. Its whole body swayed regularly with its peculiar racking motion, as before remarked, exactly like the yawing of a ship before the wind. Whether it walks or runs, the camel ever throws forward its hind and fore leg on the same side and at the same time, as a horse does in pacing. The fugitive was soon caught, and true to its early teaching, knelt down the moment a hand was placed upon its neck. 'Akīl, abandoning his mare, mounted the prize, and, without bridle or halter, dashed off at full speed over the plain to increase the number of

our beasts of burden. The high peak of "Kurn Sûrtabeh," "horn of the rhinoceros," bore W. ¼ N. from this point of their progress.

Crossing Wady el Aujeh, they pursued a southerly course; the faces of the mountains broken here and there with dark precipices, which gradually assumed a dark brown and reddish hue, with occasional strata resembling red sandstone.

Beyond Wady el Aujeh, the soil bore a scanty crop of grass, now much parched; and to the right, where the mountains receded from the plain, there were extensive fields of low, scrubby bushes, powdered with the clay-dust of the soil; on the left, was a blank desert, with one or two oases, and a waving line of green, where the Jordan betrayed itself, at times, by a glitter like the sheen from bright metal.

It was now mid-day, and the heat and blinding light of the sun were almost insupportable: they were obliged to stop to rest the wearied caravan, the Arabs making a tent of their ābas, supported on spears.

At 1 P. M., they were again in motion, and, passing through a field of wild mustard, came to an open space, nothing but sand and rocks—a perfect desert—where were traces of a broad-paved road, which they believed to be Roman. At 3 P. M., for the first time, they saw some gazelles, and gave chase to them. At a low whistling noise made by one of the Arabs, the affrighted creatures stopped, and looked earnestly towards them; but, owing to an incautious movement, they took to flight, and went bounding over the hills beyond the possibility of pursuit.

Crossing Wady el Abyad, they passed through a grove of nûbk and wild olive, and came upon a ruined village. Shortly after, they stopped to water in the Wady Na-wa'imeh, with a shallow stream of clear, sweet water. Thence leaving the Quarantania (reputed to be the mountain of our Saviour's fasting and temptation) on the right, and passing east of the fountain healed by Elisha, and of Jericho, they came to Ain el Hadj (Pilgrim's fountain), in the plain of Gilgal. Here they were joined by a few Riha (Jericho) Arabs, all having long-barrelled guns, with extra-

ordinary crooked ram's-horn powder-flasks. Of Jericho, the first conquest of the Israelites west of the Jordan, and where Herod the Great died, but a solitary tower remains (if, indeed, it be the true site). How truly has the curse of Joshua respecting it been fulfilled! Here the wilderness blossomed as the rose. A broad tract was covered with the olive, the nûbk, and many shrubs and flowers. From it they had the first view of the Dead Sea, and the grim mountains of Moab to the south-east. There were few evidences of volcanic agency visible, but the calcined and desolate aspect indicated the theatre of a fierce conflagration;—the cliffs, of the hue of ashes, looking as if they had been riven by thunderbolts, and scathed by lightning.

Pursuing a south-easterly course, they passed a broad tract of argillaceous soil, rising in fantastic hills, among which they started a coney from its form. At 5 P. M., they came upon the banks of the river, excessively wearied, having been eleven hours in the saddle.

The tents had been pitched by the land-party before we arrived, directly on the bank, down which the pilgrims would, early in the morning, descend to the river. Mr. Dale had objected to pitching them on this spot, but our Arabs assured him that the pilgrims would not arrive until late to-morrow. The night was already far advanced, and the men were so weary, that I thought it best to postpone moving the tents until the morning.

After a slight and hurried meal, we stationed sentries, and threw ourselves, exhausted, upon the lap of mother earth, with the tent our covering, and whatever we could find for pillows.

During the night there was an alarm.—We sprang from the tents at the report of a gun, and found our Arab scouts on the right hailing some one on the opposite bank; upon whom, contrary to all military usage, they had previously fired. It proved to be a fellah, attempting to cross the ford, which was too deep.

The alarm, although a false one, had the good effect of showing that all were upon the alert. At this time, it is said, there are always a great many Arabs prowling about, to cut off pilgrims straying from the strong military escort which accompanies them

from Jerusalem, under the command of the Pasha, or an officer of high rank.

We have, to-day, according to 'Akīl, passed through the territory of the Beni Adwans and Beni Sūkr's, and into those of the wandering tribes of the lower Ghor. On the opposite side is "the valley over against Beth-peor," where the Israelites dwelt before they crossed the Jordan.

In the descent of the Jordan, we have, at every encampment but one, determined its astronomical position, and its relative level with the Mediterranean; and have, throughout, sketched the topography of the river and the valley. The many windings of the river, and its numerous rapids, will account for the difference of level between Lake Tiberias and the Dead Sea.

Tuesday, April 18. At 3 A. M., we were aroused by the intelligence that the pilgrims were coming. Rising in haste, we beheld thousands of torchlights, with a dark mass beneath, moving rapidly over the hills. Striking our tents with precipitation, we hurriedly removed them and all our effects a short distance to the left. We had scarce finished, when they were upon us:—men, women, and children, mounted on camels, horses, mules, and donkeys, rushed impetuously by towards the bank. They presented the appearance of fugitives from a routed army.

Our Bedawin friends here stood us in good stead;—sticking their tufted spears before our tents, they mounted their steeds and formed a military cordon round us. But for them we should have been run down, and most of our effects trampled upon, scattered and lost. Strange, that we should have been shielded from a Christian throng by wild children of the desert—Muslims in name, but pagans in reality. Nothing but the spears and swarthy faces of the Arabs saved us.

I had, in the mean time, sent the boats to the opposite shore, a little below the bathing-place, as well to be out of the way as to be in readiness to render assistance, should any of the crowd be swept down by the current, and in danger of drowning.

While the boats were taking their position, one of the earlier bathers cried out that it was a sacred place; but when the pur-

pose was explained to him, he warmly thanked us. Moored to the opposite shore, with their crews in them, they presented an unusual spectacle.

The party which had disturbed us was the advanced guard of the great body of the pilgrims. At 5, just at the dawn of day, the last made its appearance, coming over the crest of a high ridge, in one tumultuous and eager throng.

In all the wild haste of a disorderly rout, Copts and Russians, Poles, Armenians, Greeks and Syrians, from all parts of Asia, from Europe, from Africa, and from far-distant America, on they came; men, women and children, of every age and hue, and in every variety of costume; talking, screaming, shouting, in almost every known language under the sun. Mounted as variously as those who had preceded them, many of the women and children were suspended in baskets or confined in cages; and, with their eyes strained towards the river, heedless of all intervening obstacles, they hurried eagerly forward, and dismounting in haste, and disrobing with precipitation, rushed down the bank and threw themselves into the stream.

They seemed to be absorbed by one impulsive feeling, and perfectly regardless of the observations of others. Each one plunged himself, or was dipped by another, three times, below the surface, in honour of the Trinity; and then filled a bottle, or some other utensil, from the river. The bathing-dress of many of the pilgrims was a white gown with a black cross upon it. Most of them, as soon as they dressed, cut branches either of the agnus castus, or the willow; and, dipping them in the consecrated stream, bore them away as memorials of their visit.

In an hour, they began to disappear; and in less than three hours, the trodden surface of the lately crowded bank reflected no human shadow. The pageant disappeared as rapidly as it had approached, and left to us once more the silence and the solitude of the wilderness. It was like a dream. An immense crowd of human beings, said to be 8000, but I thought not so many, had passed and repassed before our tents, and left not a vestige behind them

Every one bathed, a few Franks excepted; the greater number, in a quiet and reverential manner; but some, I am sorry to say, displayed an ill-timed levity.

Besides a party of English, a lady among them, and three French naval officers, we were gladdened by meeting two of our countrymen, who were gratified in their turn, at seeing the stars and stripes floating above the consecrated river, and the boats which bore them ready to rescue, if necessary, a drowning pilgrim.

We were in the land of Benjamin; opposite was that of Reuben, in the country of the Ammonites, and on the plain of Moab.

A short distance from us was Jericho, the walls of which fell at the sound of trumpets; and fourteen miles on the other side was "Heshbon, where Sihon the King of the Amorites dwelt."

Upon this bank are a few plane trees and many willow and tamarisk, with some of the agnus castus. Within the bank and about the plain are scattered the acacia, the nŭbk (spina Christi), and the mala insana, or mad apple. On the opposite side are acacia, tamarisk, willow, and a thicket of canes lower down.

The pilgrims descended to the river where the bank gradually slopes. Above and below it is precipitous. The banks must have been always high in places, and the water deep; or the axe-head would not have fallen into the water, and Elisha's miracle been unnecessary to recover it.

Shortly after the departure of the pilgrims, a heavy cloud settled above the western hills, and we had sharp lightning and loud thunder, followed by a refreshing shower of rain.

We were all much wearied, and in consequence of living upon salted food since we left Tiberias, were much in need of refreshment. Disappointed in procuring fresh provisions from Jericho, we determined to proceed at once to the Dead Sea, only a few hours distant.

Dr. Anderson volunteered to go to Jerusalem to superintend the transportation of the bread I had sent there; and I gladly accepted his services, instructing him to make a geological reconnoissance of his route.

The great secret of the depression between Lake Tiberias and the Dead Sea, is solved by the tortuous course of the Jordan. In a space of sixty miles of latitude and four or five miles of longitude, the Jordan traverses at least 200 miles. The river is in the latter stage of a freshet—a few weeks earlier or later, and passage would have been impracticable. As it is, we have plunged down twenty-seven threatening rapids, besides a great many of lesser magnitude.

CHAPTER XII.

FROM PILGRIM'S FORD TO 'AIN EL FESHKHAH.

At 1.45 P. M., started with the boats, the caravan making a direct line for Ain el Feshkhah, on the north-west shore of the Dead Sea, the appointed place of rendezvous.

The course of the river was at first S. W. In about half an hour, we were hailed from the right bank, when we stopped and took in Sheikh Helu, of the tribe Huteim, and filled the India-rubber water-bags, having passed a small island thickly wooded. Weather close and sultry. At 2.22, started again, course from N. N. E. to S. by W.; the right bank red clay, twenty-five feet high; left bank low, with high canes and willows. Saw a quantity of drift-wood, and passed a camel in the river, washed down by the current in attempting to cross the ford last night. Weather cloudy at intervals, river forty yards wide, twelve feet deep, bottom blue mud. The banks alternating high and low—highest at the bends and lowest at the opposite points.

In five minutes, passed another camel in the river, the poor beast leaning exhausted against the bank, and his owner seated despondingly above him. We could not help him!

From 2.42 to 2.54, course from S. to S. E. and back; many

pigeons flying about. At this time, there was a nauseous smell on the left or eastern shore—traced it to a small stream running down the Wady Hesbôn; the banks very low, and covered with cane and tamarisk. The river here fifty yards wide, eleven feet deep, muddy bottom, current four knots. Sand and clay banks, with some pebbles on the right; everything indicating the vicinity of the Dead Sea.

At 3, course S. E. by S., water very smooth, discoloured but sweet. Saw a heron, a bulbul, and a snipe. Noted a fœtid smell, proceeding from a small stream on the right or western shore. Low and sedgy banks, high mountains of the Dead Sea in sight to the southward and westward; saw many wild ducks. 3.12, course south a long stretch, river seventy yards wide, left bank very low, covered with tamarisk, willow, and cane; right bank fifteen to eighteen feet high, red clay, with weeds and shrubs —the mala insana, spina Christi, and some of the agnus castus— a few tamarisk at the water's edge.

At 3.13, the mountains to the S. E. over the Dead Sea presented a very rugged, iron-like appearance. Water of the river sweet. 3.15, the left bank low, running out to a flat cape. Right bank low with thick canes, some of them resembling the sugar-cane; twenty feet back the bank twelve feet high, red clay. 3.16, water brackish, but no unpleasant smell; banks red clay and mud, gradually becoming lower and lower; river eighty yards wide, and fast increasing in breadth, seven feet deep, muddy bottom, current three knots. Saw the Dead Sea over the flat, bearing south—mountains beyond. The surface of the water became ruffled. 3.22, fresh wind from north-west—one large and two small islands at the mouth of the river; the islands of mud six to eight feet high, evidently subject to overflow; started a heron and a white gull.

At 3.25, passed by the extreme western point, where the river is 180 yards wide and three feet deep, and entered upon the Dead Sea; the water a nauseous compound of bitters and salts.

The river, where it enters the sea, is inclined towards the eastern shore, very much as is represented on the map of Messrs.

Robinson and Smith, which is the most exact of any we have seen. There is a considerable bay between the river and the mountains of Belka, in Ammon, on the eastern shore of the sea.

A fresh north-west wind was blowing as we rounded the point. We endeavoured to steer a little to the north of west, to make a true west course, and threw the patent log overboard to measure the distance; but the wind rose so rapidly that the boats could not keep head to wind, and we were obliged to haul the log in. The sea continued to rise with the increasing wind, which gradually freshened to a gale, and presented an agitated surface of foaming brine; the spray, evaporating as it fell, left incrustations of salt upon our clothes, our hands and faces; and while it conveyed a prickly sensation wherever it touched the skin, was, above all, exceedingly painful to the eyes. The boats, heavily laden, struggled sluggishly at first; but when the wind freshened in its fierceness, from the density of the water, it seemed as if their bows were encountering the sledge-hammers of the Titans, instead of the opposing waves of an angry sea.

At 4.55, the wind blew so fiercely that the boats could make no headway; not even the Fanny Skinner, which was nearer to the weather shore, and we drifted rapidly to leeward; threw over some of the fresh water, to lighten the Fanny Mason, which laboured very much, and I began to fear that both boats would founder.

At 5.40, finding that we were losing every moment, and that, with the lapse of each succeeding one, the danger increased, kept away for the northern shore, in the hope of being yet able to reach it; our arms, our clothes, and skins coated with a greasy salt; and our eyes, lips, and nostrils, smarting excessively. How different was the scene before the submerging of the plain, which was "even as the garden of the Lord!"

At times it seemed as if the Dread Almighty frowned upon our efforts to navigate a sea, the creation of his wrath. There is a tradition among the Arabs that no one can venture upon this sea and live. Repeatedly the fates of Costigan and Molyneux had been cited to deter us. The first one spent a few days, the last

about twenty hours upon it, and returned to the place from whence he had embarked, without landing upon its shores. One was found dying on the shore; the other expired in November last, immediately after his return, of fever contracted upon its waters.

But, although the sea had assumed a threatening aspect, and the fretted mountains, sharp and incinerated, loomed terrific on either side, and salt and ashes mingled with its sands, and fœtid sulphureous springs trickled down its ravines, we did not despair: awe-struck, but not terrified; fearing the worst, yet hoping for the best, we prepared to spend a dreary night upon the dreariest waste we had ever seen.

At 5.58, the wind instantaneously abated, and with it the sea as rapidly fell; the water, from its ponderous quality, settling as soon as the agitating cause had ceased to act. Within twenty minutes from the time we bore away from a sea which threatened to engulf us, we were pulling at a rapid rate, over a placid sheet of water, that scarcely rippled beneath us; and a rain-cloud, which had enveloped the sterile mountains of the Arabian shore, lifted up, and left their rugged outlines basking in the light of the setting sun. A flock of gulls flew over, while we were passing a small island of mud, a pistol-shot distant from the northern shore, and half a mile west of the river's mouth. Soon after, a light wind sprung up from S. E., and huge clouds drifted over, their western edges gorgeous with light, while the great masses were dark and threatening. The sun went down, leaving beautiful islands of rose-coloured clouds over the coast of Judea; but above the yet more sterile mountains of Moab, all was gloomy and obscure.

The northern shore is an extensive mud-flat, with a sandy plain beyond, and is the very type of desolation; branches and trunks of trees lay scattered in every direction; some charred and blackened as by fire; others white with an incrustation of salt. These were collected at high-water mark, designating the line which the water had reached prior to our arrival. On the deep sands of this shore was laid the scene of the combat between the knight

of the leopard, and Ilderim the Saracen. The north-western shore is an unmixed bed of gravel, coming in a gradual slope from the mountains to the sea. The eastern coast is a rugged line of mountains, bare of all vegetation,—a continuation of the Hauran range, coming from the north, and extending south beyond the scope of vision, throwing out three marked and seemingly equidistant promontories from its south-eastern extremity.

We were, for some time, apprehensive of missing the place of rendezvous; for the Sheikh of Huteim, never having been afloat before, and scarce recovered from his fright during the gale, was bewildered in his mind, and perfectly useless as a guide. The moon had not risen; and in the starlight, obscured by the shadow of the mountains, we pulled along the shore in some anxiety. At one moment we saw the gleam of a fire upon the beach, to the southward; and firing a gun, made for it with all expedition. In a short time it disappeared; and while resting on the oars, waiting for some signal to direct us, there were the flashes and reports of guns and sounds of voices upon the cliffs, followed by other flashes and reports far back upon the shore which we had passed. Divided between apprehensions of an attack upon our friends and a stratagem for ourselves, we were uncertain where to land. Determined, however, to ascertain, we closed in with the shore, and pulled along the beach, sounding as we proceeded.

A little before 8 P. M., we came up with our friends, who had stopped at Ain el Feshkhah, fountain of the stride.

The shouts and signals we had heard were from the scouts and caravan, which had been separated from each other, making mutual signals of recognition; they had likewise responded to ours, which, coming from two points some distance apart, for a time disconcerted us. It was a wild scene upon an unknown and desolate coast: the mysterious sea, the shadowy mountains, the human voices among the cliffs, the vivid flashes and the loud reports reverberating along the shore.

Unable to land near the fountain, we were compelled to haul the boats upon the beach, about a mile below; and, placing some Arabs to guard them, took the men to the camp, pitched in a

cane-brake, beside a brackish spring, where, from necessity, we made a frugal supper; and then, wet and weary, threw ourselves upon a bed of dust, beside a fœtid marsh;—the dark fretted mountains behind—the sea, like a huge cauldron, before us—its surface shrouded in a lead-coloured mist.

Towards midnight, while the moon was rising above the eastern mountains, and the shadows of the clouds were reflected wild and fantastically upon the surface of the sombre sea; and everything, the mountains, the sea, the clouds, seemed spectre-like and unnatural, the sound of the convent-bell of Mar Saba struck gratefully upon the ear; for it was the Christian call to prayer, and told of human wants and human sympathies to the wayfarers on the borders of the Sea of Death.

The shore party stated that, after leaving the green banks of the Jordan, they passed over a sandy tract of damp ravines, where it was difficult for the camels to march without slipping. Ascending a slight elevation, they traversed a plain encrusted with salt, and sparsely covered with sour and saline bushes, some dead and withered, and snapping at the slightest touch given them in passing. They noticed many cavernous excavations in the hill-sides,—the dwelling places of the Israelites, of early Christians, and of hermits during the time of the Crusades.[1] They at length reached a sloping, dark-brown sand, forming the beach of the Dead Sea, and followed it to El Feshkhah. Our Arabs feared wild beasts, but there seemed nothing for one to live on, in these untenanted solitudes. The frogs alone bore vocal testimony of their existence.

In descending the Ghor, Mr. Dale sketched the topography of the country, and took compass bearings as he proceeded. The route of the caravan was on the bank of the upper terrace, on the west side, every day, except one, when it travelled on the eastern side. That elevated plain was at first covered with fields of grain, but became more barren as they journeyed south. The terrace was strongly marked, particularly in the southern portion,

[1] "And because of the Midianites, the children of Israel made them the dens which are in the mountains, and caves, and strongholds."—Judges, xi. 2.

where there was a continuous range of perpendicular cliffs of limestone and conglomerate. This terrace averaged about 500 feet above the flat of the Jordan, the latter mostly covered with trees and grass. They were each day compelled to descend to the lower plain to meet the boats.

Wednesday, April 19. I was first recalled to consciousness this morning by rays of light, the pencilled messengers of the early dawn, shooting above the dark and fretted mountains which form the eastern boundary of the sea. This day I had assigned to rest and preparation for future work, and intended to let all hands sleep late, after the great fatigue of yesterday; but, soon after daybreak, we were startled with the intelligence that the boats were nearly filled with water. The wind had risen towards morning, and a heavy sea was tumbling in. We hastened to the beach to secure the boats, and dry our effects. With all our discomfort, we had slept better than usual, having been undisturbed by fleas. The wind was fresh from the south, and the brawling sound of the breakers was reverberated from the perpendicular face of the mountains. We were encamped just above the spring, in a clearing made in the cane-brake, under a cliff upwards of a thousand feet high—old crumbling limestone and conglomerate of a dull ochre colour.

The fountain is a shallow and clear stream of water, at the temperature of 84°, which flows from a cane-brake, near the base of the mountain. It is soft yet brackish, and there is no deposit of siliceous or cretaceous matter, but it has a strong smell of sulphur. We had no means of analyzing it. A short distance from its source, it spreads over a considerable space, and its diagonal course to the sea is marked by a more vivid line of vegetation than that which surrounds it. Between the cane-brake and the sea is the beach covered with minute fragments of flint. In the water of the sea, near the shore, are standing many dead trees, about two inches in diameter. We could neither find nor hear of the ruins mentioned by Dr. Robinson, and looked in vain for sulphur. The pebbles of bituminous limestone of which he speaks, are in great abundance.

Our Arabs finding it impossible to sustain their horses on the salt and acrid vegetation of this place, and Ain Jidy being represented as no better, I discharged them and the camel-drivers, and applied to the Pasha at Jerusalem for a few soldiers to guard the depôt I intended forming at Ain Jidy, while we should be exploring the sea and its shores.

'Akīl and his followers were to leave us here, but Sherîf, with his servant, would remain. Sent Sherîf to Jerusalem, to assist in superintending the transportation of stores, and to make arrangements for supplies of provisions from Hebron. Sent with him everything we could dispense with—saddles, bridles, holsters, and all but a few articles of clothing.

At 1 P. M., made an excursion along the base of the mountain, towards Râs es Feshkhah (cape of the stride), and gathered some specimens of conglomerate and some fresh-water shells in the bed of the stream. We were struck with the almost total absence of round stones and pebbles upon the beach—the shore is covered with small angular fragments of flint. Started two partridges of a beautiful stone-colour, so much like the rocks, that they could only be distinguished when in motion. Heard the notes of a solitary bird in the cane-brake, which we could not identify. The statement that nothing can live upon the shores of the sea, is, therefore, disproved. The home and the usual haunt of the partridge may be among the cliffs above, but the smaller bird we heard must have its nest in the thicket.

But the scene was one of unmixed desolation. The air, tainted with the sulphuretted hydrogen of the stream, gave a tawny hue even to the foliage of the cane, which is elsewhere of so light a green. Except the cane-brakes, clustering along the marshy stream which disfigured, while it sustained them, there was no vegetation whatever; barren mountains, fragments of rocks, blackened by sulphureous deposit, and an unnatural sea, with low, dead trees upon its margin, all within the scope of vision, bore a sad and sombre aspect. We had never before beheld such desolate hills, such calcined barrenness. The most arid desert has its touch of genial nature :

"But here, above, around, below,
In mountain or in glen,
Nor tree, nor plant, nor shrub, nor flower,
Nor aught of vegetative power,
The wearied eye may ken;
But all its rocks at random thrown,
Black waves, bare crags, and banks of stone."

There was an unpleasant sulphureous smell in the air, which we attributed to the impregnated waters of the fountain and marsh.

'Akīl, to whom we were all much attached, came to see us prior to his departure. To our surprise and great delight, we learned, in the course of conversation, that he was well acquainted and on friendly terms with some of the tribes on the eastern shore. I therefore prevailed upon him to proceed there by land; apprise the tribes of our coming, and make arrangements to supply us with provisions. In ten days he was to be in Kerak, and have a look-out for us stationed upon the eastern shore near the peninsula. It was a most gratifying arrangement, for we might now hope to avoid difficulty where it had been most anticipated, and to visit the country of Moab, so little known to the world.

Sometime after the agreement was made, 'Akīl returned and expressed a wish to be released. I ascertained that some of his timid followers had been dissuading him, and held him to his obligation. He is a high-toned savage. At our former meeting I advanced him money for his expenses and the purchase of provisions, for which he refused to give a receipt or append his seal to the contract. An Arab never subscribes his name, even when he can write. I had, therefore, nothing but his word to rely upon, which I well knew he would never break. "The bar of iron may be broken, but the word of an honest man never," and there is as much honour beneath the yellow skin of this untutored Arab, as ever swelled the breast of the chivalrous Cœur de Lion. He never dreamed of falsehood.

During the early part of the day the weather was pleasant, with passing clouds; but when unobscured the sun was warm. Towards the afternoon the wind subsided, and the calm sea, when the sun shone upon it, verified the resemblance which it has been

said to bear to molten lead. In the forenoon it had looked as yesterday, like a sheet of foam.

The night was clear, a thin mist hung over the southern shore, and the moon was nearly at the full. Near us, when all was still, the sea had the exact hue of absinthe, or that peculiar blue of the grotto of "Azzura," described in the "Improvisatore." Until 2 A. M. the night was serene and lovely. Although the earth was fine and penetrating as ashes, and the miasma from the marsh anything but agreeable, there *were no fleas*, and the bites which had so smarted from the spray yesterday, are now healing up.

To-night our Bedawin had a farewell feast, characteristic alike of their habitual waste and want of cleanliness. A huge kettle, partly filled with water, was laid on a fire made of wood gathered on the beach and strongly impregnated with salt; when the water boiled, a quantity of flour was thrown in and stirred with a branch of drift-wood, seven feet long, and nine inches in circumference. When the mixture was about the consistence of paste, the vessel was taken from the fire and a skin of rancid butter, about six pounds, in a fluid state, was poured in; the mixture was again stirred, and the Bedawin seated round it scooped out the dirty, greasy compound, with the hollow of their hands—'Akīl not the least voracious among them. He is a genuine barbarian, and never sleeps even beneath the frail covering of a tent. In his green āba, which he has constantly worn since he joined us, he is ever to be found at night, slumbering, not sleeping, near the watch-fire—his yataghan by his side—his heavy mounted, wide-mouthed pistols beneath his head. Before retiring, the Arabs took an impressive leave of us; for it was evident that they anticipated encountering some peril in their route along the eastern shore.

The Arab bard sang nearly the whole night. Stopping a little after midnight, he commenced again in less than an hour, and at 2 A. M. was giving forth his nasal notes and his twanging sounds in most provoking monotony; the discordant croaking of the frog is music in comparison. An occasional scream or yell would have been absolute relief.

At midnight, again heard the bell of the convent of Mar Saba. It was a solace to know that, in a place wild and solitary in itself, yet not remote from us, there were fellow Christians raising their voices in supplication to the Great and Good Being, before whom, in different forms, but with undivided faith, we bow ourselves in worship.

Thursday, April 20. Awakened very early by one of the Arabs, more pious or more hypocritical than the rest, constituting himself a Mueddin,[1] and calling the rest to prayer. But the summons was obeyed by very few. An Arab, when he prays, throws his mat anywhere, generally, in obedience to the injunctions of the Koran, in the most conspicuous place. He puts off his shoes; stands upright; leans forward until his hands rest upon his knees; bends yet farther in prostration, and touches the earth with his forehead; he then rises erect, recites a sentence from the Koran, and goes through with similar genuflections and prostrations. In the intervals of the prostrations, he sits back, his knees to the ground, and his feet under him, and recites long passages from the Koran. Sometimes they are abstracted, but not always; we have seen them, in the intervals between the prostrations, comb their beards and address others in conversation, and afterwards, with great gravity, renew their orisons.

The most extraordinary thing is, that some of the Turkish soldiers we have seen, who were seemingly pious and really fanatical, did not understand one word of the Arabic passages of the Koran they recited with so much apparent devotion.

Except those who accompanied us from Acre, we have not seen a single Muslim with beads:—there, as well as at Beïrût, Smyrna and Constantinople, every one we met, from the Pasha down, had them in his hand, apparently as playthings only.

The morning was pleasant; a light breeze from the southward; temperature of the air, 82°. After taking double altitudes, sent Mr. Dale and Mr. Aulick in the boats to sound diagonally and directly across to the eastern shore. They started at 10.30; the

[1] In Turkish, Muezzin.

wind had died away; the sea was as smooth as a mirror towards either shore, but slightly ruffled in the middle, where there seemed to be a current setting to the southward. Thermometer, 89° in the tent, our only shelter, for the sun shone fiercely into every crevice of the mountain behind us. Employed in making arrangements for the removal of the camp farther south to-morrow.

P. M. A short distance from the camp, saw a large brown or stone-coloured hare, and started a partridge; heard another in the cliffs above, and a small bird twittering in the cane-brake beneath me. We discovered that these shores can furnish food for beasts of prey. Found some of the sea-side brache, supposed to be alluded to in Job, and translated mallows in the English version. Also, the Sida Asiatica.

As the day declined, the wind sprang up and blew freshly from the north, and I began to feel apprehensive for the boats. Towards sunset, walked along the base of the mountains to the southward to look for, but could see nothing of them. Started a snipe, and saw, but could not catch, a beautiful butterfly, chequered white and brown. To-day a duck was seen upon the water about a mile from the shore;—his home, doubtless, among the sedges of the brackish stream.

Soon after sunset, some Arabs of the tribe Rashâyideh came into camp, and proffered their services as guides along the western coast, and guards to our effects while absent in the boats. They were the most meagre, forlorn, and ragged creatures I had ever seen. The habiliments of Falstaff's recruits would have been a court costume compared to the attire of these attenuated wretches, whose swarthy skins, in all directions, peered forth through the filthy rags, which hung in shreds and patches, rather betraying than concealing their nudity.

Some of them would have answered as guides; but it would not do to employ them in any other capacity. Their abject poverty would tempt them to steal, and their physical weakness prevent them, even if they were courageous, from defending our property. Since the battle of Cressy, history does not tell of lean and hungry men having ever proved valiant.

As night closed in, we lighted fires along the beach and around the camp as guiding signals to the boats.

At 8 P. M., went down to the beach and looked long and anxiously but could see nothing of them, although a dark object could have been discerned at a great distance, for the surface of the sea was one wide sheet of foam, and the waves, as they broke upon the shore, threw a sepulchral light upon the dead bushes and scattered fragments of rock. Returned to the camp, and placed every one on guard, for all our men but one being absent in the boats, our weakness, if coupled with want of vigilance, might invite an attack from the strange Arabs, who, we knew, were upon the cliffs above.

At a very late hour, the boats returned. They had been retarded by the fresh wind, and corresponding heavy swell of the sea. The distance in a straight line from this to the Arabian shore measured seven nautical, or nearly eight statute miles. The soundings directly across from this place gave 116 fathoms, or 696 feet, as the greatest depth—ninety fathoms, 540 feet, within a fourth of a mile from the Arabian shore. Mr. Aulick reported a volcanic formation on the east shore, and brought specimens of lava. Another line of soundings running diagonally across to the S. E. Mr. Dale reported a level plain at the bottom of the sea, extending nearly to each shore, with an average depth of 170 fathoms, 1020 feet, all across. The bottom, blue mud and sand, and a number of rectangular crystals of salt, some of them perfect cubes. One cast brought up crystals only. Laid them by for careful preservation.

The diagonal line of soundings was run from this place to a black chasm in the opposite mountains. The soundings deepened gradually to twenty-eight fathoms a short distance from the shore; the next cast was 137, and the third 170 fathoms, and the lead brought up, as mentioned, clear cubical crystals of salt. The casts were taken about every half mile, and the deep soundings were carried close to the Arabian shore. It was a tedious operation; the sun shone with midsummer fierceness, and the water, greasy to the touch, made the men's hands smart and burn severely.

In the chasm they found a sweet and thermal stream, coming from above and emptying into the sea. It is, doubtless, the "Zerka Maîn," the outlet of the hot springs of Callirohoe. We trust to give it a thorough examination.

By dark the sea had rolled up dangerously, and the boats took in much water, the crests of the waves curling over their sides. It was a dreadful pull for the men, and when they arrived, their clothes were stiffened with incrustation.

The Rashâyideh were grouped in a circle a short distance from our tents. In their ragged brown ābas, lying motionless, and apparently in profound slumber, they looked by moonlight like so many fragments of rock, and reminded one of the grey geese around the hut of Cannie Elshie, the recluse of Mucklestane Muir. They were not all asleep, however, for when I approached, one instantly arose and greeted me. Retired to rest at 1 A. M., the sea brawling and breaking upon the shore.

CHAPTER XIII.

FROM AIN EL FESKHAH TO AIN JIDY (ENGADDI).

Friday, April 21. Allowed all hands to sleep late this morning, in consequence of the great fatigue of yesterday. The sun rose at 5.29; a light wind from the westward.

Prepared for moving to the southward. The sea was smooth and weather clear, and after sunrise it become quite warm. Lofty arid mountains on both sides; a low flat shore to the northward and to the southward; the south-eastern and the south-western shores converging, with only water visible between them. In that direction, a light veil of mist was drawn above the sea.

At 11, broke up camp, and commenced moving every thing to the boats, excepting a load for the only remaining camel, to be conveyed along the shore. The Rashâyideh were very active in

the labour of transportation from the camp to the boats. Their astonishing brevity of shirt, and lack of all other covering, except a dirty and faded koofeeyeh, rendered them peculiarly interesting to the anatomist. Several of them wore sandals, a rude invention to protect the feet. It is a thick piece of hide, confined by a thong, passing under the sole, at the hollow of the foot, around the heel, and between the great toe, and the one which adjoins it.

Our baggage seemed too heavy for the boats, but it was necessary to make the attempt to get away. Our Jordan water was nearly expended, and that of the fountain was not only unpalatable, but I feared unwholesome also. If it came on to blow, we would have to beach the boats to save them.

At 11.42, started; a light breeze from the southward and westward; the sea slightly ruffled. Steered S. ½ E., along the shore by Ras el Feshkhah. The ras (cape) about 200 yards distant from the shore; between it and our late camping-place is a low, narrow plain, skirted with cane. The precipitous limestone mountain towering a thousand feet above it.

In half an hour, passed Wady Mahras, or Ravine of the Guard. It was dry, with a solitary ghurrah-tree at its mouth, larger than any we had seen upon these shores. It was about the size of a half-grown apple-tree.

Half a mile beyond is the Wady en Nâr (Ravine of Fire), which is the bed of the brook Kidron. The head of that ravine is the valley of Jehoshaphat, under the eastern wall of Jerusalem. Midway down the ravine, the convent of Mar Saba is situated. Between the outlets of the two ravines of Mahras and En Nâr, the debris of the mountains has formed a plain, or delta, sloping to the south-east, and rounding again to the southward.

Soon after, stopped to examine where the Kidron empties into the sea, in the rainy season. The bed, much worn and filled with confused fragments of rock, was perfectly dry. It is a deep gorge, narrow at the base, and yawning wide at the summit, which was 1200 feet above us.

The peak of Mukŭlla, immediately north of this ravine, was the loftiest of the range we had thus far seen on the Judean shore;

and presented, even more than the rest, the appearance of having been scathed by fire. Its summit is less sharp and more rounded, and the rapid disintegration of its face towards the sea has formed a sloping hill of half its height, resembling fine dust and ashes.

The formation of this mountain, like the rest of the range to the north, consists of horizontal strata of limestone; the exterior, of an incinerated brown, is so regular in its stratification as to present a scarped and fortified aspect.

The mountain-sides and summits, and the shores of this sea, thus far, were almost entirely devoid of vegetation; and the solitary tree, of which I have spoken, alone refreshed the eye, while all else within the scope of vision was dreary and utter desolation. The curse of God is surely upon this unhallowed sea!

Picked up fresh-water shells in the torrent-bed, and fragments of flesh-coloured flint upon the sea shore, and gathered some specimens of rock.

Starting again, we had scarce any wind; weather warm but not oppressive; the sky somewhat clouded with cumuli; the course, S. $\frac{1}{2}$ W. The curve of the shore forms a bay between the delta we have just left, and a point bearing S. S. E.

At 3 P. M., abreast of the high cliff Hathûrah, and the Wady Sŭdeir, immediately north of it. A little beyond was a large cave, two-thirds up the cliff. The delta, which had narrowed since leaving the bed of the Kidron, began to spread out again from the mountains towards the sea.

We next came to Wady Ghuweir, which presented a singular appearance on its summits; the northern one resembling a watch-tower, and the southern one a castle.

3.30, low land visible to the southward; a fire on the eastern shore. The face and sides of this ravine are cut into terraces by the action of the winter rains.

Narrow strips of canes and tamarisks immediately at the foot of the cliff,—a luxuriant line of green; except the solitary ghurrah-tree, the only thing we have seen to cheer the eye since leaving the tawny cane-brake of Ain el Feshkhah. A beach of coarse,

dark gravel below, and barren, brown mountains above, throughout the whole intervening space.

Half a mile from the shore, threw over the drag in ten fathoms water. It brought up nothing but mud.

4.30, a perfect calm. The clouds hung motionless in the still air, and their shadows chequered the rugged surface of the mountains of Arabia. It was the grandeur of desolation; no being seen—all sound unheard—we were in the midst of a profound and awful solitude.

4.41, approaching Ain Turâbeh. On a point, stretching out into the sea, are a few ghurrah-trees and some tamarisk-bushes, and tufts of cane and grass, which alone relieved the dreary scene; all besides are brown, incinerated hills; masses of conglomerate; banks of sand and dust, impalpable as ashes, and innumerable boulders, bleached by long exposure to the sun.

Rounded the point, which was low and gravelly, with some drift-wood upon it; rowed by a small but luxuriant cane-brake, and camped a short distance from the fountain.

The clear, shelving beach, the numerous tamarisk and ghurrah-trees, and the deep green of the luxuriant cane, rendered this, by contrast, a delightful spot.

The indentation of the coast formed here a perfect little bay; and the water of the fountain, although warm, is pure and sweet. Its temperature, 75°. It rather trickles than gushes from the north side of the bay, within ten paces of the sea.

We here found a pistachia[1] in full bloom, but its pretty white and pink flowers yielded no fragrance. In the stream of the little fountain were several lily-stalks, and the sand was discoloured with a sulphureous deposit, as at Ain el Feshkhah. The Arabs formed a number of pools around by scooping out the sand and gravel with their hands.

An Arab brought us some dhom apples, the fruit of the nûbk,

[1] Pistachia Terebinthus; the terebinth of Scripture. It is here a dwarf, but is said to grow larger on the plains. It was under the shade of a terebinth-tree that Abraham pitched his tent at Mamre. The Arabs call it "bûtm."

or spina Christi. They were much withered, and presented the appearance of a small, dried crab-apple. It had a stone like the cherry; but the stone was larger, and there was less fruit on it in proportion to its size. It was sub-acid, and to us quite palatable; and, reclined upon the shelving beach of pebbles, we took off the edge of appetite while our cook was preparing the second and last meal of the day.

The plants we found here, besides the lily, were the yellow henbane, with narcotic properties; the nightshade (anit et dil), or wolf-grape, supposed, by Hasselquist, to be the wild grape alluded to in Isaiah; the lamb's quarter, used in the manufacture of barilla; and a species of kale (salicornea Europea). This plant is found wherever salt water or saline formations occur. It was here upon the shore of the Dead Sea, and Frémont saw it on the borders of the Great Salt Lake, west of the Mississippi. Besides the single pistachia tree, there were a great many tamarisks, now also in blossom; the flowers small and of a dull white colour: the wood of the tree makes excellent charcoal, and, in the season, the branches bear galls almost as acrid as the oak.

The pebbles on the beach, to-day, were agglutinated with salt, and the stones in the torrent-beds were coated with saline incrustations.

One of the party shot at a duck, a short distance from the shore; —dark-grey body, and black head and wings. The bird, when fired at, flew but a short distance out to sea, where it alighted and again directed its course towards the shore. We therefore inferred that its haunt was among the sedges of the little fountain.

It was a strange scene, to-night. The tents among the tamarisks, the Arab watch-fires, the dark mountains in the rear, the planets and the stars above them, and the boats drawn up on the shore. The night was serene and beautiful; the moon, now beginning to wane, shone on a placid sea, upon which there was not the slightest ripple. The profound stillness was undisturbed by the faintest sound, except the tread of our sentinels.

Early in the morning it was quite cool. At 6 A. M., temperature of the air 70° and very pleasant. Took our breakfast beneath

some tamarisk trees in bloom, the grateful shade enhanced by their delicious fragrance. An Arab brought some specimens of sulphur picked up on the banks of the Jordan near the sea, most probably washed down from the mountains by the river torrents. Some flowers were gathered and placed in our herbarium for preservation. Our arms, instruments, and everything metallic, were bronzed by the saline atmosphere.

Started early for Ain Jidy (fountain of the kid); wind light from S. E., with a short troubled swell—the heavily laden boats rolled unmercifully. A few clouds in the north-east; cumulus stratus; steered S. by E. to clear the point to the southward.

At 8.20, abreast of Wady Ta'âmirah, at the head of which is Bethlehem. Thus on one side is the sea, the record of God's wrath; on the other, the birth-place of the Redeemer of the world.

8.30, a thin, haze-like, heated vapour over the southern sea—appearance of an island between the two shores. 9.50, passed through a line of foam, curved to the north, and coloured brown by floating patches of what seemed to be the dust of rotten wood.

At 10.25, hailed by an Arab from the shore, but could not understand him. At 11, under a high peak of a mountain, the escarpment furrowed with innumerable dry water-courses. The marks upon the shore indicated that the sea had fallen seven feet this season.

Soon after noon, reached Wady Sudeir, below Ain Jidy (Engaddi). Walked up the dry torrent bed, and finding no suitable place for encampment, directed the boats to be taken half a mile farther south, where they were hauled up, and our tents pitched near them, immediately in a line with, but some distance from where the fountain stream of Ain Jidy descends the mountain side and is lost in the plain; its course marked by a narrow strip of luxuriant green. The Wady Sudier had water in it some distance up, but too remote for our purposes.

Instead of the fine grassy plain, which, from Dr. Robinson's description, we had anticipated, we found here a broad sloping delta at the mouth of dry gorges in the mountains. The surface of this plain is dust covered with coarse pebbles and minute

fragments of stone, mostly flint, with here and there a nŭbk and some osher trees. The last were in blossom, but had some of the fruit of last year, dry and fragile, hanging upon them, and we collected some for preservation. The blossom is a delicate purple, small, bell-shaped, and growing in large clusters. The leaf is oblong, about four inches long by three wide, thick, smooth, and of a dark green, and except that it is smaller, much resembling the caoutchouc. The branches are tortuous like the locust, and the light brown bark has longitudinal ash-coloured ridges upon it, like the sassafras at home. The nŭbk or lotus tree, the spina Christi of Hasselquist, called by the Arabs the dhom tree, has small dark-green, oval-shaped, ivy-like leaves. Clustering thick and irregularly upon the crooked branches, are sharp thorns, half an inch in length. The smaller branches are very pliant, which, in connexion with the ivy-like appearance of the leaves, sustains the legend that of them was made the mock crown of the Redeemer. Its fruit, resembling a withered crab-apple, is subacid, and of a pleasant flavour.

There were tamarisk trees and much cane in the bed of the ravine, besides many pink oleanders. About the plain we found the rock rose, from one of the species of which the gum ladanum is procured; also the common pink; the Aleppo senna, which is used in medicine; the common mallow, and the scentless yellow mignonette.

On the upper part of the plain were terraces, which bore marks of former cultivation, perhaps cucumber-beds, such as seen by Dr. Robinson and Mr. Smith. They were owned by the Ta'âmirah, and had been destroyed a short time before by a tribe of hostile Arabs. We found a few small prickly cucumbers, or gerkins, in detached places. There were two patches of barley standing, which were scarce above the ground, perhaps, at the time of the hostile incursion. Yet, although it could have been but a few weeks since, the grain was nearly ready for the harvest. The whole aspect of the country, these few trees and patches of vegetation excepted, was one incinerated brown. The mountain, with caverns in its face, towered fifteen hundred feet above us; and one-third

up was the fountain, in a grove of spina Christi. It was a spot familiar to the imaginations of all,—the "Diamond of the Desert," in the tales of the crusaders.

Examined the boats for repairs. Found them very much battered, and their keels, stems, and stern-posts, fractured. Commenced a series of barometrical and thermometrical observations, and surveyed the ground for a base-line. Observed some branches of trees floating about a mile from the shore, towards the north, confirming our impression of an eddy-current. At 6 P. M., an Arab brought in a catbird he had killed; like all the other birds, and most of the insects and animals, we had seen, it was of a stone colour.

In the evening, some of the tribe Ta'âmirah came in,—a little more robust, but scarcely better clad, than the Rashâyideh. They were warm and hungry, from walking a long distance to meet us. They had no food, and I directed some cooked rice to be given to them. They had seated themselves round the pot, and were greedily about to devour its contents, when one of them suggested that, perhaps, pork had been cooked in the same vessel. They rose, therefore, in a body and came to the cook to satisfy their scruple. I never saw disappointment more strongly pictured in the human countenance than when told the vessel had often been used for that purpose. Although nearly famished, they would not touch the rice, and we could give them nothing else. Fearing that our provisions would fall short, I advised them to return; not to their houses, for they have nothing so stable as to deserve the name, but to their migratory tents.

As in all southern nations of this continent, the principal food of the Arab is rice. Almost all other nations extract an intoxicating beverage from the plant, containing saccharine matter, which constitutes their principal article of nourishment. But the Arab scarcely knows what strong drink is, and has no name for wine, the original Arabic word for which is now applied to coffee.

Our Arabs were such pilferers that we were obliged to keep a most vigilant watch over everything, except the pork, which, being an abomination to the Muslim, was left about the camp, in full confidence that it would be left untouched.

At 8.30, there was a light breeze from the south-west—no clouds visible—a pale-blue misty appearance over the sea. At 9, the wind shifted to the north, and blew strong; forced to strengthen the tent-stakes and pile stones upon the canvass eaves. The moon rose clear. Sea, rough. Weather, cool and pleasant. A strong smell of sulphuretted hydrogen, which surprised us, as we knew of no thermal spring in this vicinity. At midnight, sky almost cloudless; thin strata of cirri, extending north-east and south-west. Wind ranging from north to north-east and abating. Sherîf said that he had often heard of the tyranny of the Franks towards each other, but never thought they would have sent their countrymen to so desolate a place as this. Most of the Arabs, however, suspected that we came for gold; and Dr. Anderson's hammering at the rocks was, to them, conclusive proof.

We measured a base line of 3350 feet across the plain, and angled upon all possible points. An Arab, with two camels loaded with salt, came from the south end of the sea, and was going up this pass to Gaza. Commerce extends even here, although her burnished keels have never ploughed this dreary sea.

Our water was brought the distance of a mile by the Arabs. There were about fifty of them around the camp, and we could not persuade them to go away. They were of the Raschâyideh and Ta'âmirah tribes—mere bundles of rags, very poor, and, so far, perfectly inoffensive. Some of them kissed our hands, and, pointing to their miserable garments, by comprehensible gestures solicited charity.

Our bread and rice falling short, and being uncertain about the arrival of provisions from Jerusalem, I sent some Arabs to Hebron for flour. Would that we could have gone there, too, and visited the cave of Macpelah, near Mamre!

One of my greatest anxieties was the difficulty of procuring provisions. Should our train, coming from Jerusalem under charge of Dr. Anderson and the Sherîf, be plundered on its way, and the emissary to Hebron procure but a small supply, we should be in a starving condition. I would have also sent either

Mr. Dale or Mr. Aulick to Jerusalem, but that their presence was absolutely necessary. To sound the sea, take topographical sketches of its shores, and make astronomical and barometrical observations, gave full occupation to every one. This was to be our depôt; here we were to leave our tents, and every thing we could dispense with, and it would be our home while upon this sea.

April 23, Easter Sunday. Deferred all work that we could possibly set aside, until to-morrow. At 7.30, thermometer 85°, and rising rapidly; the two extremities of the sea misty, with constant evaporation; sky cloudless, a light breeze from the north, the heat so oppressive in the tent, that we breakfasted "al fresco." A. M. Walking along the beach, saw a hawk, and shortly after some doves, near the tent, all of the same colour as the mountains and the shore. Each day, in the forenoon, the wind had prevailed from the southward, and in the afternoon, until about midnight, from the northward; the last wind quite fresh, and accompanied with a smell of sulphur. After midnight, it generally fell calm. Although the nights were mostly cloudless, there was scarcely any deposit of dew, the ground remaining heated through the night from the intensity of the solar rays during the day.

Four young wild boars were brought in by an Arab; they escaped from him and ran to the sea, but were caught, and as we would not buy them, in consequence of their being too young, they were killed.

Nearly out of provisions, and, anxiously looking for Dr. Anderson and the Sherîf; we gladly hailed their appearance shortly after noon, creeping like mites along the lofty crags descending to this deep chasm.

Although we saw the Doctor and Sherîf shortly after noon, they did not reach the camp until three hours after. The provisions they brought were very acceptable. With them, came four Turkish soldiers, to guard our camp while we should be absent.

P. M. We again noticed a current, setting to the northward along the shore, and one further out, setting to the southward. The last was no doubt the impetus given by the Jordan, and the

former its eddy, deflected by Usdum and the southern shore of the sea.

Arranged with Sherîf that he should remain here, in charge of our camp.

The scene at sunset was magnificent;—the wild, mighty cliffs above us, the dull, dead sea, and the shadows climbing up the eastern mountains. And there was Kerak, castled upon the loftiest summit of the range! We never looked upon it but we deplored the folly and rapacity of the "Lord of Kerak," which lost to Christendom the guardianship of the Holy Sepulchre.

We all felt a great oppression about the head, and much drowsiness, particularly during the heat of the day. In the evening, it was calm and sultry.

At night we visited Sherîf. A number of Arabs were gathered in front of the tent, and they gave us a dance. Ten or twelve of them were drawn up in a line, curved a little inwards, and one of them stood in front, with a naked sword. A mass of filthy rags, with black heads above and spindle legs below! Clapping their hands, and chanting a low monotonous song, bowing and bending, and swinging their bodies from side to side, they followed the motions of the one in front. In a short time, one of them commenced chanting extempore, and the others repeated the words with monotonous cadence; he with the sword waving it to and fro in every direction, and keeping time and movement with the rest. Their song referred to us. "Mr. Dale was strong and rode a horse well." "Kobtan, (the captain) made much work for Arabs, with his head." The dance was interrupted by an old man suddenly darting into the circle, and, bare-footed, with his āba gathered in his hands behind him, went jumping, hopping, crouching, and keeping time to the strange sounds of the others. The grotesque movements, the low monotonous tones, and the seeming ill-timed levity of the old Arab, gave to the whole affair the appearance of a wild coronach, disturbed by the antics of a mountebank. In the swaying of the body and clapping of the hands, some of us detected a resemblance to the war-dance of the South Sea Islanders.

A calm, sultry night. In the mid-watch there was a bright meteor from the zenith, towards the north-east. The same sulphureous smell, but less unpleasant than when the wind blew fresh. Molyneux detected the same odour the night he spent upon the sea, whence he thought it proceeded. We have been twice upon the sea when the spray was driven in our faces; but although the water was greasy, acrid, and disagreeable, it was perfectly inodorous. I am therefore inclined to attribute the noxious smell to the fœtid springs and marshes along the shores of the sea, increased, perhaps, by exhalations from stagnant pools in the flat plain which bounds it to the north.

Monday, April 24. Called all hands at 4.45 A. M.; light wind from the north; clouds, cirro-stratus, in the south and east; temperature, 78°. Wrote a note to Mr. Finn, H. B. M. Consul at Jerusalem, respecting provisions. This gentleman had been exceedingly kind and attentive. He had received our money on deposite, and paid my drafts upon it. By this means we kept but little money on hand, and avoided presenting a great temptation to the Arabs.

At 6, breakfasted luxuriously on fresh bread, brought, by the Doctor, from Jerusalem. The latter reported Hugh Reid (seaman), one of the crew of the Fanny Skinner, as unable to work at the oar. Determined to leave him in the camp, his affection being a chronic one, uninfluenced by the climate.

At 6.30, started with Dr. Anderson, in the Fanny Mason, for the peninsula, which had so long loomed, like Cape Flyaway, in the distance. Directed Mr. Aulick to pull directly across to Wady Mojeb (the River Arnon of the Old Testament), and sound as he proceeded.

I left Mr. Dale and the rest of the party to make observations for determining the position of the camp, and measure angles for each end of the base-line. We steered, in the Fanny Mason, a south-east course, directly for the north end of the peninsula, sounding at short intervals. The first cast, near the shore, brought up slimy mud, but further out, a light-coloured mud, and many perfectly well formed cubic crystals of salt. These, as well as the

mud, were carefully put up in air-tight vessels; greatest depth, 137 fathoms, 822 feet. One of the deepest casts, the cup to Stelwagon's lead brought up a blade of grass, faded in colour, but of as firm a texture as any plucked on the margin of a brook. It must have been washed down by one of the fresh-water streams, in connection with a heavier substance.

About midway across picked up a dead bird, which was floating upon the water; we recognised it as a small quail. At 11, reached the peninsula; the sun intensely hot. It is a bold, broad promonotory, from forty to sixty feet high, with a sharp angular central ridge some twenty feet above it, and a broad margin of sand at its foot, incrusted with salt and bitumen; the perpendicular face extending all round and presenting the coarse and chalky appearance of recent carbonate of lime. There were myriads of dead locusts strewed upon the beach, near the margin of the sea. The summit of the peninsula is irregular and rugged; in some places showing the tent-shape formation, in others, a series of disjointed crags. On the western side, the high peninsula, with its broad margin, extends to the southward until it is lost in the misty sea.

There were a few bushes, their stems partly buried in the water, and their leafless branches incrusted with salt, which sparkled as trees do at home when the sun shines upon them after a heavy sleet. Such an image, presented to the mind, while the frame was weltering with the heat, was indeed like "holding a fire in the hand and thinking of the frosty Caucasus." Near the immediate base of the cliffs was a line of drift-wood deposited by the sea at its full. Except the standing and prostrate dead trees, there was not a vestige of vegetation. The mind cannot conceive a more dreary scene, or an atmosphere more stifling and oppressive. The reverberation of heat and light from the chalk-like hills and the salt beach was almost insupportable.

Walking up the beach we saw the tracks of a hyena, and another animal which we did not recognise, and soon after the naked footprints of a man. To the eastward of the point is a deep bay indenting the peninsula from the north. We followed

up an arched passage worn in the bank, and cutting steps in the salt on each side, crawled through a large hole worn by the rains, and clambered up the steep side of the ridge to gain a view from the top. It presented a surface of sharp and angular points, light coloured, bare of vegetation, and blinding to the eye. We here collected many crystals of carbonate of lime. During our absence, the sailors had endeavoured to make a fire of the drift-wood as a signal to the camp, but it was so impregnated with salt that it would not burn.

At 1 P. M., started on our return, steering directly across to measure the width of the strait between the peninsula and the western shore. There was little wind, the same faint sulphureous smell, and every one struggling against a sensation of drowsiness. Arrived at the camp a little before 6 P. M., in a dead calm, very much wearied, temperature 92°. As we landed, an Arab ran up, and gathering an armful of barley in the straw, threw it on the fire, and then husking the grain by rubbing it in his hands, brought it to me, and by gesture invited me to eat; it was excellent. The Fanny Skinner arrived shortly after. Mr. Aulick had sounded directly across, and found the width of the sea by patent log to be a little more than eight geographical, or about nine statute miles; the greatest depth 188 fathoms, 1128 feet. He landed at the mouth of the "Arnon;"—a considerable stream of water, clear, fresh, and moderately cool, flowing between banks of red sandstone. In it some small fish were seen.

On our first arrival here, I had despatched a messenger to the tribes along the southern coast to procure guides. This afternoon he returned with the information that they had been driven away, and that the country was inhabited only by robbers. Sherîf was earnest in the advice to proceed no farther south; but we could not leave our work unaccomplished. A Sheikh of the Ta'âmirah agreed to walk along the coast in sight of the boats. We wished to visit the ruins of Sebbeh on our route southward, and prepared for several days' absence. At night a fresh breeze sprang up from the northward and eastward. There were several large fires on the peninsula. Secured a partridge and several insects for

our collection; and there was also gathered a specimen of every variety of flower for our herbarium. In the evening our Arabs had another entertainment. An improvisatore in Arabic poetry was engaged until a late hour reciting warlike narratives in verse for the amusement of Sherîf—some from Antar the celebrated poet of Arabia; others, unpremeditated, in praise of Ibrahim Pasha. At the end of each couplet, the audience pronounced the final rhyming word after him. This was more endurable than the one-stringed rehabeh, and less stupid than the dance of last evening. In the night, killed a tarantula and a scorpion.

Oppressively sultry. A fœtid, sulphureous odour in the night; felt quite sick. At daybreak, a fine invigorating breeze from the north; air over the sea very misty. Did not rouse the camp until 6.30, for the night had been oppressive. The Arabs becoming too numerous in the camp, I sent all away, except a few to bring water to Sherîf, and some to accompany us to show where water could be found along the shore.

CHAPTER XIV.

EXPEDITION AROUND THE SOUTHERN SEA.

Tuesday, April 25. Completed a set of observations, bundled up the mess things, and started on a reconnoissance of the southern part of the sea; leaving Sherîf in charge of the camp, with Read and the four Turkish soldiers. Steered about south, from point to point, keeping near the Arabs along the shore, *for their protection;* for they dreaded an attack from marauding parties. Threw the patent log overboard; the weather fair but exceedingly hot; thermometer, 89°; little air stirring; no clouds visible; the mountains, as we passed, seemed terraced, but the culture was that of desolation.

At 11, the patent log had marked $2\frac{7}{8}$ knots; depth, six feet; bottom, soft brown mud; made for a current ripple, a little farther out, coloured with decomposed wood, membranes of leaves, chaff, &c.; depth, thirteen fathoms; hard bottom; resumed the course along the shore. Occasionally sounded out to $2\frac{1}{2}$ fathoms, one mile from shore, to look for ford. Passed Wady Sêyâl Sebbeh (ravine of Acacias), supposed to have water in it, very high up, the log having marked $8\frac{1}{2}$ nautical miles. The cliff above the ravine was that of Sebbeh, or Masada. It is a perpendicular cliff, 1200 to 1500 feet high, with a deep ravine breaking down on each side, so as to leave it isolated. On the level summit is a line of broken walls, pierced in one place with an arch. This fortalice, constructed by Herod, and successfully beleagured by Silva, had a commanding but dreary prospect, overlooking the deep chasm of this mysterious sea. Our Arabs could give no other account of it than that there were ruins of large buildings on the cliff.

The cliff of Sebbeh is removed some distance from the margin of the sea by an intervening delta of sand and detritus, of more than two miles in width. A mass of scorched and calcined rock, regularly laminated at its summit, and isolated from the rugged strip, which skirts the western shore, by deep and darkly shadowed defiles and lateral ravines, its aspect from the sea is one of stern and solemn grandeur, and seems in harmony with the fearful records of the past.

There is that peculiar purple hue of its weather-worn rock, a tint so like that of coagulated blood that it forces the mind back upon its early history, and summons images of the fearful immolation of Eleazar and the nine hundred and sixty Sicarii, the blood of whose self-slaughter seems to have tinged the indestructible cliff for ever.

At 3.05 P. M. a fine northerly wind blowing; stopped to take in our Arabs. They brought a piece of bitumen, found on the shore, near Sebbeh, where we had intended to camp; but the wind was fair, and there was an uncertainty about water. We ascertained that there is no ford here as laid down in the map of

Messrs. Robinson and Smith. One of the Arabs said that there was once a ford here, but all the others denied it. Passed two ravines and the bluff of Rŭbtât el Jâmûs (Tying of the Buffalo), and at 5 P. M., stopped for the night in a little cove, immediately north of Wady Mubŭghghik, five or six miles north of the salt-mountain of Usdum, which loomed up, isolated to the south. From Ain Jidy to this place, the patent log measured $13\frac{1}{8}$ nautical miles, which is less than the actual distance, the log sometimes not working, from the shoalness of the water.

We paid particular attention to the geological construction of the western shore, with a special regard to the disposition of the ancient terraces and abutments of the tertiary limestone and marls. There may be rich ores in these barren rocks. Nature is ever provident in her liberality, and when she denies fertility of surface, often repays man with her embowelled treasures. There is scarce a variety of rock that has not been found to contain metals; and it is said that the richness of the veins is for the most part independent of the nature of the beds they intersect.

There has been no great variety in the scenery, to-day; the same bold and savage cliffs; the same broad peninsulas, or deltas, at the mouths of the ravines,—some of them sprinkled here and there with vegetation,—all evincing the recent or immediate presence of water. This part of the coast is claimed by no particular tribe, but is common to roaming bands of marauders.

The beach was bordered with innumerable dead locusts. There was also bitumen in occasional lumps, and incrustations of lime and salt. The bitumen presented a bright, smooth surface when fractured, and looked like a consolidated fluid. The Arabs called it hajar Mousa (Moses' stone).

Our Arabs insisted upon it that the only ford was at the southern extremity of the sea. There were seven of them with us, and they were of three tribes, the Rashâyideh, Ta'âmirah and Kâbeneh. Being beyond the limits of their own territories, they were very apprehensive of an attack from hostile tribes. When, this afternoon, under the impression, which proved to be correct, that there was water in the ravine, we called to them, they came down

in all haste, unslinging their guns as they ran, in the supposition that we were attacked,—evincing, thereby, more spirit than we had anticipated. They were very uneasy; and, immediately after our arrival, one of them was perched, like a goat, upon a high cliff; and the others had bivouacked where they commanded a full view into the mouth of the ravine.

Our camp was in a little cove, on the north side of the delta, which had been formed by the deposition of the winter torrents, and extends half a mile out, with a rounding point to the eastward. The ravine comes down between two high, round-topped mountains, of a dark, burnt-brown colour, and a horizontal, terrace-like stratum, half-way up. In the plain were several nŭbk and tamarisk trees, and three kinds of shrubs, and some flowers, which we gathered for preservation. Near the ravine, on a slight eminence, we discovered the ruins of a building, with square-cut stones,—the foundation-walls alone remaining, and a line of low wall running down to the ravine; near it was a rude canal. There were many remains of terraces. Here Costigan thought that he had found the ruins of Gomorrah. About half a mile up, the faces of the ravine cut down perpendicularly through limestone rock, and turned, at right angles, a short distance above, with here and there a few bushes in the bottom. We found a little brook purling down the ravine, and soon losing itself in the dry plain. We were now almost at the southern extremity of the sea. The boats having been drawn up on the beach, their awnings were made to supply the places of tents, the open side facing the ravine; the blunderbuss at our head, and the sentries walking beside it. At 8 P. M., there were a few light cumuli in the sky, but no wind. At 8.30, a hot fresh wind from north-west; thermometer, 82°; at 9, 86°. Finding it too oppressive under the awning, we crawled out upon the open beach, and, with our feet nearly at the water's edge, slept "à la belle etoile." After the manner of the poor highwayman, we slept in our clothes, under arms, and upon the ground. It continued very hot during the night, and we could not endure even a kerchief over our faces, to screen them from the hot and blistering wind.

This was doubtless a sirocco, but it came from an unusual quarter. At midnight, the thermometer stood at 88°. There were several light meteors from the zenith towards the north, seen during the night. While the wind lasted, the atmosphere was hazy. Notwithstanding the oppressive heat, there was a pleasure in our strange sensations, lying in the open air, upon the pebbly beach of this desolate and unknown sea, perhaps near the sites of Sodom and Gomorrah; the salt mountains of Usdum in close proximity, and nothing but bright, familiar stars above us.

Wednesday, April 26. When I awoke this morning there was a young quail at my side, where, in the night, it had most probably crept for shelter from the strong, hot wind.

We were up before sunrise; light variable airs and warm weather. Started and steered in a direct line for Râs Hish (cape Thicket), the north point of Usdum. Sounding every few minutes for the ford; stretching out occasionally from the shore line, and returning to it again, when the water deepened to two fathoms.

At 8.12, stood in and landed on the extreme point of Usdum. Many dead bushes along the shore, which are incrusted with salt as at the peninsula. Found it a broad, flat, marshy delta, the soil coated with salt and bitumen, and yielding to the foot.

At 8.30, started again and steered E. S. E., sounding every five minutes, the depth from one to one, and three-quarter fathoms; white and black slime and mud. Seetzen saw this salt mountain in 1806, and says that he never before beheld one so torn and riven; but neither Costigan nor Molyneux, who were in boats, came farther south on the sea than the peninsula. With regard to this part, therefore, which most probably covers the guilty cities,—

"We are the first
That ever burst
Into this silent sea."

At 9, the water shoaling, hauled more off shore. Soon after, to our astonishment, we saw on the eastern side of Usdum, one third the distance from its north extreme, a lofty, round pillar, standing apparently detached from the general mass, at the head of a deep, narrow, and abrupt chasm. We immediately pulled in

for the shore, and Dr. Anderson and I went up and examined it. The beach was a soft, slimy mud encrusted with salt, and a short distance from the water, covered with saline fragments and flakes of bitumen. We found the pillar to be of solid salt, capped with carbonate of lime, cylindrical in front and pyramidal behind. The upper or rounded part is about forty feet high, resting on a kind of oval pedestal, from forty to sixty feet above the level of the sea. It slightly decreases in size upwards, crumbles at the top, and is one entire mass of crystallization. A prop, or buttress connects it with the mountain behind, and the whole is covered with debris of a light stone colour. Its peculiar shape is doubtless attributable to the action of the winter rains. The Arabs had told us in vague terms that there was to be found a pillar somewhere upon the shores of the sea; but their statements in all other respects had proved so unsatisfactory, that we placed no reliance upon them.[1]

At 10.10, returned to the boat with large specimens. The shore was soft and very yielding for a great distance; the boats could not get within 200 yards of the beach, and our foot-prints made on landing, were, when we returned, incrusted with salt.

Some of the Arabs, when they came up, brought a species of melon they had gathered near the north spit of Usdum. It was

[1] A similar pillar is mentioned by Josephus, who expresses the belief of its being the identical one into which Lot's wife was transformed. His words are, "But Lot's wife continually turning back to view the city as she went from it, and being too nicely inquisitive what would become of it, although God had forbidden her so to do, was changed into a pillar of salt, for I have seen it, and it remains at this day." — 1 *Josephus' Anti., book* 1, *chap.* 12.

St. Clement, of Rome, a contemporary of Josephus, also mentions this pillar, and likewise St. Irenæus, a writer of the second century, who adds the hypothesis, how it came to last so long with all its members entire. Reland relates an old tradition that as fast as any part of this pillar was washed away, it was supernaturally renewed.

"Whose land for a testimony of their wickedness, is desolate, and smoketh to this day; and the trees bear fruits that ripen not; and a standing pillar of salt is a monument of an incredulous soul." — Book of Wisdom, x. 7.

oblong, ribbed, of a dark green colour, much resembling a cantelope. When cut, the meat and seeds resembled the same fruit, but were excessively bitter to the taste. A mouthful of quinine could not have been more distasteful, or adhered longer and more tenaciously to the reluctant palate.

Intending to examine the south end of the sea, and then proceed over to the eastern shore in the hope of finding water, we discharged all our Arabs but one, and sharing our small store of water with them, and giving them provisions, we started again, and steered south.

11.28, unable to proceed any further south from shallowness of the water, having run into six inches, and the boats' keels stirring up the mud. The Fanny Skinner having less draught, was able to get a little nearer to the shore, but grounded 300 yards off. Mr. Dale landed to observe for the latitude. His feet sank first through a layer of slimy mud a foot deep, then through a crust of salt, and then another foot of mud, before reaching a firm bottom. The beach was so hot as to blister the feet. From the water's edge, he made his way with difficulty for more than a hundred yards over black mud, coated with salt and bitumen.

Unfortunately, from the great depth of this chasm, and the approach of the sun towards the tropic of Cancer, the sextant (one of Gambey's best) would not measure the altitude with an artificial horizon, and there was not sufficient natural horizon for the measurement. We therefore took magnetic bearings in every direction, which, with observations of Polaris, would be equally correct, but more laborious. We particularly noted the geographical position of the south end of Usdum, which was now a little south of the southern end of the sea. The latter is ever-varying, extending south from the increased flow of the Jordan and the efflux of the torrents in winter, and receding with the rapid evaporation, consequent upon the heat of summer.

In returning to the boat, one of the men attempted to carry Mr. Dale to the water, but sunk down, and they were obliged separately to flounder through. When they could, they ran for it. They describe it as like running over burning ashes, — the

perspiration starting from every pore with the heat. It was a delightful sensation when their feet touched the water, even the salt, slimy water of the sea, at the temperature of 88°.

The southern shore presented a mud-flat, which is terminated by the high hills bounding the Ghor to the southward. A very extensive plain or delta, low and marshy towards the sea, but rising gently, and, farther back, covered with luxuriant green, is the outlet of Wady es Sâfieh (clear ravine). Anxious to examine it, we coasted along, just keeping the boat afloat, the in-shore oars stirring up the mud. The shore was full three-fourths of a mile distant, the line of demarcation scarce perceptible, from the stillness of the water, and the smooth, shining surface of the marsh. On the flat beyond, were lines of drift-wood, and here and there, in the shallow water, branches of dead trees, which, like those at the peninsula, were coated with saline incrustation. The bottom was so very soft that it yielded to everything, and at each cast the sounding lead sank deep into the mud. Thermometer, 95°. Threw the drag over, but it brought up nothing but soft, marshy, light coloured mud.

It was indeed a scene of unmitigated desolation. On one side, rugged and worn, was the salt mountain of Usdum, with its conspicuous pillar, which reminded us at least of the catastrophe of the plain; on the other were the lofty and barren cliffs of Moab, in one of the caves of which the fugitive Lot found shelter. To the south was an extensive flat intersected by sluggish drains, with the high hills of Edom semi-girding the salt plain where the Israelites repeatedly overthrew their enemies; and to the north was the calm and motionless sea, curtained with a purple mist, while many fathoms deep in the slimy mud beneath it lay embedded the ruins of the ill-fated cities of Sodom and Gomorrah. The glare of light was blinding to the eye, and the atmosphere difficult of respiration. No bird fanned with its wing the attenuated air through which the sun poured his scorching rays upon the mysterious element on which we floated, and which alone, of all the works of its Maker, contains no living thing within it.

While in full view of the peninsula, I named its northern ex-

tremity "Point Costigan," and its southern one "Point Molyneux," as a tribute to the memories of the two gallant Englishmen who lost their lives in attempting to explore this sea.

At 11.42, much frothy scum; picked up a dead bird resembling a quail; sounding every five minutes, depth increasing to four feet, bottom a little firmer; the only ford must be about here.

At 12.21, there was a very loud, reverberating report, as of startling thunder, and a cloud of smoke and dust on the western shore; most probably caused by a huge rock falling from a high cliff.

In two hours, we were close in with the eastern shore, but unable to land from the soft bottom and shoalness of the water. At 2.50, a light breeze from W. N. W.; hauled to the north towards the base of the peninsula. A long, narrow dry marsh, with a few scrubby bushes, separated the water from a range of stupendous hills, 2000 feet high. The cliff of En Nuweireh (Little Tiger), lofty and grand, towered above us in horizontal strata of brown limestone, and beautiful rose-coloured sandstone beneath. Clouds in the east, nimbus, seemed to be threatening a gust. Steered along a low marshy flat, in shallow water. The light wind subsided, and it became oppressively hot; air 97°; water twelve inches below the surface 90°. A thin purple haze over the mountains, increasing every moment, and presenting a most singular and awful appearance; the haze so thin that it was transparent, and rather a blush than a distinct colour. I apprehended a thunder-gust or an earthquake, and took in the sail. At 3.50, a hot, blistering hurricane struck us from the south-east, and for some moments we feared being driven out to sea. The thermometer rose immediately to 102°. The men, closing their eyes to shield them from the fiery blast, were obliged to pull with all their might to stem the rising waves, and at 4.30, physically exhausted, but with grateful hearts, we gained the shore. My own eye-lids were blistered by the hot wind, being unable to protect them, from the necessity of steering the boat.

We landed on the south side of the peninsula, near Wady Humeir, the most desolate spot upon which we had yet encamped.

Some went up the ravine to escape from the stifling wind; others, driven back by the glare, returned to the boats and crouched under the awnings. One mounted spectacles to protect his eyes, but the metal became so heated that he was obliged to remove them. Our arms and the buttons on our coats became almost burning to the touch; and the inner folds of our garments were cooler than those exposed to the immediate contact of the wind. We bivouacked without tents, on a dry marsh, a few dead bushes around us, and some of the thorny nŭbk, and a tree bearing a red berry a short distance inland, with low canes on the margin of the sea.

At 5, finding the heat intolerable, we walked up the dry torrent bed in search of water. Found two successive pools rather than a stream, with some minnows in them; the water not yet stagnant, flowing from the upper to the lower pool. There were some succulent plants on their margins, and fern roots, and a few bushes around them. There were huge boulders of sandstone in the bed of the ravine; a dead palm-tree, near the largest pool, a living one in a cleft of the rock at the head of the gorge; and high up, to the summits of the beetling cliffs, the sandstone lay in horizontal strata, with perpendicular cleavage, and limestone above, its light brown colour richly contrasting with the deep red below.

The sandstone below limestone here, and limestone without sandstone on the opposite shore, would seem to indicate a geological fault.

Washed and bathed in one of the pools, but the relief was only momentary. In one instant after leaving the water, the moisture on the surface evaporated, and left the skin dry, parched, and stiff. Except the minnows in the pool, there was not a living thing stirring; but the hot wind swept moaning through the branches of the withered palm-tree,[1] and every bird and insect, if any there were, had sought shelter under the rocks.

Coming out from the ravine, the sight was a singular one. The wind had increased to a tempest; the two extremities and

[1] The date-palm.

the western shore of the sea were curtained by a mist, on this side of a purple hue, on the other a yellow tinge; and the red and rayless sun, in the bronzed clouds, had the appearance it presents when looked upon through smoked glass. Thus may the heavens have appeared just before the Almighty in his wrath rained down fire upon the cities of the plain. Behind were the rugged crags of the mountains of Moab, the land of incest, enveloped in a cloud of dust, swept by the simoom from the great desert of Arabia.

There was a smoke on the peninsula a little to the north of us. We knew not whether those who made it might prove friends or foes; and therefore that little smoke was not to be disregarded. We had brought one of the Ta'âmirah with us, for the express purpose of communicating with the natives, but he was so fearful of their hostility that I could not prevail on him to bear a message to them. With his back to the wind, and his eyes fixed on the streaming smoke, he had squatted himself down a short distance from us. He thought that we would be attacked in the night; I felt sure that we would not, if we were vigilant. These people never make an attack but at advantage, and fifteen well-armed Franks can, here, bid defiance to anything but surprise.

We have not seen an instance of deformity among the Arab tribes. This man was magnificently formed, and when he walked it was with the port and presence of a king. It has been remarked that races with highly coloured skins are rarely deformed; and the exemption is attributed, perhaps erroneously, not to a mode of life differing from that of a civilized one, but to hereditary organization.

The sky grew more angry as the day declined;

> "The setting orb in crimson" seemed "to mourn,
> Denouncing greater woes at his return,
> And adds new horrors to the present doom
> By certain fear of evils yet to come."

The heat rather increased than lessened after the sun went down. At 8 P. M., the thermometer was 106° five feet from the ground. At one foot from the latter it was 104°. We threw ourselves upon the parched, cracked earth, among dry stalks and canes,

which would before have seemed insupportable from the heat. Some endeavoured to make a screen of one of the boats' awnings, but the fierce wind swept it over in an instant. It was more like the blast of a furnace than living air. At our feet was the sea, and on our right, through the thicket, we could distinguish the gleaming of the fires and hear the shouts from an Arab encampment.

In the early part of the night, there was scarce a moment that some one was not at the water-breakers; but the parching thirst could not be allayed, for, although there was no perceptible perspiration, the fluid was carried off as fast as it was received into the system. At 9, the breakers were exhausted, and our last waking thought was water. In our disturbed and feverish slumbers, we fancied the cool beverage purling down our parched and burning throats. The mosquitoes, as if their stings were envenomed by the heat, tormented us almost to madness, and we spent a miserable night, throughout which we were compelled to lie encumbered with our arms, while, by turns, we kept vigilant watch.

We had spent the day in the glare of a Syrian sun, by the salt mountain of Usdum in the hot blast of the sirocco, and were now bivouacked under the calcined cliffs of Moab. When the water was exhausted, all too weary to go for more, even if there were no danger of a surprise, we threw ourselves upon the ground,—eyes smarting, skin burning, lips, and tongue, and throat parched and dry; and wrapped the first garment we could find around our heads to keep off the stifling blast; and, in our brief and broken slumbers, drank from ideal fountains.

Those who have never *felt* thirst, never suffered in a simoom in the wilderness, or been far off at sea, with

> "Water, water everywhere,
> Nor any drop to drink,"

can form no idea of our sensations. They are best illustrated by the exclamation of the victim in Dante's Inferno.

> "The little rills which down the grassy side
> Of Casentino flow to Arno's stream,

Filling their banks with verdure as they glide,
Are ever in my view; — no idle dream —
For more that vision parches, makes we weak,
Than that disease which wastes my pallid cheek."

Our thoughts could not revert to home save in connexion with the precious element; and many were the imaginary speeches we made to visionary common councils against ideal water-carts, which went about unsubstantial city streets, spouting the glorious liquid in the very wastefulness of abundance, every drop of which seemed priceless pearls, as we lay on the shore of the Dead Sea, in the feverish sleep of thirst.

The poor affrighted Arab slept not a wink; for, repeatedly, when I went out, as was my custom, to see that all was quiet and the sentries on the alert, he was ever in the same place, looking in the same direction.

At midnight the thermometer stood at 98°; shortly after which the wind shifted and blew lightly from the north. At 4 A. M., thermometer, 82°; comparatively cool.

Thursday, April 27. The first thing on waking, at day-break, I saw a large, black bird, high overhead, floating between us and the mottled sky. Shortly after, a large flock of birds flew along the shore, and a number of storks were noiselessly winging their way in the gray and indistinct light of the early morning. Calm and warm; — went up and bathed in the ravine. There were voices in the cliffs overhead, and shortly after there was the report of a gun, the reverberating echoes of which were distinctly heard at the camp. As I had gone unattended, the officers were alarmed, and some went to look for me. Our Arab was exceedingly nervous. The gun was doubtless a signal from a look-out on the cliff to his friends inland, for these people live in a constant state of civil warfare, and station sentinels on elevated points to give notice of a hostile approach. I thought that we inspired them with more fear than they did us. Heard a partridge up in the cliffs, and saw a dove and a beautiful humming-bird in the ravine.

There were some fellahas (female fellahin) on a plain to the

northward of us. They allowed Mŭstafa to approach within speaking distance, but no nearer. They asked who we were, how and why we came, and why we did not go away. About an hour after, some thirty or forty fellahin, the Sheikh armed with a sword, the rest with indifferent guns, lances, clubs, and branches of trees, came towards us, singing the song of their tribe. I drew our party up, and, with the interpreter, advanced to meet them. When they came near, I drew a line upon the ground, and told them that if they passed it they would be fired upon. Thereupon, they squatted down, to hold a palaver. They belonged to the Ghaurârîyeh, and were as ragged, filthy, and physically weak, as the tribe of Rashâyideh, on the western shore. Finding us too strong for a demand, they begged for backshish. We gave them some food to eat, for they looked famished; also a little tobacco and a small gratuity, to bear a letter to 'Akīl, (who must soon be in Kerak,) appointing when and where to have a look-out for us.

Before starting, we took observations, and angled in every direction.

The Arabs gathered on the shore to see us depart, earnestly asking Mŭstafa how the boats could move without legs; he bade them wait awhile, and they would see very long ones. The Fanny Mason sounded directly across to the western shore; the casts taken at short intervals, varying from one and three-quarters to two and a quarter fathoms; bottom, light and dark mud.

This shallow bay is mentioned in Joshua, xv. 2. Everything said in the Bible about the sea and the Jordan, we believe to be fully verified by our observations.

On our way, picked up a dead quail, which had probably perished in attempting to fly over the sea; perhaps caught in last night's sirocco. Soon after, saw appearances of sand-spits on the surface of the sea, doubtless the optical delusion which has so often led travellers to mistake them for islands. Sent the Fanny Skinner to Point Molyneux, the south end of the peninsula, to take meridian observation; much frothy scum upon the water. Landed at Wady Muhariwat (Surrounded ravine), on the western shore,

where a shallow salt stream, formed by a number of springs oozing from a bank covered with shrubs, spread itself over a considerable space, and trickled down over the pebbles into the sea. There were some very small fish in the stream. Thermometer, 96°.

Started again, and steered parallel with the western shore. Keeping about one-third the distance between the western shore and the peninsula, the soundings ranged steadily at two and a quarter fathoms; first part light, the second part dark mud. At the expiration of two hours, encountered a very singular swell from north-west,—an undulation, rather; for the waves were glassy, with an unbroken surface, and there was not air enough stirring to move the gossamer curls of a sleeping infant. We knew well of what it was the precursor, and immediately steered for the land. We had scarcely rowed a quarter of an hour, the men pulling vigorously to reach the shelter of the cliffs, when we were struck by a violent gust of hot wind,—another sirocco. The surface of the water became instantly ruffled; changing in five minutes from a slow, sluggish, unbroken swell, to an angry and foaming sea.

With eyes smarting from the spray, we buffeted against it for upwards of an hour, when the wind abruptly subsided, and the sea as rapidly became smooth and rippling. The gust was from the north-west. The wind afterwards became light and baffling,—at one moment fair, the next directly ahead; the smooth surface of the water unbroken, except a light ruffle here and there, as swept by the flickering airs.

Stopped for the night in a spacious bay, on a fine pebbly beach, at the foot of Rûbtât el Jâmûs (Tying of the Buffalo). It was a desolate-looking, verdureless range above us. There was no water to be found, and our provisions were becoming scarce; we made a scanty supper, but had the luxury of a bed of pebbles, which, although hard and coarse, was far preferable to the mud and dust of our last sleeping-place. We hoped, too, to have but a reasonable number of insect-bedfellows.

Mr. Dale described the extreme point of the peninsula upon

which he landed as a low flat, covered with incrustations of salt and carbonate of lime. It was the point of the margin: there was a corresponding point to the high land, which is thinly laminated with salt. They picked up some small pieces of pure sulphur. In a cave, were tracks of a panther. After leaving the point, he saw a small flock of ducks and a heron, which were too shy to permit a near approach.

Before retiring, our Arabs, who had gone for hours in a fruitless search for water, returned with some dhom apples (fruit of the nŭbk), which amazingly helped out the supper.

I do not know what we should have done without these Arabs; they brought us food when we were nearly famished, and water when parched with thirst. They acted as guides and messengers, and in our absence faithfully guarded the camp. A decided course tempered with courtesy, wins at once their respect and good will. Although they are an impetuous race, not an angry word had thus far passed between us. With the blessing of God, I hoped to preserve the existing harmony to the last.

Took observations of Polaris. The north-west wind, hot and unrefreshing, sprang up at 8 P. M., and blew through the night.

Friday, April 28. Breakfasted "à la hâte" on a small cup of coffee each, and started at sunrise. If the wind should spring up fair, we purposed sailing over to the Arnon; in the mean time we coasted along the shore towards Ain Jidy, for the water was exhausted, and we must make for the camp if a calm or a head wind should prevail. At 7.30, the wind freshened up from N. E. A little north of Sebbeh we passed a long, low, gravelly island, left uncovered by the retrocession of the water. A great refraction of the atmosphere. The Fanny Skinner round the point, seemed elevated above it. Her whole frame, from the surface of the water, was distinctly visible, although the land intervened. Our compass glass was incrusted with salt.

Notwithstanding the high wind, the tendency to drowsiness was almost irresistible. The men pulled mechanically, with half-closed lids, and, except them and myself, every one in the copper boat was fast asleep. The necessity of steering and observing all

that transpired, alone kept me awake. The drowsy sensation, amounting almost to stupor, was greatest in the heat of the day, but did not disappear at night. In the experience of all, two hours' watch here seemed longer than double the period elsewhere. At 1.30 P. M., nearly up with Ain Jidy; the white tents of the camp, the line of green, and the far-off fountain, speaking of shade, refreshment and repose. A camel was lying on the shore, and two Arabs a little beyond. Discerning us, the latter rose quickly and came towards the landing, shouting, singing, and making wild gesticulations, and one of them stooped and picked up a handful of earth and put it upon his head. Here the Sherîf met us with a delight too simple-hearted in its expression to be insincere. The old man had been exceedingly anxious for our safety, and seemed truly overjoyed at our return. We were also much gratified to find that he had been unmolested.

One of the Arabs whom we sent back from Usdum fell fainting on his return, and nearly famished for want of water. His companions, suffering from the same cause, were compelled to leave him on the parched and arid shore and hasten forward to save themselves. Fortunately there was a messenger in the camp, who had come on horseback from Jerusalem, and Sherîf was enabled to send water forthwith, and have the poor man brought to the tents.

Found letters awaiting us from Beïrût, forwarded express from Jerusalem. Our consul at the former place announced the death of John Quincy Adams, Ex-President of the U. States, and sent an extract from a Malta paper containing the annunciation. These were the first tidings we had received from the outer world, and their burthen was a sad one. But on that sea, the thought of death harmonized with the atmosphere and the scenery, and when echo spoke of it, where all else was desolation and decay, it was hard to divest ourselves of the idea that there was nothing but death in the world, and we the only living:—

> "Death is here, and death is there,
> Death is busy everywhere."

We lowered the flag half-mast, and there was a gloom throughout the camp.

Among the letters, I received one from the Mushir of Saida. After many compliments, he promised to reprimand Sa'id Bey for the grasping spirit he had evinced, and authorized our ally, 'Akīl, to remain with us as long as we might desire.

In the evening we walked up the ravine to bathe. It was a toilsome walk over the rough debris brought down by the winter rains. A short distance up, we were surprised to see evidences of former habitations in the rocks. Roughly hewn caverns and natural excavations we had frequently observed, but none before evincing so much art. Some of the apertures were arched and cased with sills of limestone resembling an inferior kind of marble. We were at a loss how to obtain an entrance, for they were cut in the perpendicular face of the rock, and the lowest more than fifty feet from the bed of the ravine. We stopped to plan some mode of gaining an entrance to one of them; but the sound of the running stream, and the cool shadow of the gorge were too inviting, and advancing through tamarisk, oleander, and cane, we came upon the very Egeria of fountains. Far in among the cane, embowered, imbedded, hidden deep in the shadow of the purple rocks and the soft green gloom of luxuriant vegetation, lapsing with a gentle murmur from basin to basin, over the rocks, under the rocks, by the rocks, and clasping the rocks with its crystal arms, was this little fountain-wonder. The thorny nŭbk and the pliant osher were on the bank above; yet lower, the oleander and the tamarisk; while upon its brink the lofty cane, bent by the weight of its fringe-like tassels, formed bowers over the stream fit for the haunts of Naiads. Diana herself could not have desired a more secluded bath than each of us took in a separate basin.

This more probably than the fountain of Ain Jidy (Engaddi), high up the mountain, may be regarded as the genuine "diamond of the desert"—and in one of the vaulted caves above, the imagination can dwell upon the night procession, Edith Plantagenet, and the flower dropped in hesitation and picked

up with avidity; the pure, disinterested aspirations of the Crusader, the licentious thoughts of the Saracen, and the wild, impracticable visions of the saintly enthusiast. One of those caverns, too, since fashioned by the hand of man, may have been the veritable cave of "Adullam," for this is the wilderness of Engaddi.[1] Here too may have been the dwellings of the Essenes, prior to the days of Christianity, and subsequently of hermits, when Palestine was under Christian sway. Our Arabs say that these caves have been here from time immemorial, and that many years ago some of the tribe succeeded in entering one of them, and found vast chambers excavated in the rock. They may have been the cells where "gibbered and moaned" the hermit of Engaddi.

Having bathed, we returned much refreshed to the camp. The messenger had brought sugar and lemons, and, with abundance of water, we had lemonade and coffee; and, sheltered from the sun, with the wind blowing through the tent, we revelled in enjoyment. This place, which at first seemed so dreary, had now become almost a paradise by contrast. The breeze blew freshly, but it was so welcome a guest, after the torrid atmosphere of noon, that we even let it tear up the tent-stakes, and knock the whole apparatus about our ears, with a kind of indulgent fondness, rather disposed to see something amusing in the flutter among the half-dried linen on the thorn-bushes. This reckless disregard of our personal property bore ample testimony to the welcome greeting of the wind.

At one time, to-day, the sea assumed an aspect peculiarly sombre. Unstirred by the wind, it lay smooth and unruffled as an inland lake. The great evaporation enveloped it in a thin, transparent vapour, its purple tinge contrasting strangely with the extraordinary colour of the sea beneath, and, where they blended in the distance, gave it the appearance of smoke from burning sulphur. It seemed a vast cauldron of metal, fused but motionless.

About sunset, we tried whether a horse and a donkey could

[1] "And David went up from thence, and dwelt in strong holds at Engaddi."—1 Samuel, xxiii. 29.

swim in the sea without turning over. The result was that, although the animals turned a little on one side, they did not lose their balance. As Mr. Stephens tried his experiment earlier in the season, and nearer the north end of the sea, his horse could not have turned over from the greater density of the water there than here. His animal may have been weaker, or, at the time, more exhausted than ours. A muscular man floated nearly breast-high without the least exertion.

Pliny says that some foolish, rich men of Rome had water from this sea, conveyed to them to bathe in, under the impression that it possessed medicinal qualities. Galen remarked on this that they might have saved themselves the trouble, by dissolving, in fresh water, as much salt as it could hold in solution; to which Reyland adds, that Galen was not aware that the water of the Dead Sea held other things besides salt in solution.

We picked up a large piece of bitumen on the sea-shore to-day. It was excessively hot to the touch. This combustible mineral is so great a recipient of the solar rays, that it must soften in the intense heat of summer. We gathered also some of the blossoms and the green and dried fruits of the osher for preservation with the flowers collected in the descent of the Jordan, and the various places we have visited on this sea.

The dried fruit, the product of last year, was extremely brittle, and crushed with the slightest pressure. The green, half-formed fruit of this year was soft and elastic as a puff-ball, and, like the leaves and stem, yields a viscous, white, milky fluid when cut. Dr. Robinson very aptly compared it to the milk-weed. This viscous fluid the Arabs call leben-usher (osher-milk), and they consider it a cure for barrenness. Dr. Anderson was enthusiastic in his researches, and although he kept his regular watch, was ever, when not on post, hammering at the rocks. He had already collected many valuable specimens.

Through the night, a pleasant breeze from the west. Blowing over the wilderness of Judea, it was unaccompanied with a nauseous smell. Towards morning, the wind hauled to the north and freshened—strange that the weather should become warmer

as the wind veered to the northern quarter; but so it was. Sweeping along the western shore, it brought the fœtid odour of the sulphureous marshes with it. The Arabs call this sea Bahr Lût (Sea of Lot), or Birket Lût (Pool of Lot).

Saturday, April 29. Awakened at daylight by one of the Arabs calling the rest to prayer. The summons but slightly heeded. Soon after breakfast, sent the Fanny Skinner to sound in a north and south line, between the peninsula and the western shore. Wind fresh from N. W. Sent a detachment to explore the ruins of Masada. Experienced some difficulty in getting the boats through the surf.

Remained in camp to write a report of proceedings to the Hon. Secretary of the Navy, and to answer the kind letters of H. B. M. Consul at Jerusalem, and Mr. Chasseaud, U. S. Consul at Beïrût. Every thing quiet; and, towards noon, as the wind subsided, the sea assumed its sombre and peculiar hue.

At noon, fired out at sea, in honour of the illustrious dead, twenty-one minute-guns from the heavy blunderbuss mounted on the bow of the Fanny Mason. The reports reverberated loudly and strangely amid the cavernous recesses of the lofty and barren mountains. This sea is wondrous, in every sense of the word; so sudden are its changes, and so different the aspects it presents, as to make it seem as if we were in a world of enchantment. We were alternately upon the brink and the surface of a huge, and sometimes seething cauldron. Picked up a piece of scoriated lava.

At 1 P. M., Mr. Aulick returned. He reported a gradual decrease of soundings to thirteen fathoms, nearly up the slope to the shallow basin of the southern sea. Everything favours the supposition that the guilty cities stood on the southern plain, between Usdum and the mountains of Moab. The northern part must have been always water, or the plain have sunk at the time of the catastrophe.

Protected by our presence from the fear of robbers, some of the Ta'âmirah came in to harvest their few scanty patches of barley. They cut the grain, with their swords for reaping-hooks, and threw it upon the threshing-floor,—a circular piece of hard, trampled

ground, around which were driven three donkeys, abreast. It was a slow and wasteful process. The little unmuzzled brutes were, in their rounds, permitted to nip the upturned ears. We had often noticed the humanity of this people towards the brute creation. In a moment of excitement Sherîf wounded a stork, but seemed sincerely sorry for it afterwards. The Arab who brought the wild boar pigs to sell, cut their throats rather than turn them adrift, when they would have perished for want of food, which they were too young to procure. These Arabs always express great horror at anything like wanton cruelty towards animals. And yet 'Akīl looked upon the woman whose husband he had slain, without the drooping of an eyelid, or the visible relaxation of a muscle. It is for philosophers to account for this trait of humanity towards animals, in a race proverbially reckless of the lives of their fellow-creatures.

The small quantity of grain these people could spare, we purchased for distribution at home. In the afternoon, mounted on Sherîf's spirited horse, I went up to the fountain of Ain Jidy. It is a clear, beautiful stream, issuing from the rock, skirted by the cane and shadowed by the nŭbk, four hundred feet up the mountain. The view from it was magnificent, particularly towards Usdum and the southern basin of the sea.

CHAPTER XV.

FROM CAMP TO THE CAPITAL OF MOAB.

Sunday, April 30. This morning, like the land we are in, we enjoyed our Sabbath, and slept until the sun and flies compelled us to get up. The atmosphere of the tent being oppressive, we breakfasted outside in its shade. Some of us spent the forenoon in the quiet recesses of the ravine, endeavouring to observe the day. Thus far, all, with one exception, had enjoyed good health,

but there were symptoms which caused me uneasiness. The figure of each one had assumed a dropsical appearance. The lean had become stout, and the stout almost corpulent; the pale faces had become florid, and those which were florid, ruddy; moreover, the slightest scratch festered, and the bodies of many of us were covered with small pustules. The men complained bitterly of the irritation of their sores, whenever the acrid water of the sea touched them. Still, all had good appetites, and I hoped for the best.[1] There could be nothing pestilential in the atmosphere of the sea. There is little verdure upon its shores, and, by consequence, but little vegetable decomposition to render the air impure: and the fœtid smell we had frequently noticed, doubtless proceeded from the sulphur-impregnated thermal springs, which were not considered deleterious. Three times, it is true, we had picked up dead birds, but they, doubtless, had perished from exhaustion, and not from any malaria of the sea, which is perfectly inodorous, and, more than any other, abounds with saline exhalations, which, I believe, are considered wholesome. Our Ta'âmirah told us that, in pursuance of the plan he had adopted with regard to the settlement of the Ghor, Ibrahim Pasha sent three thousand Egyptians to the shores of this sea, about ten years since, and that every one died within two months. This is, no doubt, very much exaggerated.

There was, most probably, much mortality among the poor wretches, forced from their fertile plains to this rugged and inhospitable shore; but dejection of spirits, and scarcity of food, must have been the great destroyers.

P. M., started for the eastern shore, leaving Sherîf again in charge, with directions to move the camp to Ain Turâbeh, on Wednesday. This was the day appointed to meet 'Akīl, and I felt sure that he would not fail us.

A light air from the south induced me to furl the awning

[1] Wherever there is an evil there is usually its antidote near at hand; and, perhaps, the remedy for these cutaneous diseases is to be found in the acrid juices of the osher, which grows here and upon the southern shores of this sea.

and set the sail to spare the men from labouring at the oars. A light tapping of the ripples at the bow, and a faint line of foam and bubbles at her side, were the only indications that the boat was in motion. The Fanny Skinner was a mile astern, and all around partook of the stillness of death. The weather was intensely hot, and even the light air that urged us almost insensibly onward had something oppressive in its flaws of heat. The sky was unclouded, except by a few faint cirri in the north, sweeping plume-like, as if the sun had consumed the clouds, and the light wind had drifted their ashes. The glitter from the water, with its multitude of reflectors, for each ripple was a mirror, contributed much to our discomfort; yet the water was not transparent, but of the colour of diluted absinthe, or the prevailing tint of a Persian opal. The sun, we felt, was glaring upon us, but the eye dared not take cognizance, for the fierce blaze would have blighted the powers of vision, as Sĕmĕle was consumed by the unveiled divinity of Jove.

The black chasms and rough peaks, embossed with grimness, were around and above us, veiled in a transparent mist like visible air, that made them seem unreal,—and, 1300 feet below, our sounding-lead had struck upon the buried plain of Siddim, shrouded in slime and salt.

While busied with such thoughts, my companions had yielded to the oppressive drowsiness, and now lay before me in every attitude of a sleep that had more of stupor in it than of repose. In the awful aspect which this sea presented, when we first beheld it, I seemed to read the inscription over the gate of Dante's Inferno:—"Ye who enter here, leave hope behind." Since then, habituated to mysterious appearances in a journey so replete with them, and accustomed to scenes of deep and thrilling interest at every step of our progress, those feelings of awe had been insensibly lessened or hushed by deep interest in the investigations we had pursued. But *now*, as I sat alone in my wakefulness, the feeling of awe returned; and, as I looked upon the sleepers, I felt "the hair of my flesh stand up," as Eliaphaz the Themanite's did, when "a spirit passed before his face;" for, to my disturbed ima-

gination, there was something fearful in the expression of their inflamed and swollen visages. The fierce angel of disease seemed hovering over them, and I read the forerunner of his presence in their flushed and feverish sleep. Some, with their bodies bent and arms dangling over the abandoned oars, their hands excoriated with the acrid water, slept profoundly;—others, with heads thrown back, and lips, cracked and sore, with a scarlet flush on either cheek, seemed overpowered by heat and weariness even in sleep; while some, upon whose faces shone the reflected light from the water, looked ghastly, and dozed with a nervous twitching of the limbs, and now and then starting from their sleep, drank deeply from a breaker and sunk back again to lethargy. The solitude, the scene, my own thoughts, were too much; I felt, as I sat thus, steering the drowsily-moving boat, as if I were a Chăron, ferrying, not the souls, but the bodies of the departed and the damned, over some infernal lake, and could endure it no longer; but breaking from my listlessness, ordered the sails to be furled and the oars resumed—action seemed better than such unnatural stupor.

Prudence urged us to proceed no farther, but to stop, before some disaster overtook us; but the thought of leaving any part of our work undone was too painful, and I resolved to persevere, but to be as expeditious as possible without working the party too hard.

At 4.10 P.M., reached "Point Costigan," north end of the peninsula, and steered S. S. E. across the bay, to search for water and for signals from 'Akīl. The heat was still intense, rendered less endurable by the bright glare from the white spiculæ of the peninsula, and the dazzling reflection from the surface of the sea Sounded in twenty-four fathoms, hard bottom, about gun-shot distance from the land. In a few minutes, saw an Arab on the shore among the low canes and bushes, and shortly after several others. Preparing for hostilities, yet in the hope of a friendly reception, we pulled directly in and hailed them. To our great delight one of them proved to be Jum'ah (Friday), sent by 'Akīl, who yesterday arrived at Kerak. We immediately landed, and

bivouacked upon the beach, a short distance from a shallow stream descending the Wady Beni Hamed.

'Akīl, on leaving us at 'Ain el Feshkhah, endeavoured, according to agreement, to find his way to the eastern shore and thence to Kerak. On his way, he stopped with some of his friends, a portion of the tribe of Beni Sükrs from Salt. In the night they were unexpectedly attacked by a party of Beni 'Adwans. At first, being much inferior in numbers, they retreated, 'Akīl losing his camel and all his baggage. Subsequently they were strongly reinforced, and became assailants in their turn. The action lasted several hours; they had twelve wounded, including two of 'Akīl's followers, and twenty-two of the 'Adwans were reported to be killed and wounded, among the former the son of the Sheikh. 'Akīl's Nubian was twice wounded in the arm, once by a gunshot, and once by the thrust of a spear. The rifle of the hostile young Sheikh was given to Sherîf Musaid, nephew of Sherîf Hazāa, for his gallantry in the action.

We learned from Jum'ah that there were two Sheikhs or Governors in Kerak, a Christian one, who could muster 250 riflemen, and a Muslim one, whose followers were mostly mounted, and far more numerous;—the former wholly subservient to the latter.

At 7.30 P. M., Suliemân, the son of Abd 'Allah, Christian Sheikh of Kerak, with four followers, arrived with a welcome and an invitation from his father to visit him in his mountain fortress, seventeen miles distant, saying that he would have come himself if certain of meeting us. They had been despatched at 'Akīl's instance at early daybreak, and from the mountains, on their way down, saw us crossing the sea. An invitation was also received from the Muslim Sheikh. I accepted it with a full sense of the risk incurred; but the whole party was so much debilitated by the sirocco we had experienced on the south side of the peninsula, and by the subsequent heat, that it became absolutely necessary to reinvigorate it at all hazards. I felt sure that Jum'ah would carefully guard our boats in our absence, and therefore sent to 'Akīl, through whom alone I had resolved to hold transactions with this people, for horses and mules for the party. He

had sent an apology for not coming in person on account of his wounded followers, and in consequence of all their horses being foundered.

Wady Kerak is at the S. E. extremity of the bay. Between it and us is the village of Mezra'a, and in the near vicinity of the latter are the supposed ruins of Zoar. To-morrow we will continue the exploration of this deep and interesting bay.

Between the camp and the stream, and scattered on the plain, are groves of acacia, and many osher trees as large as half-grown apple trees, and with larger fruit than any we had seen. We gathered some of the size of the largest lemon, but green, soft, and pulpy; emitting, like the branches, a viscous milky fluid when cut, which the Arabs told us would be extremely injurious to the eyes if it touched them. There was some of the dried fruit too, as brittle as glass, and flying to pieces on the slightest pressure. Within the last was a very small quantity of a thin, silky fibre, which is used by the Arabs for gun-matches. The rind is thinner, but very much in colour like a dried lemon, and the dried fruit has the appearance of having spontaneously bursted.

An Arab from Mezra'a brought us some detestably sour leban and some milk, but of which few could endure the smell, caused by the filthy goat-skins which contained them, and which, it seems, are never washed. He also brought some flour made of the dhom apple, dried and pulverized, which was very palatable.

The Sheikh of Mezra'a, with some of his people, also came in. Together with the fellahin tribes at the south end of the sea, they are generally denominated Ghaurârîyeh. They are much darker, and their hair more wiry and disposed to curl than any Arabs we have seen. Their features as well as their complexion are more of the African type, and they are short and spare built, with low receding foreheads, and the expression of countenance is half sinister and half idiotic. Their only garment is a tunic of brief dimensions, open at the breast and confined round the waist by a band or leathern belt. The Sheikh has rude sandals, fastened by thongs; the rest are barefooted. The women are even more

abject-looking than the men, and studiously conceal their faces. They all, men and women, seem to bear impressed upon their features, the curse of their incestuous origin.

Their village, Mezra'a, is on the plain about half an hour, or one mile and a half distant. Their houses are mere hovels plastered with mud. They cultivate the dhoura (millet), tobacco, and some indigo, a specimen of which we procured.

The deputation from Kerak expressed great delight at beholding fellow-Christians upon the shores of this sea, and said that if they had known of our first arrival on the western shore, they would have gone round and invited us over. It was a strange sight to see these wild Arab Christians uniting themselves to us with such heartfelt cordiality. It would be interesting to trace whether they are some of the lost tribes subsequently converted to Christianity; or the descendants of Christians, who, in the fastnesses of the mountains, escaped the Muhammedan alternative of the Koran or the sword; or a small Christian remnant of the Crusades. At all events, their gratification at meeting us was unfeigned and warmly expressed. They felt that we would sympathize with them in the persecutions to which they are subjected by their lawless Muslim neighbours. They had, indeed, our warmest sympathies, and our blood boiled as we listened to a recital of their wrongs. We felt more than ever anxious to visit Kerak, and judge for ourselves of their condition. Their mode of salutation approaches nearer to our own than that of any other tribe we met; they shake hands, and then each kisses the one he had extended. They had never seen a boat, which in the language of the country, is called "choctura," and supposing that ours must have feet, examined them with great curiosity. They could not believe that anything larger could be made to float. In the course of the evening, one of the fellahin from Mezra'a, when he first beheld them, stood for some time lost in contemplation, and then burst forth in joyful shouts of recognition. He was an Egyptian by birth, and stolen from his home when quite young, had forgotten everything connected with his native country, until the sight of our boats reminded him of having seen things resembling them;

and the Nile, and the boats upon its surface, and the familiar scenes of his childhood, rushed upon his memory. It was interesting to see the dull and clouded intellect gradually lighten up as the remembrance of the past broke in upon it; yet it was sad, for the glad smile of the Egyptian died away, and left a sorrowing expression upon his features—for from the Nile, his dormant affections had, perhaps, reverted to the hovel upon its banks—and he thought of his mother and young barbarian playmates.

These Christian Arabs are of the tribe Beni Khallas (Sons of the Invincible), a name inappropriate to their present condition. Their features are fuller and more placid in expression, and they seem more vigorous, manly, and intelligent than the Raschâyideh and Ta'âmirah of the Judean shore. After dinner, partaken by the light of the camp-fires, we set the watch and threw ourselves upon the shelving beach, each one wrapping up his head to screen it from the fresh wind. Our Christian Arabs kept watch and ward with us through the night, for they had reason to know that the Mezra'a people were dangerous neighbours.

Monday, May 1. A calm and warm but not unpleasant morning; thermometer, 83°. Completed the topographical sketch of the shore-lines of the bay, and verified the position of the mouth of Wady Kerak, and sounded down the middle of the bay.

Overhauled the copper boat, which wore away rapidly in this briny sea. Such was the action of the fluid upon the metal, that the latter, as long as it was exposed to its immediate friction, was as bright as burnished gold, but whenever it came in contact with the air, it corroded immediately.

The stones on the beach were encrusted with salt, and looked exactly as if whitewashed.

It was well that we despatched 'Akīl in advance to the Arabian tribes, for the Sheikh of Mezra'a told Jum'ah that, when he first saw us coming, he hastened to collect his followers, with the determination of attacking us, and only changed his purpose when he heard him greet us as friends. It would have been a matter of regret had they fired upon us; for, although we would most certainly have defeated them, there must have been blood shed,

and it was my most earnest wish to accomplish the objects of the expedition without injury to a human being.

P. M. Rode out upon the plain, with two Arabs on foot, to look for the ruins of Zoar. Pursuing a S. E. direction, up the peninsula, passed, first, some dhoura (millet) fields, the grain but a few inches above the ground—many of the fields yet wet from recent irrigation. Thence rode through many tangled tickets of cane and tamarisk, with occasional nŭbk and osher trees, and came, at length, upon an open space, with many large heaps of stones in regular rows, as if they had once formed houses. They were uncut, and had "never known iron;" but there were no other vestiges of a building about them;—so I concluded that they were the larger stones which had encumbered the soil, and were gathered by the fellahin.

Proceeding a little more to the south, we came to many more such mounds or heaps, and, among them, to the foundation of a building of some size. It was in the form of a main building, with a smaller one before or behind it; the first being a quadrangular wall, and the other in detached pieces, like the pedestals of columns. The stones were large, some of them one and a half feet in diameter, uncut, but roughly hewn, and fitted on each other with exactness, but without mortar. There were many minute fragments of pottery scattered about on the soil; and among the rubbish I found an old hand-mortar, very much worn, which I brought away. The ruined foundation bore the marks of great antiquity; and the site corresponds to the one assigned by Irby and Mangles as that of Zoar. But I could see no columns and no other vestiges of ruins than what I have mentioned.

Returning, saw the horses and mules for which we had sent, coming down the mountains, and waited for them in the plain. They were accompanied by Muhammed, the son of Abd'el Kâdir, the Muslim Sheikh of the Kerakîyeh, and by Abd' Allah, the Christian Sheikh of the Beni Khallas; the latter residing in the town of Kerak, the former living mostly in black tents, about half a mile distant from it.

On our way to camp, Muhammed endeavoured to display

his horsemanship; but the animal, wearied by the rough mountain-road he had travelled, fell to the ground, and his rider was compelled to jump off to save himself. In mounting again, not finding any thing more convenient, he arrogantly ordered one of the fellahin to stoop, and, placing his foot upon the abject creature's back, sprung upon his horse.

This Muhammed is about thirty years of age, short but compactly built, with a glossy, very dark-mahogany skin, long, coarse black hair, and a thick, black beard and moustache. His eye, fiery but furtive, was never fixed in its gaze, but, rolling restlessly from one object to another, seemed rather the glare of a wild beast than the expression of a human eye. Altogether, we thought that he had the most insolent and overbearing countenance and manner we had ever seen.

Abd' Allah, the Christian Sheikh, about twenty years his senior, was a very different person; robust in frame, he was mild even to meekness. In the bearing of the respective parties towards each other, we could read a long series of oppression on one side and submissive endurance on the other.

They brought me a letter from 'Akīl, of which the following is a literal translation:—

DIRECTION.

"By God's favour. May it reach Haditheh, and be delivered to the hand of the Excellency of our Beloved.

"May God preserve him. Beduah, 8642."

INSIDE.

"To the Excellency of the most honourable, our dear friend—May the Almighty God preserve him.

"We beg, first, to offer you our love and great desire to see the light of your happy countenance. We beg, secondly, to say that in the most happy and honourable time, we received your letter containing your beautiful discourse. We thanked, on reading it, the Almighty God that you are well, and ask him now, also (who is the most fit to ask), that we may be permitted to behold the light of your countenance in a fit and agreeable time.

"The animals which you have ordered will be brought down to you by the Excellency of our brother Chief, Muhammed Nûjally, and the Chief Abd' Allah en Nahas; and the men necessary to guard the boats will be supplied by the said Chiefs.

"The reason of our delay in coming to you was the weakness and fatigue of our horses. The time will be, God willing, short before we see you.

"This being all that is necessary, we beg you will offer our compliments (peace) to all those who inquire after us.—From this part, the Excellency of our respected brother, Sherîf, sends you his best compliments. May you be kept in peace.

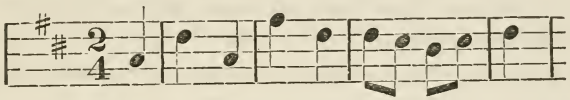
"⊙ Seal of 'Akîl Aga el Hassee.

"Kerak, 28 Jamad Awah."

The boats excited much attention; and, to gratify both the Christian and the Muslim Arabs, we launched one and pulled her a short distance out and back, some of the Arabs being on board; but Muhammed, although he had been the loudest in expressions of wonder and incredulity, declined to go with them; and I was disposed to think that he was a very coward after all. On returning from the beach, they stuck plugs of onions into their nostrils, to counteract the malaria they had imbibed from the sea. They call it "the sea accursed of God;" and, entertaining the most awful fears respecting it, looked upon us as madmen for remaining so long upon it.

During the forenoon, the thermometer ranged from 86° to 90°. At sunset, it stood at 83°, and quite pleasant. Sky filled with cumulus and stratus. A little after 8 P. M., we heard the song sung by the tribes when about to meet friends or enemies; in the first instance, a song of welcome; in the last, a war-cry of defiance. The wild coronach was borne upon the wind, long before the party singing it were in sight; but presently fourteen mounted Arabs, headed by the brother of Muhammed, came proudly into the camp. The camp consisted of two boats' awnings, stretched over stakes, to screen us from the sun and wind. All carried a long gun and a short carbine, the last slung over the shoulders,

except one Arab, a kinsman of the Sheikh, who bore a spear eighteen feet long, with a large, round tuft of ostrich feathers just below the spear-head. Reining up before us, they finished their song, prior to dismounting or exchanging salutations. The war-cry of the Arabs was the only true musical sound we heard among them, although they frequently beguiled the tedious hours of a march with what they termed a song. The following notes, by Mr. Bedlow, will give some idea of their war-cry.



These few notes are uttered in a high, shrill voice, and with a modulation or peculiarity bearing some affinity to the characteristic Yoddle of Tyrolean music. The distance at which this wild war-cry can be heard, is almost incredible.

After nightfall the wind sprang up fresh from the northward. We made a lee by stretching one of the boat's awnings across, and lying upon the beach with our heads towards it. For myself I could not sleep. The conduct of Muhammed, almost insulting, filled me with distrust. He had come down with about eight men, his brother with fourteen more, and by two and three at a time they had been dropping in ever since, until, at 9 P. M., there were upwards of forty around us; and, if disposed to treachery, there might be many more concealed within the thicket. It seemed as if Muhammed considered us as already in his power, and it occurred to me at times, that it was my duty, in order to save the lives for which I was responsible, to depart at once; but two considerations determined me not only to remain, but, at all hazards, go to Kerak. The second day after our arrival upon this sea, I had sent 'Akīl to the Arabian tribes to announce our coming, and to make arrangements with them to supply us with provisions. He had, through great peril, and at considerable loss, made his way along the whole eastern coast, and as directed, announced the coming of a party of Americans, people from another world, of whom they had

never heard before. I therefore felt that to retire now would be construed into flight, and the American name be ever after held in contempt by this people, and all who might hereafter sojourn among them. Moreover, to decline an invitation for which we had made overtures through 'Akīl, might hazard his safety. In addition to these considerations, I felt satisfied that if not invigorated by bracing air, even for one day, many of the party would inevitably succumb; and I preferred the risk of an encounter with the Arabs to certain sickness upon the sea, with its result, unaccomplished work.

Although the wind was high, too high to take observations of Polaris, the night was sultry; thermometer 81°, the dew so heavy as to filter through the awning and drop upon our faces. This is the second time we have experienced dew upon this sea, each time with a hot wind from the north. It probably betokens some atmospheric change. Then it was succeeded by a sirocco. We shall see what to-morrow will bring forth. This is our fifteenth night upon this sea. Towards morning the wind lulled, and the sky became clouded and the weather cool.

Tuesday, May 2. Cloudy. Called all hands at 4 A. M., and set off at 5.30, after a hurried and meagre breakfast. The sailors were mounted on most unpromising looking cradles, running lengthwise along the backs of their mules, while our horses were but little better caparisoned. At his earnest solicitation, I left behind Henry Loveland, seaman, who was apparently one of the least affected by the previous heat.[1] To him and our Bedawin friend Jum'ah, who had several Arabs with him, I gave strict charge of the boats and all our effects.

We were fourteen in number, besides the interpreter and cook. The first I believed courageous; the latter I knew to be a coward. Our escort consisted of twelve mounted Arabs and eight footmen, the rest having gone in advance.

We struck directly across the plain forming the base or root of the peninsula, towards the lofty ragged cliffs which overlook it

[1] This man eventually suffered more from sickness, and his life was longer in jeopardy, than any of the rest.

from the east, and passed many nŭbk and osher trees, and fields of dried stalks, some resembling those of the maize and others the sugar-cane. Crossing the stream which flows down the Wady Beni Hamad, and a number of patches of dhoura (millet), artificially irrigated, we passed close under a ruin on an elevated cliff, which overlooks the plain of Zoar. It seemed to be the remains of a fortalice not more ancient than the times of the Crusades. We would have given much to explore the plain and visit the ruin above, but circumstances forbade it. It was essential to inhale the mountain air as soon as possible, and equally important that we should keep together to guard against treachery. We resolved to make an exploration on our return, if satisfied that we could do so with safety.

We thus far passed in succession the loose tertiaries of the peninsula; some ferruginous and friable sandstone, a yellow and shaly limestone, clay-slate, and argillaceous marls.

From Wady Beni Hamad we skirted along the base of the cliffs for about two miles in a south direction, across the neck of the peninsula towards the S. E. inlet of the sea, and crossing the bed, turned up Wady Kerak, the steepest and most difficult path, with the wildest and grandest scenery we had ever beheld. On one side was a deep and yawning chasm, which made the head dizzy to look into; on the other beetling crags, blackened by the tempests of ages, in shape exactly resembling the waves of a mighty ocean, which at the moment of overleaping some lofty barrier, were suddenly changed to stone, retaining even in transformation, their dark and angry hue. In most places the naked rock dipped down abruptly into the deep and gloomy chasm, and it only required a torrent to come tumbling headlong over the rude fragments fallen from the cliffs above to complete the sublimity of the scene. Nor was it wanting.

When we first started, it was so cloudy that we congratulated ourselves upon the prospect of a cool and pleasant instead of a sultry ride. While passing under the ruin, it began to rain lightly but steadily. Before we had half ascended the pass, however, there came a shout of thunder from the dense cloud which had

gathered at the summit of the gorge, followed by a rain, compared to which, the gentle showers of our more favoured clime are as dew-drops to the overflowing cistern. Except the slight shower at the Pilgrim's Ford, this was the first since we landed in Syria. The black and threatening cloud soon enveloped the mountain-tops, the lightning playing across it in incessant flashes, while the loud thunder reverberated from side to side of the appalling chasm. Between the peals we soon heard a roaring and continuous sound. It was the torrent from the rain-cloud, sweeping in a long line of foam down the steep declivity, bearing along huge fragments of rocks, which, striking against each other, sounded like mimic thunder. In one spot, where the torrent made its maddest leap, a single palm-tree, bent by the blast, waved its branches wildly above the gorge, seeming to the imagination like the genius of the place bewailing the devastation of its favoured haunt. During the whole of this storm, our rugged path led along the face of a steep precipice looking into the dark grandeur of the chasm beneath. It was a wild, a terrific, but a glorious sight!

"It more stirs the blood
To rouse a lion than to start a hare;"

and I rejoiced to witness this elemental strife amid these lofty mountains. How much more exciting and sublime than anything a monotonous plain presents! I have skirted the base of Etna, clothed in the luxuriant verdure of a favoured clime, and looked upon its summit, wreathed in a mantle of perpetual snow, while the smoke from its crater gracefully curled above it. I have clambered the cone of Vesuvius by nightfall, and looked over its brink into the fiery cauldron beneath; and in a thunder-storm, I once launched a boat at the foot of Niagara, and rocking in the foam of its cataract, marked with delight the myriads of gems, of every hue and radiance, reflected in the misty vapour at each successive flash; but I never beheld a scene in sublimity equal to the present one.

A meandering river and a fertile plain, with their accompaniments, luxuriant foliage and fragrant odours, interspersed with

scenes of domestic peace, captivate the eye and delight the senses. But the boundless ocean or sky-piercing mountains are necessary to the grandeur of sublimity; to embody, as it were, to the mind, and enable it to realize the presence of a great Being — great in all things,—but seeming to us most potent when either the "live thunder" leaps from cliff to cliff, or "He rides upon the wings of the mighty wind" across the illimitable waste.

The storm gradually subsided; the cloud which had enveloped the mountain-tops and spread itself far down the chasm, gathered its misty folds and was swept by degrees over the crest towards the desert of Arabia;—to refresh, perchance, the arid plains from its yet copious store.

Bending a little from the ridge to the south, we passed a small stream, trickling down in a N. E. course towards the ravine. Like the torrent, the stream was doubtless the creation of the shower. The general impression that there is a perpetual stream down the Wady Kerak, is an erroneous one. The Kerakîyeh tell us that it has only water in the rainy season, and for a short period, at other times, after storms like the one which has just passed over. When we crossed the foot of the ravine, there was no water in it; but quite a considerable stream in the Wady Beni Hamad, whence the plain around Mezra'a is irrigated. Except the lone palm, we had not seen a tree or shrub since we turned up the side of the ravine; but all along our zigzag path, the wildest rocks, bare, black, and contorted, presented themselves in detached fragments, and in wonderous strata,—mountain-sides tumbled down, perpendicular crags, and deep chasms.

While we were passing along the edge of a sheer precipice, the weather partly cleared up, and gave us a terrific view down the ravine; it pained the eye to look into its dizzy depths.

At 9.45, stopped to rest at a small spring of pure water, which gushed out of a hill-side. The elements were not yet entirely hushed, the wind sweeping down the ravine in occasional gusts. Here the Kerakîyeh amused themselves by firing at a mark. Approaching to pistol-shot distance, and taking rest with their long guns, they rarely hit the object. Their powder was so in-

different, that one of our sailors contemptuously remarked that he could run a mile between the flash and the report. They were perfectly astonished at the execution of our rifle.

Starting again, the road led upon a wide terrace over the valley; and was almost blocked up by huge fragments, severed from the cliffs above, many of them, also, lying in every possible position in the valley beneath. Several of these blocks, and many places in the mountain-side, were hollowed out, sufficient in some places to shelter many persons. These old limestone-rocks are worn into caverns, arches, and the resemblance of houses; an isolated block was exactly like a thatched, moss-grown cottage. One of these may be the cave where Lot and his two daughters dwelt. About two-thirds up, we saw some of the retem, or broom plant,[1] many purple hollyhocks, and, shortly after, some oleanders. The last, which were in full bloom high up the Jordan, and in the plain below, were in this lofty region just beginning to bloom. We saw some partridges, hawks, and many doves; also much of the scarlet anemone, and a blue flower resembling the convolvulus.

The sides and bottom of the ravine at length betokened some slight cultivation; here and there was a small patch of wheat, and higher up there were a few olive-trees. Gradually these appearances became more frequent; the patches of wheat were larger, and the olive in occasional groves; sometimes, too, there was a fig-tree, its green more refreshing to the eye than the tawny hue of the olive. When we thought that we were upon the town, we found that we had yet a long, steep hill to clamber up. Here we came to a fork; the main bed of the ravine coming down from the east, and another, broad and steep, from the south-east, with the walled town of Kerak, upon the crown of the hill, overlooking both. We skirted the last ravine, leaving on the left a walled-in fountain and luxuriant olive-groves, and continued ascending, for half an hour; an extensive pile of ruins in sight at the S. W.

[1] This plant, elsewhere a bush, is here quite large; and it is supposed that it was under a retem, instead of a juniper-tree, that Isaiah took shelter in the desert.

extremity of the town, and a majestic quadrangular tower at the N. W. angle of its wall. Looking back, our cavalcade presented a singular sight, winding up the steep and sinuous path. After leaving the peninsula, and turning up the precipitous path along the Wady Kerak, we met with fossiliferous limestone, and the rock continued calcareous all the way to Kerak.

About an hour after noon, came upon the brow of the hill (3000 feet above the Dead Sea) at the north-east angle of the town. Instead of a richly cultivated country, there was before us a high, rolling plain, the grass withered, and the grain blighted by the sirocco and the locust. Turning to the north, we passed along the wall, then under the tower, built of flesh-coloured, consolidated limestone, and along the face of the western wall for about 150 yards, when, turning abruptly, we entered an arch cut through the rock, about thirty feet high and twelve wide. Over the gateway was a partly effaced Arabic inscription, recording the building, or repair, of the walls. The passage had two turns, and was about eighty feet long. From it, we emerged into the town,—a collection of stone huts, built without mortar. They are from seven to eight feet high; the ground-floors about six feet below, and the flat, mud-roofs mostly about two feet above, the streets; but in many places there were short cuts, from street to street, across the roofs of the houses. The people were assembled on the dirt-heaps and mud-roofs to see us pass. We were escorted to the council-house, which is also the Christian school-room, the same in which Irby and Mangles, the only Franks (who, as Franks), had preceded us since the Crusades, were lodged thirty years ago. Below, was a work-room, and ours was a room for all purposes. Opposite, was a Christian church under construction. Its walls, now about twelve feet high, measured seventy-four by forty feet, and there were pedestals laid for six pillars.

Our room had nothing whatever, except the bare stone floor beneath; the rafters supporting the mud roof above; two windows without glass or shutters, and a crazy door without a fastening. Assigning one side to the men, and taking the adjoining one for ourselves, we left the other two for the Arabs, who flocked

in crowds to look upon us. From some cause they did not furnish a sheep, although there were hundreds in the vicinity.

Through the exertions of the priest and Abd' Allah, the Christian Sheikh, we procured some eggs, and after a scanty breakfast and a hard ride made a meagre dinner.

Determined, at all hazards, to see the place, we went out by turns. We found but one shop, and the only articles for sale were thin cakes of dried and pressed apricots, and English muslin!

The houses, or rather huts, without windows and without chimneys, were blackened inside by smoke; and the women and children were squalid and filthy. Kerak contains a population of about 300 families, three-fourths Christian. By paying an annual tribute, and submitting to occasional exactions, the latter live amicably with the powerful tribe of Kerakîyeh, whose encampment is a short distance without the walls. The latter are so averse to houses, that some, then on a visit to the town, had pitched their tents in the yards of vacant dwellings.

The Muslim inhabitants are wild-looking savages, but the Christians have a milder expression. The males mostly wear sheepskin coats; the women, dark-coloured gowns; the Christian females did not conceal their faces, which were tattooed like the South-Sea islanders. The priest, in his black turban and subdued countenance, acted as our cicerone. He took us to his little church, a low, dark, vaulted room, containing a picture of St. George fighting the Dragon; two half columns of red granite from the ruins of the castle, and a well of cool water in the centre.

The castle, partly cut out of, and partly built upon, the mountain-top, presents the remains of a magnificent structure; its citadel cut off from the town by a ditch-ravine. It seems to be Saracenic, although in various parts it has both the pointed Gothic and the rounded Roman arch. A steep glacis-wall skirts the whole. The walls, now partly standing, are composed of heavy, well-cut stones; and there are seven arched store-houses one above the other, with narrow slits for defence. The part used as the chapel was evidently built in the times of the crusades; and the east end, where the altar stood, was least demolished; for these buildings

have been devastated by the hand of man. Maundrell has remarked that in all the ruined churches he saw, the part appropriated to the altar was ever in the best state of preservation;—which he is at a loss whether to ascribe to bribery on the part of the Christians, to a lingering reverence in the minds of the Turks, or to miraculous interposition. Against the walls were pilasters and parts of columns with sculptured ornaments, and upon the ceiling were traces of fresco painting, among them one of a female saint. In one place, the pavement had been dug up by the present Christian inhabitants of Kerak for paving-slabs for their new church. The vast extent of this magnificent castle filled us with astonishment. It has five gates and seven wells and cisterns, and the whole summit is perforated by subterranean passages. From the narrow embrasures of the vaulted chambers we looked down into the ravine, green with fields of grain and grass, and the shrubbery of oleanders, and upon part of the sea in the distance.

We also visited the structure at the N. W. angle, under which we had passed before entering the arched gateway of the town. It seemed, also, to be Saracenic, with the remains of a handsome cornice.

Returning, we passed through the burial-ground, each grave indicated by a double line of rude, unsculptured stones.

We procured here some of the wheat, which, it is said, retains the prolific quality ascribed to it in the Bible. We saw and heard nothing of the immense grapes, "like those brought back by the Hebrew spies," spoken of by Laborde. The harvests had been swept, the last seven years, by the locusts and the sirocco; the last occurring two or three times a month.

P. M., held a long conversation with 'Akīl as to the possibility of proceeding, by land, to Wady es Sâfieh, and its luxuriant delta, at the S. E. extremity of the sea. He thought it impracticable. He said that the southern tribes were in a great state of excitement, and were all coming up; while those along the coast were gathering together, and that a general outbreak might be expected;—the Beni 'Adwans and Beni Sŭkrs having already begun hostilities. He could assign no other reason for this than

that the grain would soon be gathered by the fellahin, and the Bedawin were preparing to sweep it off, each tribe from a district remote from its own.

In some respects 'Akīl was mysterious; and, at first, I could not comprehend the hints he threw out. His object seemed to be to ascertain whether, under any circumstances, we would aid an association of the tribes in an avowed object. I would not press him for an explanation, but merely told him that, if he had been captured and detained while coming round in our service, we would have felt it our duty to leave every thing else and hasten to his assistance; that I would endeavour to have him remunerated for what he had lost while acting for us; but we could take no part in their petty wars. I half suspected that this barbarian, the most winning and graceful one we had ever seen, generous, brave, and universally loved or feared, contemplated a union of the tribes for the purpose of throwing off the thraldom, here almost nominal, of the Turkish yoke, and establishing a sovereignty for himself. Exceedingly affable to all, he was more reserved and taciturn than his noisy countrymen, and was often absorbed in thought. Having once reaped profit from rebellion, he might then have been weighing the chances of a bolder speculation. He could not rely much on our party, but might hope that if we were involved our country would sustain us. He little knew how severely, and how justly, too, we should be censured at home if we became voluntarily embroiled either with the tribes or the Turkish government. If he had attempted a rebellion, he would have assuredly failed. The elements are too discordant. The antipathies between the highland Gael and the southron, of the Scottish border, were not more inveterate than the hostile feeling existing between many of the tribes. With some it is the feud of blood, transmitted from generation to generation with increasing rancour. Yet their God is gold, and fifty well-armed, resolute Franks, *with a large sum of money*, could revolutionize the whole country. The presence of 'Akīl was of great service to us; and but for him we should have come in collision with this rude people.

The Christians were as kind and obliging as the Muslims were insolent. In order, as he told me, to secure the good behaviour of the Kerakîyeh, 'Akîl brought with him the young prince of the Beni Sŭkrs, a powerful tribe, of whom even these fierce Arabs stood in awe. The Beni Sŭkr wore his hair in ringlets, like a girl; but we were told that he behaved gallantly in the fight.

To avoid another encounter with the Beni 'Adwans, on his return, 'Akîl purposed providing his small party with sufficient flour and water for five or six days' subsistence, and to strike into the desert, in a direct east course, for a ruined khan, on the Great Hadj, or pilgrim route from Damascus to Mecca. Thence he would proceed north, still keeping east of the Jordan, until he reached the vicinity of the Sea of Galilee.

It being absolutely impossible to ascend the Jordan with the boats, I gave 'Akîl a note for Mr. Weiseman, at Tiberias, directing the trucks, &c., we had left in his charge, to be sent to Acre.

Our trip here exhibited the Arab character in a new light. From the first, the manner of Muhammed had been imperious and insolent; and his father, whom he seemed to rule, had neither invited us to his tents nor contributed, in the slightest degree, to our comfort. The reason was because we did not make them a large present. According to the arrangement with 'Akîl, he was to pay for all that we might require; and I held to the course we had heretofore pursued, of making no presents, except for kindness or for services rendered. Muhammed, growling, said that he wanted cloaks, a double-barrelled gun, a watch, &c., that other Franks, coming up from Egypt, gave them.—Where did we come from, thus out of the sea? For the whole day the room had been crowded; the doorway, sometimes, blocked up. It seemed to be regarded by them in the light of a menagerie.

When, at length, they left us to ourselves, for the first time, in twenty-three days, we lay down beneath a roof, having first enjoyed the unwonted luxury of a draught of sweet milk. Placing a board against the door, that its fall might rouse us at an attempted entrance, we lay down with our arms in our hands, with a feeling of uncertainty as to what the morrow might bring forth;

for although 'Akīl was there, he had but four followers, one of them wounded; whereas the Kerakîyeh could muster 700 fighting men. Our belief was, that although the Christians might not dare to side with us, yet, so far from acting in combination against, they would give us timely warning. At all hazards, we wished to impress upon these people that we would do nothing which could be construed into the appearance, even, of purchasing forbearance. Were we private travellers, the case would be different; but the time has long past when, even through its meanest representative, our government will consent to pay for forbearance from any quarter.

In the course of a long conversation, to-night, Abd' Allah gave us a history of the condition and prospects of the Christians of Kerak. He said that there were from 900 to 1000 Christians here, comprising three-fourths of the population. They could muster a little over 200 fighting men; but are kept in subjection by the Muslim Arabs, living mostly in tents, without the town. He stated that they are, in every manner, imposed upon. If a Muslim comes to the town, instead of going to the house of another Muslim, he quarters himself upon a Christian, and appropriates the best of every thing: that Christian families have been two days at a time without food—all that they had being consumed by their self-invited guests. If a Muslim sheikh buys a horse for so many sheep, he makes the Christians contribute until the number be made up. Their property, he said, is seized at will, without there being any one to whom to appeal; and remonstrance, on their part, only makes it worse.

Already a great many have been driven away; poverty alone keeping the remainder. They have commenced building a church, in the hope of keeping all together, and as a safe place of refuge for their wives and children, in times of trouble; but the locusts and the sirocco have for the last seven years blasted the fields, and nearly all spared by them has been swept by the Muslims. They gave me the following appeal to the Christians in our more happy land, which I promised to make known. The following is a literal translation:—

"By God's favour!

"May it, God willing! reach America, and be presented to our Christian brothers,—whose happiness may the Almighty God preserve! Amen!

"8642. BEDUAH.

"We are, in Kerak, a few very poor Christians, and are building a church.

"We beg your excellency to help us in this undertaking, for we are very weak.

"The land has been unproductive, and visited by the locusts, for the last seven years.

"The church is delayed in not being accomplished, for want of funds, for we are a few Christians, surrounded by Muslims.

"This being all that is necessary to write to you, Christian brothers of America, we need say no more.

"The trustees in your bounty,

"ABD' ALLAH EN NAHAS, Sheikh,

"YÂKÔB EN NAHAS, Sheikh's brother.

"KERAK, Jâmad Awâh, 1264."

Wednesday, May 3. It was exceedingly cold last night, the north wind whistling through the casement with a familiar sound of home. We all concurred in the opinion, that for comfort, the sea-beach would have been a preferable couch, the fleas having tormented us through the night. Notwithstanding our disturbed slumbers, however, we did not feel as debilitated as heretofore on rising from sounder sleep. The exercise of riding and the variety of scenery through which we yesterday passed, were of service, and the air was much cooler and more invigorating than below.

We rose early, and breakfasted on eggs and rice. Shortly after, Muhammed came in, very surly; I refused to converse with him, but referred him to 'Akīl, whom I had commissioned to procure the horses and make the necessary purchases for us. We would have liked to remain another day for the benefit of the mountain air and to make some examination of the neighbour-

hood; but we were unanimously of opinion that it would be unsafe, the prospect of difficulty with this insolent people increasing with the lapse of every hour. While we made preparations for our departure in the room above, the Arabs were in consultation beneath the window, Muhammed and several of his tribe gesticulating violently. But 'Akīl and the Beni Sŭkr prince were there, and we knew that they would stand by us. After much difficulty, our horses were procured. As we were about starting, Muhammed again demanded a backshish, which was refused. He then said that he would not go down with us, and sneeringly asked what we should do if we found one hundred men in our path. We replied that we would take care of ourselves. I longed to seize him and carry him with us by force as a hostage, but he was surrounded by too many armed and scowling Arabs.

We started, soon after sunrise, in battle array, our carbines unslung, and everything ready for immediate use. The Christian Sheikh, the kind old man, although he made enemies by doing so, accompanied us, and three or four footmen journeyed along, without absolutely mingling with us. Muhammed, almost furious, remained behind.

I had noted the ground well the day before, and knew that there was no place above the plain where an attack could be advantageously made. My greatest fear, concurred in by the Christian Sheikh, was, that any one lagging behind would be cut off. Giving to Mr. Dale, therefore, who ably seconded me, the charge of the front, I kept with the rear. We had scarce left the town a mile, before Muhammed, black and surly, with some horsemen, overtook us. I was never more delighted in my life, for we had now the game in our own hands. Instantly detaching an officer and one of our most trusty men, I directed them to keep by him without regard to his companions, and to shoot him at the first sign of flight or treachery.

It was some time before Muhammed realized that he was a prisoner; but observing that whether he rode ahead or tarried behind, he had ever the same companions, and that if he stopped, the march was arrested, and the whole party stopped also, the

truth flashed upon him; and from being insolent and overbearing, he became first respectful and then submissive.

At 10.15, came in sight of the sea, its surface covered by a thin mist, the garment in which it is ever wreathed during the heat of the day. The weather became warmer and warmer as we descended,—the torrent bed of the ravine (Wady Kerak) perfectly dry.

As we approached the plain, I placed myself beside Muhammed to watch him more narrowly. By this time, all but two or three of his followers had ridden ahead and left us. When he first joined us he had demanded a watch, then a double-barrelled gun, and a number of articles in succession; but when he saw that we held him as a hostage for the good behaviour of his tribe, he changed his tone. About an hour before reaching the shore, we stopped fifteen minutes to breathe the horses. When we were about to remount, he had become so much humbled, that perceiving my saddle-girth loose, he hastened forward and drew it tight for me. In the morning he would have cut my throat rather than have performed a menial office.

At 1.30, issuing from the thicket upon the beach, we were gladdened with the sight of our boats, lying as secure as we had left them. We launched them and made preparations for immediate departure. At the instance of Abd' Allah, the Christian Sheikh, I wrote to 'Akīl by Friday, requesting him to protect the Christian Arabs against the Kerakîyeh; and in order to enlist the Beni Sŭkr Prince in the same cause, I sent him a richly ornamented āba.

Burckhardt, and Irby and Mangles, were kindly received in Kerak; but the first spoke the language, and came disguised as an Arab, and the two last had a letter of introduction to the Muslim Sheikh of Kerak, given to them by the Sheikh of Hebron, without which, they intimated that their reception would have been a cold one. They had to pay down four hundred piastres (equal to 1600 now), and on the second day of their journey, while yet under the protection of the Sheikh of Kerak, one hundred and fifty (equal to 600 piastres) more were exacted. From Burckhardt, who had assumed the garb of a poor man, all was

extorted that it was thought he could afford to pay. Seetzen was robbed by some of the tribe before he entered Kerak.

Everything being prepared, I had taken leave of Abd' Allah, after making him a present, and was about stepping into the boat without saying anything to Muhammed, when he sprang forward, and, taking my hand, begged for some gun-caps. But I refused; for had they been given, perhaps the first use made of them would have been against a Christian. Getting into the boat, therefore, we shoved off, and left him standing upon the shore. Thus far, these were the only Arabs from whom we had experienced rudeness.

CHAPTER XVI.

CRUISE ALONG THE ARABIAN SHORE.

With a light breeze from the south, we steered down the bay, along the coast, towards Wady Môjeb, the river Arnon of the Old Testament, upon which, Aroer, one of the principal cities of the Moabites, was situated. Eight miles north from it is a mountain, supposed to be Mount Nebo, from the summit of which Moses viewed the promised land, and in a cave under it, Josephus and Epiphanius state that the ark of the covenant, with the tabernacle and the altar of incense, were concealed by the prophet Jeremiah, shortly before the destruction of Jerusalem. The shore presented the barren aspect of lofty perpendicular cliffs of red sandstone, and here and there a ravine with patches of cane, indicating that water was, or had recently been, there.

The mountains of red sandstone were beautifully variegated with yellow and capped by high cliffs of white in the background. Near sunset, stopped for the night in a beautiful cove on the south side of the delta, through which, its own formation, the Arnon flows to the sea. The stream, now eighty-two feet wide and four deep, runs through a chasm ninety-seven feet wide, formed by

high perpendicular cliffs of red, brown, and yellow sandstone, mixed red and yellow on the southern side, and on the north, a soft, rich red,—all worn by the winter rains into the most fantastic forms, not unlike Egyptian architecture. It was difficult to realize that some were not the work of art.

The chasm runs up in a direct line for 150 yards, then turns, with a slow and graceful curve, to the south-east. In the deepest part, within the chasm, the river did not at that time exceed four feet in depth; but after passing through the delta, narrowing in its course, it is ten feet deep, but quite narrow at the mouth. We saw here tracks of camels, and marks of an Arab encampment. There must be some passage down the ravine, the sides of which seemed so precipitous. There were castor-beans, tamarisks, and canes, along the course of the stream from the chasm to the sea. Walked and waded up some distance, and found the passage of the same uniform width, turning every 150 or 200 yards gradually to the south-east. Observed a dead gazelle, and saw the tracks of gazelles and of wild beasts, but could only identify those of the tiger. The report of a gun, which we fired, reverberating like loud and long-continued peals of thunder, startled many birds. The highest summit of the inner cliffs, north of the chasm, were yellow limestone. Saw a large brown vulture, its beak strong with two denticulations. After bathing in the cool, refreshing stream, and supping on rice and tea, we spread our awnings upon the beach, and slept soundly under the bright stars. At midnight, thermometer 78°, wind N. W., and very cold. George Overstock, one of the seamen, had a chill. We feared that the fever which has heretofore attacked all who ventured upon this sea was about to make its appearance. It was to a city, "in the border of Arnon" to which Balak, King of the Moabites, came to meet Balaam. From the Arnon to the Jabbok, "which is the border of the children of Ammon," was the land given to the tribes of Reuben and Gad.

Thursday, May 4. A warm, but pleasant morning. Overstock better, but I feared the recurrence of his chill. Started early, after filling the water-breakers. As we were shoving off,

heard voices and two gun-shots in the cliffs above, but could see nothing. Sent Mr. Dale, in the Fanny Skinner, to sound across to Ain Tŭrabeh. Our course was northwardly, parallel with, and a short distance from, the Arabian shore, sketching the topography as we passed. It presented the same lofty, rugged, parched hills as heretofore. Passed a beautiful little stream, along the banks of which were twenty-nine date palm-trees, in groups of two or three,—a grateful relief to the monotonous and dreary hue of the mountains and the sea.

In half an hour we passed a stream which was visible, in a long white line, from the summit to the sea, into which it plunged, a tiny, but foaming cataract. Its whole course was fringed with shrubbery, and its brawling noise was distinctly heard.

At half-past 10, stopped to examine some huge, black boulders, lying confusedly upon the shore, which proved to be trap interspersed with tufa. The whole mountain, from base to summit, appeared one black mass of scoriæ and lava, the superposition of the layers giving them a singular appearance. In the rocky hollows of the shore were incrustations of salt, of which, as well as of the lava, we procured specimens.

Starting again,—the scenery was grand and wild; wherever there was a rivulet, lines of green cane and tamarisk, and an occasional date-palm-tree, marked its course: a fine breeze from the southward. Stopped for the night in a cove formed by the Zerka Main, the outlet of the hot springs of Callirohoe. The stream, twelve feet wide and ten inches deep, rushes, in a southerly direction, with great velocity, into the sea. Temperature of the stream, 95°. It was a little sulphureous to the taste. The stream has worn its bed through the rock, and flows between the perpendicular sides of the chasm, and through the delta, bending south, about two furlongs, to the sea. The banks of the stream, along the delta, are fringed with canes, tamarisks, and the castor-bean. The chasm is 122 feet wide at the mouth; and, for one mile up, as far as we traced it, does not lessen in width. There were a few date-palm-trees growing in it. The turns, about 200 yards apart, at first gently rounded, but subsequently

sharp and angular. There was a succession of rapids, and a cascade of four, and a perpendicular fall of five or six feet. A little above the rapid, trap shows over sandstone. The current was so strong that, while bathing, I could not, with my feet against a rock, keep from being carried down the stream; and, walking where it was but two feet deep, with difficulty, retained a foothold with my shoes off. There were many incrustations of lime, and some tufa. In the loneliest part of the chasm, nearly trod upon a sparrow before it flew away. Had this been a settled country, the wee thing would not have been ignorant that, in mere wantonness, man is its greatest enemy. Saw a white butterfly, some snipes and brown hawks, and gathered some heliotrope, which was scentless, and a beautiful purple flower, star-shaped, five petals, calix and seed-stalk a delicate yellow. Pulled up a species of willow by the roots, in the hope of preserving it.

Bathed first in the sea and afterwards in the stream; a most delicious transition from the dense, acrid water of the sea, which made our innumerable sores smart severely—to the soft, tepid and refreshing waters of Callirohoe. The water of the sea was very buoyant; and, with great difficulty, I kept my feet beneath the surface.

After half a cup of tea each, to which we were limited from scarcity of sugar, we slept upon the gravel until 2 A. M.

CHAPTER XVII.

FROM THE OUTLET OF THE HOT SPRINGS OF CALLIROHOE TO AIN TURÂBEH.

Friday, May 5. Rose at 2 A. M. Fresh wind from the north; air quite chilly, and the warmth of the fire agreeable. It was this contrast which made the heat of the day so very oppressive. Everything was still and quiet, except the wind, and the surf breaking upon the shore. I had purposed visiting the ruins of Machærus, upon this singular hot-water stream, and to have excavated one of the ancient tombs mentioned in the Itinerary of Irby and Mangles, the most unpretending, and one of the most accurate narratives I have ever read; but the increasing heat of the sun, and the lassitude of the party, warned me to lose no time.

At 2.45, A. M., called the cook to prepare our breakfast, after which we started to sound across to Ain Turâbeh, thus making a srtaight line to intersect the diagonal one of yesterday. Two furlongs from the land, the soundings were twenty-three fathoms (138 feet). The next cast, five minutes after, 174 (1044 feet), gradually deepening to 218 fathoms (1308 feet); the bottom, soft, brown mud, with rectangular crystals of salt. Two-thirds across, met the Fanny Skinner. Put Mr. Aulick, with Dr. Anderson, in her; also the cook, and some provisions, and directed them to complete the topography of the Arabian shore, and determine the position of the mouth of the Jordan; and, as they crossed over, to sound again in an indicated spot. Made a series of experiments with the self-registering thermometer, on our way, in the Fanny Mason, to Ain Turâbeh. At the depth of 174 fathoms (1044

feet), the temperature of the water was 62°; at the surface, immediately above it, 76°. There was an interruption to the gradual decrease of temperature, and at ten fathoms there was a stratum of cold water, the temperature, 59°. With that exception, the diminution was gradual. The increase of temperature below ten fathoms may, perhaps, be attributable to heat being evolved in the process of crystalization. Procured some of the water brought up from 195 fathoms, and preserved it in a bottle. The morning intensely hot, not a breath of air stirring, and a mist over the surface of the water, which looked stagnant and greasy.

At 10.30, we were greeted with the sight of the green fringe of Ain Turâbeh, dotted with our snow-white tents, in charge of the good old Sherîf. Sent two Arabs to meet Mr. Aulick, at the mouth of the Jordan. Sherîf had heard of the fight between 'Akîl and his friends with the Beni 'Adwans; we learned from him that several of the Beni Sûkrs had since died of their wounds, and that the whole tribe suffered severely.

Reconnoitred the pass over this place, to see if it would be practicable to carry up the level. It proved very steep and difficult, but those at 'Ain Feshkhah and Ain Jidy are yet more so; and, after consultation with Mr. Dale, determined to attempt the present one. Made arrangements for camels, to transport the boats across to the Mediterranean. The weather very warm.

Saturday, May 6. A warm but not oppressive morning; the same mist over the sea; the same wild and awful aspect of the overhanging cliffs. Commenced taking the copper boat apart, and to level up this difficult pass. To Mr. Dale, as fully competent, I assigned this task. With five men and an assistant, he laboured up six hundred feet, but with great difficulty.

At 9 A. M., thermometer, in the shade, 100°; the sky curtained with thin, misty clouds. At 11 A. M., Mr. Aulick returned, having completed the topography of the shore, and taken observations and bearings at the mouth of the Jordan. Dr. Anderson had collected many specimens in the geological department. The exploration of this sea was now complete. Sent Mr. Aulick out again, in the iron boat, to make experiments with the

self-registering thermometer, at various depths; the result the same as yesterday and the day previous, the coldest stratum being at ten fathoms. Light, flickering airs, and very sultry during the night.

Sunday, May 7. This day was given to rest. The weather during the morning was exceedingly sultry and oppressive, At 8.33, thermometer 106°. The clouds were motionless, the sea unruffled, the rugged faces of the rocks without a shadow, and the canes and tamarisks around the fountain drooped their heads towards the only element which could sustain them under the smiting heat. The Sherîf slept in his tent, the Arabs in various listless attitudes around him; and the mist of evaporation hung over the sea, almost hiding the opposite cliffs.

At 6 P. M., a hot hurricane, another sirocco, blew down the tents and broke the syphon barometer, our last remaining one. The wind shifted in currents from N. W. to S. E.; excessively hot. In two hours it had gradually subsided to a sultry calm. All suffered very much from languor, and prudence warned us to begone. The temperature of the night was pleasanter than that of the day, and we slept soundly the sleep of exhaustion.

Monday, May 8. A cloudy, sultry morning. At sunrise continued the levelling. At 8, the sun burst through his cloudy screen, and threatened an oppressive day. Constructed a large float, with a flag-staff fitted to it.

In the morning, a bird was heard singing in the thicket near the fountain, its notes resembling those of the nightingale of Italy. The bulbul, the nightingale of this region, is like our kingfisher, except that its plumage is brown and blue, and the bill a deep scarlet. We cannot say that we ever heard it sing; but at various places on the Jordan we heard a bird singing at night, and the Arabs said it was the bulbul.

The heat increased with the ascending sun, and at meridian the thermometer stood at 110° in the shade. The Sherîf's tent was dark and silent, and we were compelled to discontinue work. The surface of the sea was covered by an impenetrable mist, which concealed the two extremities and the eastern shore; and we had the prospect of a boundless ocean with an obscured horizon.

At 4 P. M., the levelling party returned, having levelled over the crest of the mountain and 300 feet on the desert of Judea. They had been compelled to discontinue work by the high wind. The tent I sent them was blown down, and they were forced to dine under the "shadow of a rock."

Tuesday, May 9. Awakened at early daylight by the Muslim call to prayer. A light wind from N. E. Sky obscured; a mist over the sea, but less dense than that of yesterday. Sent Mr. Dale with the interpreter to reconnoitre the route over the desert towards Jerusalem. Moored a large float, with the American ensign flying, in eighty fathoms water, abreast of Ain Ghuweir, at too long a distance from the shore to be disturbed by the Arabs. Sent George Overstock and Hugh Read, sick seamen, to the convent of Mar Saba.

Sent off the boats in sections to Bab el Hulil (Jaffa gate), Jerusalem. Tried the relative density of the water of this sea and of the Atlantic—the latter from 25° N. latitude and 52° W. longitude; distilled water being as 1. The water of the Atlantic was 1.02, and of this sea 1.13. The last dissolved $\frac{1}{11}$, the water of the Atlantic $\frac{1}{6}$, and distilled water $\frac{5}{17}$ of its weight of salt. The salt used was a little damp. On leaving the Jordan we carefully noted the draught of the boats. With the same loads they drew one inch less water when afloat upon this sea than in the river.[1]

The streams from the fountains of Turâbeh, Ain Jidy, and the salt spring near Muhariwat, were almost wholly absorbed in the plains, as well as those running down the ravines of Sudeir, Sêyâl, Mubŭghghik, and Humeir. Taking the mean depth, width, and velocity of its more constant tributaries, I had estimated the quantity of water which the Dead Sea was hourly receiving from them at the time of our visit, but the calculation is one so liable to error, that I withhold it. It is scarcely necessary to say, that the quantity varies with the season, being greater during the winter rains, and much less in the heat of summer.

[1] Since our return, some of the water of the Dead Sea has been subjected to a powerful microscope, and no animalculæ or vestige of animal matter could be detected.

At nightfall, Mr. Dale and the interpreter returned. Before retiring, we bathed in the Dead Sea, preparatory to spending our twenty-second and last night upon it. We have carefully sounded this sea, determined its geographical position, taken the exact topography of its shores, ascertained the temperature, width, depth, and velocity of its tributaries, collected specimens of every kind, and noted the winds, currents, changes of the weather, and all atmospheric phenomena. These, with a faithful narrative of events, will give a correct idea of this wondrous body of water, as it appeared to us.

From the summit of these cliffs, in a line a little north of west, about sixteen miles distant, is Hebron, a short distance from which Dr. Robinson found the dividing ridge between the Mediterranean and this sea. From Beni Na'im, the reputed tomb of Lot, upon that ridge, it is supposed that Abraham looked "toward *all* the land of the plain," and beheld the smoke, "as the smoke of a furnace." The inference from the Bible, that this entire chasm was a plain sunk and "*overwhelmed*" by the wrath of God, seems to be sustained by the extraordinary character of our soundings. The bottom of this sea consists of two submerged plains, an elevated and a depressed one; the former averaging *thirteen*, the latter about *thirteen hundred* feet below the surface. Through the northern, and largest and deepest one, in a line corresponding with the bed of the Jordan, is a ravine, which again seems to correspond with the Wady el Jeib, or ravine within a ravine, at the south end of the sea.

Between the Jabok and this sea, we unexpectedly found a sudden breakdown in the bed of the Jordan. If there be a similar break in the water-courses to the south of the sea, accompanied with like volcanic characters, there can scarce be a doubt that the whole Ghor has sunk from some extraordinary convulsion; preceded, most probably, by an eruption of fire, and a general conflagration of the bitumen which abounded in the plain. I shall ever regret that we were not authorized to explore the southern Ghor to the Red Sea.

All our observations have impressed me forcibly with the con-

viction that the mountains are older than the sea. Had their relative ages been the same at first, the torrents would have worn their beds in a gradual and correlative slope;—whereas, in the northern section, the part supposed to have been so deeply engulfed, although a soft, bituminous limestone prevails, the torrents plunge down several hundred feet; while on both sides of the southern portion, the ravines come down without abruptness, although the head of Wady Kerak is more than a thousand feet higher than the head of Wady Ghuweir. Most of the ravines, too, as reference to the map will show, have a southward inclination near their outlets, that of Zerka Main or Callirohoe especially, which, next to the Jordan, must pour down the greatest volume of water in the rainy season. But even if they had not that deflection, the argument which has been based on this supposition would be untenable; for tributaries, like all other streams, seek the greatest declivities without regard to angular inclination. The Yermak flows into the Jordan at a right angle, and the Jabok with an acute one to its descending course.

There are many other things tending to the same conclusion, among them the isolation of the mountain of Usdum; its difference of contour and of range, and its consisting entirely of a volcanic product.

But it is for the learned to comment on the facts we have laboriously collected. Upon ourselves, the result is a decided one. We entered upon this sea, with conflicting opinions. One of the party was skeptical, and another, I think, a professed unbeliever of the Mosaic account. After twenty-two days' close investigation, if I am not mistaken, we are unanimous in the conviction of the truth of the Scriptural account of the destruction of the cities of the plain. I record with diffidence the conclusions we have reached, simply as a protest against the shallow deductions of *would-be* unbelievers.

At midnight the scene was the same as at Ain el Feshkhah, the first night of our arrival, except that the ground was more firm and the weather warmer; but the sea presented a similar unnatural aspect. There was also a new feature betokening a coming

change; there were camels lying around, which had been brought in, preparatory to to-morrow's movement. Heretofore, I had always seen this animal reposing upon its knees, but on this occasion all not chewing the cud were lying down. The night passed away quietly, and a light wind springing up from the north, even the most anxious were at length lulled to sleep by the rippling waves, as they brattled upon the shore.

CHAPTER XVIII.

FROM THE DEAD SEA TO THE CONVENT OF MAR SABA.

Wednesday, May 10. At 7 A. M., the levelling party started. Made preparations for finally breaking up the camp on the Dead Sea.

At 9.30, struck tents, and at 10, started, and ascended the pass of Ain Turâbeh. With us were Sherîf, Ibrahim Aga, and the sheikhs of the Raschâyideh and Ta'âmirah, and six camels. Winding slowly up the steep pass, we looked back at every turn upon our last place of encampment, and upon the silent sea. We are ever sad on parting with things for the last time. The feeling that we are never to see them again, makes us painfully sensible of our own mortality.

At 12, overtook the levelling party, and shortly after the camels with the sections of the boats. Camped for the night in Wady Khiyam Seyâ'rah (Ravine of the Tents of Seyâ'rah), so called from a tribe of that name having been surprised and murdered here. It is a rocky glen, over a steep precipice, a thousand feet above the Dead Sea. There are two large caves on the north side of the ravine, in which we prepared to take up our quarters, but the Arabs dissuaded us with the assurance that they

abound with serpents and scorpions, which crawl out in the night.

Our camp was, properly speaking, in a depression of the extremity of the ridge between the ravines Ghuweir and En Nar.

At night, we invited Sherîf to our tent, and prevailed on him to tell his history. His father was Sherîf, or hereditary governor of Mecca, to which dignity, at his death, the eldest brother of our friend succeeded. When Mecca surrendered to Mehemet Ali, his brother was deposed; and a cousin, inimical to them, was appointed in his stead. The deposed Sherîf fled to Constantinople; our friend was carried captive to Cairo, where he was detained ten years a prisoner, but provided with a house, and an allowance of 3000 piastres (125 dollars) per month for his support. When Arabia was overrun by the Wahabees, Mehemet Ali, wisely counting on sectarian animosity, gave our Sherîf a command, and sent him to the war. His person bears many marks of wounds he received in various actions. When Mehemet Ali was compelled by the quintuple alliance to abandon his conquests, our Sherîf went to Egypt to claim his pay, and reimbursements for advances he had made. Put off with vague promises, he proceeded to Stambohl (Constantinople) to sue for redress, and having laid his application before the divan, was now awaiting the decision. His account of himself is sustained by the information we received from our Vice-Consul and Mr. Fingie, H. B. M. Vice-Consul at Acre, respecting him. He is intelligent and much reverenced, and, in consequence, very influential among the tribes. To him and to 'Akīl, coupled with our own vigilance, we may in a great measure ascribe our not having encountered difficulty with the Arabs. He was to leave us the next day, and would carry with him our respect and fervent good wishes. We often remarked among ourselves, what should we have done without Sherîf and 'Akīl; we have not the slightest doubt that their presence prevented bloodshed.

A monk from the Convent of Mar Saba came in this evening, and brought word that our sick sailors were doing well. There seemed to be a good understanding between these religious and

the various tribes; at night, an Arab shared his āba with the monk, and the shaven-crown of the Christian and the scalp-lock of the Muslim were covered by the same garment.

In a few hours we had materially changed our climate, and in this elevated region the air was quite cool. We slept uncomfortably, drawing our cloaks yet closer as the night advanced. At 4 A. M., thermometer 60°; absolutely cold.

We were in a most dreary country; calcined hills and barren valleys, furrowed by torrent beds, all without a tree or shrub, or sign of vegetation. The stillness of death reigned on one side; the sea of death, calm and curtained in mist, lay upon the other; and yet this is the most interesting country in the world. This is the wilderness of Judea; near this, God conversed with Abraham; and here, came John the Baptist, preaching the glad tidings of salvation. These verdureless hills and arid valleys have echoed the words of the Great Precursor; and at the head of the next ravine lies Bethlehem, the birth-place of the meek Redeemer,—in full sight of the Holy City, the theatre of the most wondrous events recorded on the page of history,—where that self-sacrifice was offered, which became thenceforth the seal of a perpetual covenant between God and man!

Thursday, May 11. There is, perhaps, no greater trial to the constitution than sudden changes of atmospheric temperature. We were so enfeebled by the heat we had experienced in the chasm beneath us, that, at the temperature of 60°, the air here felt piercingly cold. We shivered through the night; and so busy were the sentinels in searching for dried thistles and shrubs, to feed the watch-fires, that, perhaps, in all our wanderings, the guard had never been so remiss.

We began, early, to prepare for work, and sent off three camel-loads of specimens, &c., to Jerusalem. Settled and parted with the good Sherîf.

Breakfasted in the rocky glen, with our backs towards the barren hills of the Desert of Judea; while the rays of the sun, rising over the mountains of Moab, were reflected from the glassy surface of the desolate sea before us.

We levelled, to-day, over parched valleys, and sterile ridges, to the flattened summit of an elevation, at the base of which three ravines meet, called the "Meeting of the Tribes,"—the Dead Sea concealed by an intervening ridge. We were fully 2000 feet above it, and the wind was fierce and cutting. Strolling from the camp, soon after we had pitched the tents, I felt so cold as to be compelled to return. The thermometer, at the opening of the tent, stood at 69°; but 7° below summer-heat. This place derives its name from a gathering of the tribes, or council, once held here. We saw, to-day, a light-brown fox, with a white tail.

Friday, May 12. The morning and the evening cool; the mid-day warm. Levelled into and up the Wady en Nar (Ravine of Fire) to the Greek Convent of Mar Saba. The ravine was shut in, on each side, by high, barren cliffs of chalky limestone, which, while they excluded the air, threw their reverberated heat upon us, and thus made the day's work an uncomfortable one. There was an association connected with the scene, however, which sustained us under the blinding light and oppressive heat of noon. The dry torrent-bed, interrupted by boulders, and covered with fragments of stone, is the channel of the brook Kidron, which, in its season, flows by the walls of the Holy City.

The approach to the convent is striking, from the lofty, perpendicular cliffs on each side, perforated with a great many natural and artificial excavations. Immense labour, sustained by a fervent though mistaken zeal, must have been expended here.

A perpendicular cliff, of about 400 feet, has its face covered with walls, terraces, chapels, and churches, constructed of solid masonry, all now in perfect repair. The walls of this convent, with a semicircular-concave sweep, run along the western bank of the ravine, from the bottom to the summit. The buildings form detached parts, constructed at different periods.

Coming up from the ravine, we descended an inclined wady, and camped outside of the western gate of the convent, under a broad ledge of rock, forming the head of a lateral ravine, running into the main one. A narrow platform was before us, with a

sheer descent from its edge to the bottom of the small ravine, which bore a few scattering fig-trees. We were earnestly invited to take up our quarters inside; but, dreading the fleas, we preferred the open air. There was a lofty look-out tower on the hill above us, to the south.

At the foot of a slight descent, about pistol-shot distance, was a low door, through which we were admitted to visit the convent. By the meagre monk who let us in, we were conducted through a long passage, and down two flights of stairs, into a court paved with flags; on the right centre of which stood a small, round chapel, containing the tomb of St. Saba. On the opposite side was the church, gorgeously gilded and adorned with panel and fresco paintings; the former enshrined in silver, and some of them good; the latter mere daubs. The pavement was smooth, variegated marble; there were two clocks, near the altar; and two large, rich, golden chandeliers, and many ostrich-eggs, suspended from the ceiling.

From the court we were led along a terraced walk, parallel with the ravine, with some pomegranate-trees and a small garden-patch on each side; and, ascending a few steps, turned shortly to the left, and were ushered into the parlour, immediately over the chasm. The adjoining room was occupied by our two sick men, of whom admirable care had been taken, and we rejoiced to find that they were convalescent. The parlour was about sixteen by twenty-four feet, almost entirely carpeted, with a slightly-elevated divan on two sides. The stinted pomegranate-trees and the few peppers growing in the mimic garden were refreshing to the eye; and, after a lapse of thirty-two days, we enjoyed the luxury of sitting upon chairs.

In times of scarcity, the Arabs throng here for food, which is given to them gratuitously; and to this, doubtless, is attributable the popularity of the inmates of the convent with the wandering tribes. The monks live solely upon a vegetable diet. There are about thirty in the convent, including lay-brothers, and, except a few from Russia, they are all Greeks. They are good-natured, illiterate, and credulous.

The interior of the convent is far more extensive than one would suppose, looking upon it from the western side, whence only the tower, the top of the church, and a part of the walls, are visible.

There is egress from the convent to the ravine by means of a ladder, which, at will, is let down from a low, arched door. The sight, from the bottom of the ravine, is one well calculated to inspire awe. The chasm is here about 600 feet wide and 400 deep,—a broad, deep gorge, or fissure, between lofty mountains, the steep and barren sides of which are furrowed by the winter rains. There are many excavations in the face of the cliffs, on both sides of the ravine, below the convent. They present a most singular appearance; and, looking upon them, one expects every moment to see the inmates come forth. It is a city of caverns.

We walked some distance up the bed of the Kidron, and encountered several precipices from ten to twelve feet high, down which cataracts plunge in winter. It will be difficult, but not impracticable, to level this torrent bed. Collected some fossils, and a few flowers, for preservation. Even at this early season, the scanty vegetation, scattered here and there in the ravines of the desert of Judea, was already parched and withered. There were but few flowers within this ravine; the scarlet anemone and the purple blossom of the thistle being the prevailing ones. We gathered one, however, which was star-shaped; the leaves white near the stem, but blue above, and the seed-stalks yellow, with white heads. A few leaves nearest the flower were green, but the rest, with the stalk, were parched and dry. It was inodorous, and, like beauty without virtue, fair and attractive to the eye, but crumbling from rottenness in the hand of him who admiringly plucks it. In this ravine, from the Dead Sea to the borders of cultivation, we have, besides, gathered for our herbarium, the blue weed, so well known in Maryland and Virginia for its destructive qualities; the white henbane; the dyer's weed, used in Europe for dyeing green and yellow; the dwarf mallow, commonly called cresses, and the caper plant, the unopened flower-buds of which, preserved in vinegar, are so much used as a condiment. It is supposed that the last named plant is the hyssop of Scripture.

During the night, we had a severe thunder storm, with a slight shower of rain. One of the camels, in its fright, fell into the ravine before the caverns where we slept, and kept us long awake with its discordant cries. The animal was unhurt; but the Arabs tortured it, by their fruitless endeavours to extricate it in the dark. They were alike deaf to advice, entreaties, and commands, until one of the sentries was ordered to charge upon them, when they hurriedly dispersed, and the poor camel and ourselves were left in peace.

Saturday, May 13. Calm and cloudy. Deferred levelling any farther, until we had reconnoitred the two routes to Jerusalem. The one up the ravine, although presenting great difficulties, proved more practicable than the route we had come. Let all hands rest until Monday. Extricated the camel from the ravine.

Sunday, May 14. A quiet day—wind east; weather pleasant. Collected some fossils, and a few flowers, for preservation. While here, several of the bteddin, or coney of Scripture, were seen among the rocks.

CHAPTER XIX.

FROM MAR SABA TO JERUSALEM.

Monday, May 15. Discharged all the Arabs, except a guide and the necessary camel-drivers. The levelling party worked up the bed of the Kidron, while the camp proceeded along the edge of the western cliff. In about two hours, we passed a large cistern, hewn in the rock, twenty feet long, twelve wide, and eighteen high. There was water in it to the depth of four feet, and its surface was coated with green slime. In it two Arabs were bathing. Nevertheless, our beasts and ourselves were compelled to drink it. Soon after, isolated tufts of scant and parched vegetation began to appear on the hill-sides. We were truly in a

desert. There was no difference of hue between the dry torrent-bed and the sides and summits of the mountains. From the Great Sea, which washes the sandy plain on the west, to that bitter sea on the east, which bears no living thing within it, all was dreary desolation! The very birds and animals, as on the shores of the Dead Sea, were of the same dull-brown colour,—the colour of ashes. How literally is the prophecy of Joel fulfilled! "That which the palmer-worm hath left, hath the locust eaten; and that which the locust hath left, hath the canker-worm eaten; and that which the canker-worm hath left, hath the caterpillar eaten. The field is wasted, the land mourneth, and joy is withered from the sons of men."

How different the appearance of the mountain districts of our own land at this season! There, hills and plains, as graceful in their sweep as the arrested billows of a mighty ocean, are before and around the delighted traveller. Diversified in scenery, luxuriant of foliage, and like virgin ore, crumbling from their own richness, they teem with their abundant products. The lowing herds, the bleating flocks, the choral songsters of the grove, gratify and delight the ear; the clustering fruit blossoms, the waving corn, the grain slow bending to the breeze, proclaim an early and redundant harvest. More boundless than the view, that glorious land is uninterrupted in its sweep until the one extreme is locked in the fast embrace of thick-ribbed ice, and the other is washed by the phosphorescent ripple of the tropic; while, on either side, is heard the murmuring surge of a wide-spread and magnificent ocean. Who can look upon that land and not thank God that his lot is cast within it? And yet *this* country, scathed by the wrath of an offended Deity, teems with associations of the most thrilling events recorded in the book of time. The patriot may glory in the one,—the Christian of every clime must weep, but, even in weeping, hope for the other.

Soon after leaving the cistern, or pool, we passed an Arab burial-ground, the graves indicated by a double line of rude stones, as at Kerak; excepting one of a Skeikh, over which was a plastered tomb. Before it our Arab guide stopped, and, bowing his head, recited a short prayer.

As we thence advanced, pursuing a north-westerly course, signs of cultivation began to exhibit themselves. On each side of us were magnificent rounded and sharp-crested hills; and, on the top of one, we soon after saw the black tents of an Arab encampment; some camels and goats browsing along the sides; and, upon the very summit, the figures of some fellahas (Arab peasant women) cut sharp against the sky.

A little farther on, we came to a small patch of tobacco, in a narrow ravine, the cotyledons just appearing; and, in the shadow of a rock, a fellah was seated, with his long gun, to guard it. Half a mile farther, we met an Arab, a genuine Bedawy, wearing a sheepskin āba, the fur inwards, and driving before him a she-camel, with its foal. A little after, still following the bed of the Kidron, we came to the fork of the pilgrim's road, which turns to the north, at the foot of a high hill, on the summit of which was a large encampment of the tribe Subeih. Leaving the pilgrim's road on the right, we skirted the southern base of the hill, with patches of wheat and barley covering the surface of the narrow valley;—the wheat just heading, and the fields of barley literally "white for the harvest." Standing by the roadside, was a fellaha, with a child in her arms, who courteously saluted us. She did not appear to be more than sixteen.

The valley was here about two hundred yards wide; and to our eyes, so long unused to the sight of vegetation, presented a beautiful appearance. The people of the village collected in crowds to look upon us as we passed far beneath them. Some of them came down and declared that they would not permit the 'Abeidîyeh (of which tribe were our camel-drivers) to pass through their territory; and claimed for themselves the privilege of furnishing camels. We paid no attention to them, but camped on the west side of the hill, where the valley sweeps to the north.

Tuesday, May 16. Weather clear, cool, and delightful. At daylight, recommenced levelling. Soon after, the Sheikh of the village above us, with fifteen or twenty followers, armed with long guns, came down and demanded money for passing through his territory. Finding his efforts at intimidation unsuccessful, he

presented us with a sheep, which he refused to sell, but gave it, he said, as a backshish. Knowing that a return was expected, I directed the fair value of the sheep, in money, to be given.

It was a pastoral sight, when we broke up camp, this morning. The sun was just rising over the eastern hills; and, in every direction, we heard shepherds calling to each other from height to height, their voices mingling with the bleating of sheep and goats, and the lowing of numerous cattle. Reapers were harvesting in every field; around the threshing-floors the oxen, three abreast, were treading out the grain; and women were passing to and fro, bearing huge bundles of grain in the straw, or pitchers of leban (sour milk), upon their heads. Every available part of this valley is cultivated. The mode of harvesting is primitive. The reaping-hook alone is used; the cradle seemed to be unknown. The scene reminded one forcibly of the fields of Boaz, and Ruth the gleaner. But, with all its peaceful aspect, there was a feature of insecurity. Along the bases of the hills, from time to time, shifting their positions, to keep within the shade, were several armed fellahin, guarding the reapers and the grain. The remark of Volney yet holds true: — "the countryman must sow with his musket in his hand, and no more is sown than is necessary for subsistence."

Towards noon, it became very warm, and we were thirsty. Meeting an old Arab woman, we despatched her to the Subeih for some leban. We noticed that 'Awad, our Ta'âmirah guide, was exceedingly polite to her. But when she returned, accompanied by her daughter, a young and pretty fellaha, he became sad, and scarce said a word while they remained. On being asked the reason of his sudden sadness, he confessed that he had once spent twelve months with that tribe, sleeping, according to the custom of Arab courtship, every night outside of the young girl's tent, in the hope of winning her for his wife. He said that they were mutually attached, but that the mother was opposed to him, and the father demanded 4000 piastres, about 170 dollars. 'Awad had 2000 piastres, the earnings of his whole life, and in the hope of buying her (for such is the true name of an Arab mar-

riage), he determined to sell his horse, which he valued at 1000 piastres, or a little over forty dollars. But, unfortunately, his horse died, which reduced him to despair. Shortly after, the girl's uncle claimed her for his son, then five years old, offering to give his daughter to her brother. According to an immemorial custom of the Arabs, such a claim took precedence of all others, and the beautiful girl, just ripening into womanhood, was betrothed to the child. With the philosophy of his race, however, 'Awad subsequently consoled himself with a wife; but, true to his first love, never sees its object without violent emotion.

He further told us, that in the same camp there was another girl far more beautiful than the one we had seen, for whom her father asked 6000 piastres, a little more than 250 dollars. The one we saw was lightly and symmetrically formed, and exceedingly graceful in her movements. The tawny complexion, the cheek-bones somewhat prominent, the coarse black hair, and the dark, lascivious eye, reminded us of a female Indian of our border.

Leaving the fellahin busy in their fields, and still following the ravine, we came to a narrow ridge, immediately on the other side of which were some thirty or forty black tents. Here a stain upon the rocks told a tale of blood.

An Arab widower ran off with a married woman from the encampment before us,—a most unusual crime among this people. In little more than a month, the unhappy woman died. Knowing that by the laws of the tribes he could be put to death by the injured man, or any of his or the woman's relatives he might encounter, and that they were on the watch for him; and yet anxious to return, he made overtures for a settlement. After much negotiation, the feud was reconciled on condition that he gave his daughter, 400 piastres, a camel, and some sheep to the injured man. A feast was accordingly given, and the parties embraced in seeming amity. But the son-in-law brooded over his wrong, and one day seeing the seducer of his former wife approaching, concealed himself in a cavity of the rock and deliberately shot him as he passed. Such is the Arab law of vengeance, in cases of a flagrant breach of faith like this, that all of

both tribes, 'Awad told us, are now bound to put the murderer to death.

This elopement is not an isolated circumstance, although a most unusual one. The only wonder is that with such a licentious race as the Arabs, the marriage contract, wherein the woman has no choice, is not more frequently violated.

Soon after noon, we passed the last encampment of black tents, and turning aside from the line of march, I rode to the summit of a hill on the left, and beheld the Holy City, on its elevated site at the head of the ravine. With an interest never felt before, I gazed upon the hallowed spot of our redemption. Forgetting myself and all around me, I saw, in vivid fancy, the route traversed eighteen centuries before by the Man of Sorrows. Men may say what they please, but there are moments when the soul, casting aside the artificial trammels of the world, will assert its claim to a celestial origin, and regardless of time and place, of sneers and sarcasms, pay its tribute at the shrine of faith, and weep for the sufferings of its founder.

I scarce realized my position. Could it be, that with my companions I had been permitted to explore that wondrous sea, which an angry God threw as a mantle over the cities he had condemned, and of which it had been heretofore predicted that no one could traverse it and live? It was so, for there, far below, through the descending vista, lay the sombre sea. Before me, on its lofty hill, four thousand feet above that sea, was the queenly city. I cannot coincide with most travellers in decrying its position. From that view, it seemed, in isolated grandeur, to be in admirable keeping with the sublimity of its associations. A lofty mountain, sloping to the south, and precipitous on the east and west, has a yawning natural fosse on those three sides, worn by the torrents of ages. The deep vale of the son of Hinnom; the profound chasm of the valley of Jehoshaphat, unite at the south-east angle of the base to form the Wady en Nar, the ravine of fire, down which, in the rainy season, the Kidron precipitates its swollen flood into the sea below.

Mellowed by time, and yet further softened by the intervening

distance, the massive walls, with their towers and bastions, looked beautiful yet imposing in the golden sunlight; and above them, the only thing within their compass visible from that point, rose the glittering dome of the mosque of Omar, crowning Mount Moriah, on the site of the Holy Temple. On the other side of the chasm, commanding the city and the surrounding hills, is the Mount of Olives, its slopes darkened with the foliage of olive-trees, and on its very summit the former Church of the Ascension, now converted into a mosque.

Many writers have undertaken to describe the first sight of Jerusalem; but all that I have read conveys but a faint idea of the reality. There is a gloomy grandeur in the scene which language cannot paint. My feeble pen is wholly unworthy of the effort. With fervent emotions I have made the attempt, but congealed in the process of transmission, the most glowing thoughts are turned to icicles.

The ravine widened as we approached Jerusalem; fields of yellow grain, orchards of olives and figs, and some apricot-trees, covered all the land in sight capable of cultivation; but not a tree, nor a bush, on the barren hill-sides. The young figs, from the size of a currant to a plum, were shooting from the extremities of the branches, while the leaf-buds were just bursting. Indeed, the fruit of the fig appears before the leaves are formed, and thus, when our Saviour saw a fig-tree in leaf, he had, humanly speaking, reason to expect to find fruit upon it.

Although the mountain-sides are barren, there are vestiges of terraces on nearly all of them. On the slope of one there are twenty-four, which accounts for the redundant population this country once supported.

Ascending the valley, which, at every step, presented more and more an increasing luxuriance of vegetation, the dark hue of the olive, with its dull, white blossoms, relieved by the light, rich green of the apricot and the fig, and an occasional pomegranate, thickly studded with its scarlet flowers, we came to En Rogel, the Well of Job, or of Nehemiah (where the fire of the altar was recovered), with cool, delicious water, 118 feet deep, and a small, arched, stone building over it.

On our right, was the Mount of Offence, where Solomon worshipped Ashtaroth: before us, in the rising slope of the valley of Jehoshaphat, had been the Kings' gardens in the palmy days of Jerusalem: a little above, and farther to the west, were the pool of Siloam and the fountain of the Virgin: on the opposite side of the chasm was the village of Siloam, where, it is said, Solomon kept his strange wives; and, below it, the great Jewish burial-ground, tessellated with the flat surfaces of grave-stones; and, near by, the tombs of Absalom, Zacharias, and Jehoshaphat; and, above and beyond, and more dear in its associations than all, the garden of Gethsemane.

We here turned to the left, up the valley of the son of Hinnom, where Saul was anointed King; and, passing a tree on the right, which, according to tradition, indicates the spot where Isaiah was sawn asunder; and by a cave in which it is asserted that the Apostles concealed themselves when they forsook their Master; and under the Aceldama, bought with the price of blood; and near the pool in the garden of Urias, where, from his palace, the King saw Bathsheba bathing; we levelled slowly along the skirts of Mount Zion, near the summit of which towered a mosque, above the tomb of David.

It was up Mount Zion that Abraham, steadfast in faith, led the wondering Isaac, the type of a future sacrifice.

Centuries after, a more august and a self-devoted victim, laden with the instrument of his torture, toiled along the same acclivity; but there was then no miraculous interposition; and He who felt for the anguish of a human parent, spared not Himself.

From this valley Mount Zion rises high and precipitous; and, isolated as the hill was under the Jebusites, might well justify their scornful message when summoned by David to surrender.

Following the curve of the vale of Hinnom, the Gehenna of the Old Testament, which rounds gradually to the north, with the Hill of Evil Counsel[1] on our left, we proceeded to the lower

[1] So called, from the tradition that on it Caiaphas dwelt when he counselled with the Jews.

pool of Gihon, where, at 5 P. M., we were compelled to halt, in consequence of the high wind agitating the spirit-level.

We pitched our tents upon a terrace, just above where the aqueduct crosses from Solomon's pool, with Zion gate immediately over us, and, a quarter of a mile below the tower of Hippacus and the Jaffa gate. In a line with us, above the Jaffa gate, was the upper pool of Gihon, with a number of Turkish tombs near it. On the opposite, or western side of the ravine, were old, gray, barren cliffs, with excavated tombs and caverns. The lower pool, beneath the camp, is formed by two huge, thick walls across the chasm. The aqueduct is led along the upper edge of the lower one; and the surface of the wall serves as a bridge, over which passes the road to Bethlehem,—the one traversed by our Saviour, on his first visit to Jerusalem.

There was little evidence of curiosity respecting us or the labour in which we were engaged. Our interpreter once or twice heard the remark, "the Franks are preparing to take possession of the Holy City."

The localities around us were so interesting, every spot teeming with recollections of the past, that the night was far advanced before we slept. The stars shone forth lustrous, yet serene; and the fleecy cloud drifted slowly along the sky; and the glittering dew settled upon the bending blade, which, while it bent, it fertilized. The luxuriant valleys, the lofty mountains, and the jewelled sky, proclaimed the existence of a Being as merciful as He is potent; while the crumbling terraces, the desecrated tombs, and the fast-bound gates of the silent city, beyond which, after night-fall, none can venture in security, told of the devastating hand, and the cruel and rapacious nature of man.

The dew was heavy, and we suffered from the cold, although the thermometer did not range below 52° in the night. The grain, already cut, laid in heaps in the valley below, exposed to the depredation of the spoiler, for none dared remain to guard it. Of all that solitude, we were the only tenants.

CHAPTER XX.

JERUSALEM.

Wednesday, May 17. At 4 A. M. this morning, the thermometer stood at 53°. In our present condition, the air felt as keen at this temperature as formerly at home, when the sky was clouded, and there was snow upon the ground.

We ran the level up the road, and beyond the Jaffa gate, to the highest near peak, north-west of Jerusalem. There were many Jewish women and children, clothed all in white, under the olive-trees in the valley as we passed. They were families from the city, who thus came to spend the day beneath the shade, away from the stifling air of the Jewish quarter.

Passing a large tomb which stands conspicuous to the north, we camped a little off the Jaffa road, beside an olive-tree, about a mile and a half distant from the city; and as far south-west from the reputed place where the Empress Helena was buried, and immediately west of the site most probably occupied by the besieging camp of the Roman army under Titus. There were many fields of grain around us, occasionally separated by low walls of uncut and uncemented stone. There were few trees, and the mountains, from their summits two-thirds down, were masses of brown rock without soil and unrelieved by verdure. South-west from us, about a mile distant, was a large building, its towers just visible over an intervening ridge. It was the Greek convent of the Holy Cross, where, we were told, "is the earth that nourished the root, that bore the tree, that yielded the timber, that made the cross." A most irreverent play upon words connected with such a theme, for it reminds one forcibly of the nursery tale of the "house that Jack built."

It is from this quarter that the appearance of Jerusalem has

been usually described. Looking hence upon the city, but little above a level, it is certainly less grand and imposing than from the gorge of the valley to the south-east, where it towers majestically above the spectator. Yet, beheld even from this point, there is no other city in the world which can compare with it in position. It does not, like other cities, present an indefinite mass of buildings, which must be viewed in detail before the eye can be gratified; but, with only its dome-roofs swelling above the time-stained and lofty walls, Jerusalem sits enthroned, a queen in the midst of an empire of desolation. Apart from its associations, we look upon it in admiration; but, connected with them, the mind is filled with reverential awe, as it recalls the wondrous events that have occurred within and around it.

The city is nearly in the form of a parallelogram, about three-fourths of a mile long, from east to west, and half a mile broad, from north to south. The walls are lofty, protected by an artificial fosse on the north, and the deep ravines of Jehoshaphat, of Gihon, and the Son of Hinnom, on the east, south, and west. There are now but four gates to the city. The Jaffa gate, the fish-gate of the New Testament, on the west; the Damascus gate, opening on the great northern road, along which our Saviour travelled, when, at twelve years of age, he came up with his mother and kindred; the gate of St. Stephen, on the east, near the spot where the first Christian martyr fell, and overlooking the valley of Jehoshaphat; and the Zion gate, to the south, on the crest of the mount. Immediately within the last, are the habitations of the lepers.

On the 18th, sent the sections of the boats to Jaffa, under the charge of Sherîf, whom we found here. We remained in camp until the 22d, the officers and men by turns visiting the city and its environs. During that time the weather was clear, cool at night, and delightful throughout the day.

Dr. Anderson left us here, his business calling him in another direction. Although not required to do so, he had, while with us, generously persisted in bearing his portion of watchfulness and fatigue; and by his invariable cheerfulness, his promptitude

and zeal on all occasions, proved, independently of his professional services, a most valuable auxiliary. He won our esteem, and carried with him the fervent good-will of every member of the party. Mr. Bedlow, who had studied medicine, and given us satisfactory proof of his capacity, was appointed to fill the place of Dr. Anderson.

The following account of his first day in Jerusalem is from the diary of the youngest member of the party, who was sent up from Ain Jidy in advance of the camp. I give it as the unvarnished recital of one who simply relates what he saw.

"Our bones yet ached from the effects of our fatiguing ride; nevertheless, we determined first to visit the holy places of Jerusalem, and then to regale ourselves with a civilized repast, and afterwards to luxuriate upon a bona fide bed.

"Our cicerone had arrived betimes, and installed himself in his office with that pleasantness of manner which the expectation of a liberal fee produces. His entreaties to make haste roused us from our recumbent postures, and we sallied forth through misable apologies for streets, lined on each side by dilapidated bazaars.

"The Via Dolorosa, or Sorrowful Way, first arrested our attention, and our guide pointed out the spot where our Saviour fell under the burthen of his cross. A little farther on, we had a partial view of the mosque of Omar, above the high walls by which it is surrounded. While we gazed upon it, a crowd of Abyssinian pilgrims called out to us with such fierce expressions of fanatic rage that our hands instinctively grasped our weapons. The movement had its effect, and after indulging our curiosity, we passed on unmolested.

"Next to Mecca, Jerusalem is the most holy place of Muhammedan pilgrimage, and throughout the year, the mosque of Omar and its courts are crowded with turbaned worshippers. This mosque, built upon the site of the Holy Temple, is the great shrine of their devotions. It is strictly guarded against all intruders, and there is a superstitious Muslim belief that if a Christian were to gain access to it, Allah would assent to whatever he might please to ask, and they take it for granted that his

first prayer would be for the subversion of the religion of the Prophet.

"In one of the streets we came to a low gate, passing through which and descending a long flight of stairs, we entered upon an open court in front of the church of the Holy Sepulchre, an ancient and venerable building. Scattered about the court were motley groups of Jew pedlars, Turks, beggars, and Christian pilgrims. The appearance of a poor cripple excited my compassion, and I gave him a piastre; but the consequences were fearful. The war-cry of the Syrian pauper, "backshish! backshish!" instantly resounded from all quarters, and we were hemmed in, pressed, and swayed to and fro by the rabble. Our cicerone plied his stick vigorously in our defence, and it truly seemed to be gifted with miraculous powers, for the blind saw, and the lame walked, and amid their imprecations upon our Christian heads we entered the church.

"Just within the door, seated on a raised divan, two sedate old Muslims were regaling themselves with miniature cups of coffee and the everlasting chibouque. Immediately in front of the entrance is the stone of unction, upon which, according to tradition, the body of our Lord was anointed. It is a plain slab of Jerusalem marble, slightly elevated above the floor of the church, and enclosed by a low railing. The pilgrims, in their pious fervour, crowding forward to kiss it, prevented our near approach.

"Turning to the left, we saw in the centre of the main body of the church a small oblong building, which contains the sepulchre. There were different processions crossing and recrossing each other with slow and measured pace, each pilgrim with a taper in his hand, and the numerous choirs, in various languages, were chanting aloud the service of the day. The lights, the noise, and the moving crowd had an effect for which the mind was not prepared, and with far less awe than the sanctity of the place is calculated to inspire, we entered the sepulchre. In the middle of the first apartment, for it is divided into two, is a stone, upon which the angel was seated when he informed the two Marys

of the resurrection. This room is about eight feet square, and beautifully ornamented. From this we crept through a narrow aperture in the inner apartment, against the north side of which is the sepulchre in the form of a low altar. It is about the same size as the first, and between the sepulchre and the southern wall, there is barely space to kneel. It was brilliantly lighted by rich and costly lamps.

"From the sepulchre we were led to see the pillar of flagellation, visible through a hole in the wall, but we did not credit the pious imposition. Thence, we ascended to the altar of Calvary, with three holes beneath it, where were planted the crosses upon which the Saviour and the two thieves were crucified. The holes are cut through beautifully polished marble.[1] Near by is a fissure in the limestone rock, caused, it is alleged, by the earthquake which closed the sad drama of the crucifixion. This rent is certainly not an artificial one. Before leaving the church, we visited the tomb of Godfrey of Bouillon, and the place where the true cross, it is said, was found by the Empress Helena.

"We next determined to visit a spot respecting the identity of which even the mind of the most skeptical can have no room for doubt. Passing through the Damascus gate, we skirted the northern wall, and descending into the valley of Jehoshaphat, and crossing the bridge over the dry bed of the Kidron, we commenced the ascent of the Mount of Olives. We soon reached the summit, but the scorching heat of a Syrian sun did not permit us to enjoy long the magnificent view it afforded. Parts of the Dead Sea were visible, and looking down upon it, we felt proud in being able to say that we were the first thoroughly to explore this sea, which has for ages kept its mysteries buried in the deep bosom of its sullen waters.

"On our return, we stopped at the garden of Gethsemane, which is held by the Latins, who have enclosed it with a wall. After repeatedly knocking at the gate, we were about to come away, when it was opened by a garrulous old Spaniard, whose

[1] The writer was not aware that the surface of the natural rock had been cut away, and marble placed upon it.

visage was as gnarled as the trees we now saw before us. The garden consists of eight enormous olive-trees, their venerable appearance truly typical of old age; and there can scarcely be a reasonable doubt that this is, indeed, the very place where the Saviour wept and prayed.

"Crossing the valley of Jehoshaphat, and ascending the slope of Mount Moriah, we passed by the Golden Gate, now walled up by the Turks. Why it is called 'golden,' I am unable to say, unless from its rich and elaborate sculpture.

"We next came to the fountain of the Virgin, which flows through a subterranean passage into the pool of Siloam, and is thence distributed along the slope of the valley. The pool is near the foot of the mount, and is a deep oblong pit, with fragments of columns in the centre. There are steps leading down to it on the left side, and the water is muddy and shallow. Here Christ restored the blind man to sight.

"Re-entering the city through the Jaffa gate, our cicerone declared 'by the body of Bacchus' that he would show us the greatest sight in the Holy City. It was the Armenian convent near by. We entered through the portal, and were ushered into an antechamber by a sour-looking old monk, where, in the midst of a crowd of camel-drivers, we waited for permission from the patriarch to see the riches of the convent. We were first shown the portraits of all preceding patriarchs, now canonized as saints in their calendar; while that of the present one was the most gorgeously framed—par excellence, the greatest saint of them all. Persons well versed in the art of discolouring canvass had painted these miserable daubs, which, taking the portrait of the present patriarch as a fair criterion, bore not the slightest resemblance to their originals.

"We then entered the chapel, the chef-d'œuvre of this costly building. The most tasteful ornaments were the doors, made of tortoise-shell, and inlaid with mother-of-pearl. The walls were of mosaic, representing saints and devils engaged in most furious combats; but unfortunately, although our cicerone zealously endeavoured to point out which were the saints and which the

devils, we often fell into a mistake respecting them. We were shown throughout the convent, which is constructed in the well-known Saracenic style of architecture; and the patriarch long detained us with an account of the improvements he intended to make.

"We returned to our hotel sorely fatigued, and for lack of better amusement, watched the preparations for dinner with more avidity than would a hungry citizen of Arkansas the like evolutions on board of a western steamboat."

Jerusalem, its narrow, tortuous streets, with its pavement of large round stones, and its arches and recesses, time-stained and ivy-grown, and the walls of many of the houses, like those of the pavement, a consolidated lime-stone, cream-coloured and streaked with blood-red, has been repeatedly described.

Visitors to Jerusalem consist, usually, of three classes:—the ignorant and credulous, who are prepared to believe everything; the conceited and intolerant, who are equally determined to believe nothing; and the weak and indolent, who side with the last, because it is easier to doubt than to investigate.

The first listens with greedy ear, and assenting mind, to the most improbable legends. The second, stubborn and querulous, scoffs openly at what he hears, and laughs in his sleeve at the simplicity of those who differ from him. The third, not sufficiently ill-natured to sneer, adopts the opinions, without the malevolence, of others, who, because they are more positive, he concludes must be the best informed.

Most of the wall, and all the houses of Jerusalem, were demolished by Titus. Who, therefore, can believe in the assigned localities along the "Via Dolorosa?" Who can credit that here the Virgin Mary was born; there, the Saviour instituted the sacrament of the last supper; or that yonder is the house where Pilate sat in judgment? Faith does not require, and true reverence would not be sustained by, such weak credulity.

But there is a place which, above all others, should be approached with humility,—the church of the Holy Sepulchre; for even the greatest cavillers admit that, if it do not cover all the

sacred localities assigned to it, some, at least, may lie beneath its roof, and none can be be very far distant from it.

It is known that early in the second century, the pagan conquerors of Jerusalem erected a statue to Jupiter, on the site of the Holy Sepulchre, and one to Venus, on Mount Calvary;—thus, the very means taken to obliterate the recollections of those localities, served, as has been often remarked, to perpetuate them. The Christians were never absent from the city, except at its destruction by Titus, when they took refuge, for a short time, in Pella. In less than two centuries after the destruction of the temple, the holy places were restored to them. So that they could not have forgotten them. Can the Jews forget the site of the temple?

It is not my purpose to enter into an argument. No one, however, should venture to approach the sacred precincts without learning thus much; and he who, with this knowledge, enters them with a cavilling spirit, is a heartless scoffer.

It is true that much occurs in these places calculated to shake the faith of the unstable, who cannot distinguish between what men do and what they are enjoined to do. The Almighty withheld from the Israelites all knowledge of the final resting-place of their great law-giver: may not the same Supreme Wisdom have left us in ignorance of the exact position of places infinitely more sacred, to preserve them from desecration, whether of wanton malice or intemperate zeal? The *possibility* that any assigned spot may be the true one, and the certainty that it cannot be very far removed from it, is sufficient to inspire awe in every feeling breast.

Disgusted with the conduct of many of the pilgrims, in paschal week, without looking to the impelling motive, many come to the sage conclusion that the temple must be an imposture because some of its visitors are disorderly;—which is about as fair as to judge of the nature of our beautiful institutions by the pugilistic combats which sometimes (thank God, rarely) disgrace our national halls of legislation.

Intemperate zeal may be as reckless as intoxication from

drink; — But is the sincere Christian to be, therefore, classed with a fanatic; or a sober citizen with an inebriate? At all events, on such a subject, an excess of enthusiasm is preferable to insensibility; and he who believes and bows down is more to be envied than he that stands scornfully erect because unconvinced *by so many feet and inches.* He who, in such places, employs himself in estimating the sizes of objects, and their exact distances from each other, thereby endeavouring not only to destroy what he persuades himself are the illusions, but absolutely undermining the religious belief, of others, is little better than a heathen.

There is nothing which so perverts the heart as intellectual pride. The calamities which have most afflicted and debased our race have sprung from the abuse of the free and gifted intellect. In the perversity of a corrupt will, and in the excesses of a presumptuous understanding, man has frightfully abused the powers entrusted to him for high and holy purposes. Too often, the extent of human knowledge is the measure of human crime.

History, revelation, and tradition, unite to teach us that the unchastened will, and the perverted genius, seeking to snatch the forbidden fruit, have been man's first, greatest, unforgiven sin. While other crimes seem rather to excite the pity than to provoke the immediate wrath of heaven, and, by degrading the soaring spirit to the earth, serve to humble its pride, this appears to be a rebellion against Him, who is a jealous God, and who will avenge his cause. From the fall of the son of the morning star, who, in the excess of a presumptuous understanding, dared to wage war "against the throne and monarchy of God," down, through the deserted paths of paradise, to the terrible convulsions of the last century, when an impiety, second only to that of the archangel ruined, met with a punishment scarcely less horrible, we see, everywhere, this frightful lesson written in characters of ruin.

Yet mind is not like the "corporal rind" with which it is "immanacled," subjected to age, and decay, and decrepitude. Nor is it refluent in its essence, having a latent power within, or a controlling principle without, which proclaims, thus far shalt

thou go, and no farther. It is immortal in its energies and aspirings—ever advancing and to advance—soaring still higher and higher with untiring wing, and gaining new scope and vigour from every flight towards Him from whom it descended, and with whose image it is stamped. Limitless and free, its nature is progressive, its spring is upward; no barrier to check its lofty aspirations; no power to control its daring flight; no obstacle to stay its resistless progress, *but* its own wild and erring presumption, its own fiery and impetuous promptings, its own inherent and rebellious pride. As long as, with humble heart and chastened will, it seeks the end of its being in the ocean of truth, its stream can never flow backward.

Such is the law of all intelligence. "The rapt seraph that adores and burns," the chief of the hierarchy of Heaven, the moment he deems himself sufficient for his own support, by that one act of impious self-idolatry, falls, headlong, from his high estate.

Such is the awful and salutary lesson which we glean from that book, which contains all that is useful in time and hopeful in the future.

As if to impress indelibly upon the soul of man the terrible consequences of a presumptuous intellect, a jealous Deity has enforced the lesson with special revelations. He has not only bestowed upon us the godlike capacity of reason to collect and compare the fruits of experience in the ages which have been gathered to the past, but he has suspended the arm of the cherubim that we might enter the forbidden paths of paradise to read, beneath the tree of knowledge, the price of disobedience. And he has unbarred the gates of heaven itself, that, in the fall of the angelic hosts, we might tremble at the instant and irremediable ruin which followed the single sin of thought. One truth we therefore know, that, unaccompanied with an upright heart and a chastened will, with the morality which springs from religion, the measure of man's intellect is the measure of his ruin. The pride of wealth inspires contempt, and the pride of place awakens resentment,—they are human follies, and are punished by human means; but the pride of intellect, wherein the gifted wars with

the Giver, is a crime which the dread Creator has reserved for special retribution.

There is a remark of Sir H. Davy, so appropriate to this subject, that I cannot withhold it:—"I envy no quality of the mind or intellect of others,—not genius, wit, nor fancy; but if I could choose what would be the most delightful, and, I believe, most useful to me, I prefer a firm religious belief to any other blessing; for it makes discipline of good, creates new hopes when earthly hopes vanish, and throws over the decay, the destruction of existence, the most gorgeous of all lights; awakens life in death, and, from corruption and decay, calls up beauty and divinity; makes an instrument of misfortune and of shame the ladder of ascent to paradise, and, far above all combinations of earthly hopes, calls up the most delighful visions of palms and amaranths,—the gardens of the blest, and the security of everlasting joys, where the sensualist and the skeptic view only gloom, decay, annihilation, and despair."

My apology for touching on this subject, which is without my sphere and above my capacity, is the pain I have felt, with others, in witnessing the effects of the cavilling spirit of those who plume themselves on being considered the most literary of modern travellers to the Holy Land. For their peace of mind here, I hope that they may never know how much they have injured a cause, of which some of them are the professed champions; and, for their future welfare, every true Christian will pray that the evil has not been premeditated. I have not meant to reflect upon those who honestly doubt; for faith is not a product of reason, but a gift, an inspiration from on high. I allude to those whose intellectual pride prompts them to parade their own attainments in opposition to, rather than in the search of, truth,—which never shrinks from a fair encounter. In the words of Milton, "Truth is strong, next to the Almighty." The mists of human prejudice cannot long withstand the penetrating light of truth,—which is the purest ray, reflected from the brightest gem in the diadem of the Great Jehovah.

The present condition and future prospects of Palestine, is a

theme too copious for this work, even if it were not above the capacity of its author. I can only express an opinion, founded upon what I have seen and heard, that the fanaticism of the Turks is fast subsiding, with the rapid diminution of their number, while the Christian and Jewish population is increasing. As yet, this holds good only of the capital. The country traversed by nomadic tribes, and cultivated but in patches, continues to be as insecure as it is unproductive. But, like the swelling of the waters which precede the tide of the flood, there are indications of a favourable change. The Muhammedan rule, that political sirocco, which withers all before it, is fast losing the fierce energy which was its peculiar characteristic, and the world is being gradually prepared for the final dismemberment of the Ottoman empire.

It needs but the destruction of that power which, for so many centuries, has rested like an incubus upon the eastern world, to ensure the restoration of the Jews to Palestine. The increase of toleration; the assimilation of creeds; the unanimity with which all works of charity are undertaken, prove, to the observing mind, that, ere long, with every other vestige of bigotry, the prejudices against this unhappy race will be obliterated by a noble and a God-like sympathy. "Many a Thor, with all his eddas, must first be swept into dimness;"—but the time will come. All things are onward; and, in God's providence, all things are good.

The fulfilment of the prophecy with regard to the Egyptians ensures the accomplishment of the numerous ones which predict the restoration of the tribes. Besides overwhelming Pharaoh and his host, the Almighty decreed, through Ezekiel, that Egypt should never obey a native sceptre. From Cambyses to the Mamelukes; from Muhammed to Ali Pasha, how wonderfully has this judgment been carried out!

From the 15th to the 22d of May was devoted to making astronomical observations, and reconnoitering the country for the most eligible route to level across to the Mediterranean. All the time not appropriated to duty, was spent in visiting over and over again the interesting localities in and around Jerusalem. Above all others, the spot least doubted, and very far from the least

hallowed, was the garden of Gethsemane. It is enclosed by a high stone wall, and when we saw it, the trees were in blossom; the clover upon the ground in bloom, and altogether, in its aspect and its associations, was better calculated than any place I know to soothe a troubled spirit.

Eight venerable trees, isolated from the smaller and less imposing ones which skirt the base of the Mount of Olives, form a consecrated grove. High above, on either hand, towers a lofty mountain, with the deep, yawning chasm of Jehoshaphat between them. Crowning one of them is Jerusalem, a living city; on the slope of the other is the great Jewish cemetery, a city of the dead. Each tree in this grove, cankered, and gnarled, and furrowed by age, yet beautiful and impressive in its decay, is a living monument of the affecting scenes that have taken place beneath and around it. The olive perpetuates itself, and from the root of the dying parent stem, the young tree springs into existence. These trees are accounted 1000 years old. Under those of the preceding growth, therefore, the Saviour was wont to rest; and one of the present may mark the very spot where he knelt and prayed, and wept. No cavilling doubts can find entrance here. The geographical boundaries are too distinct and clear for an instant's hesitation. Here the Christian, forgetful of the present, and absorbed in the past, can resign himself to sad yet soothing meditation. The few purple and crimson flowers, growing about the roots of the trees, will give him ample food for contemplation, for they tell of the suffering life and ensanguined death of the Redeemer.

On the same slope and a little below Gethsemane, facing the city, are the reputed tombs of Absalom, Zachariah, St. James, and Jehoshaphat, the last giving its name to the valley. Some of them are hewn bodily from the rock, and the whole form a remarkable group. That of Absalom in particular, from its peculiar tint, as well as from its style of architecture, reminded us of the description of the sepulchral monuments of Petra. It is eight feet square, surmounted by a rounded pyramid, and there are

six semi-columns to each face, which are of the same mass with the body of the sepulchre.

The tomb of Zachariah is also hewn square from the rock, and its four sides form a pyramid. The tomb of Jehoshaphat has a handsomely carved door; and a portico with four columns indicates the sepulchre where St. James, the apostle, concealed himself.

It was in the valley of Jehoshaphat that Melchisedec, king of Salem, met Abraham on his return from defeating the four kings in the vale of Siddim. In the depths of this ravine Moloch was worshipped, beneath the temple of the Most High, which crowned the summit of Mount Moriah.

In the village of Siloam, the scene of Solomon's apostasy, the living have ejected the dead, and there are as many dwelling in tombs as in houses. Beneath it, at the base of the Mount of Offence, is the great burial-ground, the desired final resting-place of Jews all over the world. The flat stones, rudely sculptured with Hebrew characters, lie, as the tenants beneath were laid, with their faces towards heaven. In the village above it and in the city over against it, the silence is almost as death-like as in the grave-yard itself. Here the voice of hilarity or the hum of social intercourse is never heard, and when man meets his fellow, there is no social greeting. The air here never vibrates with the melodious voice of woman, the nearest approach to a celestial sound; but, shrouded from head to foot, she flits about, abashed and shrinking like some guilty thing. This profound silence is in keeping with the scene. Along the slope of the hill, above the village, the Master, on his way to Bethany, was wont to teach his followers the sublime truths of the gospel. On its acclivity, a little more to the north, he wept for the fate of Jerusalem. In the garden below, he was betrayed, and within those city walls he was crucified. Everything is calculated to inspire with awe, and it is fitting that, except in prayer, the human voice should not disturb these sepulchral solitudes.

From the slope of the Mount of Olives projects a rock, pointed out by tradition as the one whereon the Saviour sat when he pre-

dicted and wept over the fate of Jerusalem. It is farther alleged that upon this spot Titus pitched his camp when besieging the city. Neither the prediction nor its accomplishment required such a coincidence to make it impressive. The main camp of the besiegers was north of the city, but as the sixth legion was posted on the Mount of Olives, the tradition may not be wholly erroneous.

A little higher, were some grotto-like excavations, hypothetically called the Tombs of the Prophets; and above them, were some arches, under which, it is said, the Apostles composed the creed. Yet above, the spot is pointed out where the Messiah taught his disciples the Lord's Prayer—that beautiful compend of all that is necessary for man to ask, whether for time or eternity.

On the summit of the mount are many wheat-fields, and it is crowned with a paltry village, a small mosque, and the ruined church of the Ascension. In the naked rock, which is the floor of the mosque, an indentation is shown as the foot-print of the Messiah, when he ascended to heaven. Apart from the sites of the Temple, of Calvary, and of the Holy Sepulchre, the assigned localities within the city walls, such as the Arch of the Ecce Homo, and the house of the rich man before whose gate Lazarus lay, are unworthy of credit. But those without the walls, like the three first-named within them, are geographically defined, and of imperishable materials. While one, therefore, may not be convinced with regard to all, he feels that the traditions respecting them are not wholly improbable.

From the summit, the view was magnificent. On the one hand lay Jerusalem, with its yellow walls, its towers, its churches, its dome-roof houses, and its hills and valleys, covered with orchards and fields of green and golden grain, while beneath, distinct and near, the mosque of Omar, the Harem! (the Sacred!) lay exposed to our infidel gaze, with its verdant carpet and groves of cypress, beneath whose holy shade none but the faithful can seek repose. On the other hand was the valley of the Jordan, a barren plain, with a line of verdure marking the course of the sacred river, until it was lost in an expanse of sluggish water, which we recognised as the familiar scene of our recent labours.

The rays of the descending sun shone full upon the Arabian shore, and we could see the castle of Kerak, perched high up in the country of Moab, and the black chasm of Zerka, through which flows the hot and sulphureous stream of Callirohoe.

No other spot in the world commands a view so desolate, and, at the same time, so interesting and impressive. The yawning ravine of Jehoshaphat, immediately beneath, was verdant with vegetation, which became less and less luxuriant, until, a few miles below, it was lost in a huge torrent-bed, its sides bare precipitous rock, and its bed covered with boulders, whitened with saline deposit, and calcined by the heat of a Syrian sun. Beyond it, south, stretched the desert of Judea; and to the north, was the continuous chain of this almost barren mountain. These mountains were not always thus barren and unproductive. The remains of terraces yet upon their slopes, prove that this country, now almost depopulated, once maintained a numerous and industrious people.

North of Gethsemane, nearer the bed of the ravine and the one-arched bridge which spans it, is a subterranean church, in a grotto reputed to contain the tomb of the Virgin Mary. Having no faith in the tradition, which is based on an improbable legend, I did not visit it; but in passing by, accoutred in a soiled and salt-encrusted dress, the only one I had, I saw a European fop ascending the flight of steps, attired in a short frock, tightly-fitting pants, a jockey-cap upon his head, a riding-whip in his hand, and the lines of his face wreathed in a smile of smirking self-conceit, —not one feature of the man or his dress in keeping with the scenes around him.

H. B. M. Consul, Mr. Finn, as I have before said, kindly took charge of the money I sent to him; and, furthermore, put himself to great trouble in paying the drafts which, from time to time, I made upon it; and, also, in forwarding provisions to our depôt at Ain Jidy. In all matters of business, he was as attentive as he could have been were he our own consular representative. But from none of the foreign residents in Jerusalem did we receive the slightest personal attention. This I ascribe to the

condition of our wardrobe. Before commencing the descent of the Jordan, we had been compelled to send back from Tiberias everything that could possibly be dispensed with. Each one, officer and man, retained only the suit he wore, with a change of linen; and, whenever circumstances permitted, did his own washing. Sometimes, when both of those garments required the process, we lay in the water until one of them had dried. From an indifferent tailor, we procured a few articles of dress a short time previous to our departure from Jerusalem, but had to be economical, in order to reserve what money remained for the necessary expenses of the expedition. I mention the circumstance, not as a matter of complaint, but to account to any of those gentlemen who may see this, for our toil-worn and shabby appearance

Returning from the Mount of Olives, we passed along the hill of Zion, and made another circuit of the city.

A little below the gate of St. Stephen is the pool of Bethesda, where our Saviour healed the paralytic. It is now dry, and partly filled with rubbish.

Yet farther south, in the face of the eastern wall, near the court of the mosque of Omar, is the Golden gate, now built up. Through this gate, it is supposed, the Messiah entered in triumph on the Sunday preceding his crucifixion.

Some distance down, is the Fountain of the Virgin; and yet farther below, the pool of Siloam, which has been mentioned before. The water, which is hard and unpalatable to the taste, has no regular current, but ebbs and flows at intervals of a few minutes.

North of the city, on the margin of the Damascus road, was a picturesque scene — hundreds of Jews, enjoying the fresh air, seated under enormous olive-trees — the women all in white shrouds, the men in various costumes — some with broad-brimmed black hats, and many with fur caps. There were also many Turks and Christians abroad. The Jewesses, while their figures were enveloped in loose and uncomely robes, allowed their faces to be seen; and the Christian and the Turkish female exhibited,

the one, perhaps, too much, the other, nothing whatever of her person and attire. There was also a marriage-procession, which was more funereal than festive. The women, as usual, clothed all in white, like so many spectres, chaunted unintelligibly, in a low, monotonous, wailing tone; while some, apparently the most antique, for they tottered most, closed each bar with a scream like a diapason. The least natural and the most pompous feature of the scene, was the foreign consuls, promenading with their families, preceded by Janissaries, with silver-mounted batons, stalking solemnly along, like so many drum-majors of a marching regiment. As the sun sank behind the western hills, the pedestrians walked faster, and the sitters gathered themselves up and hastened within the walls.

The present walls of the city were rebuilt in the 16th century, and vary from thirty to sixty or seventy feet in height, according to the inequalities of the ground. They are about ten feet thick at the base, narrowing to the top. The stones are evidently of different eras, extending back to the period of Roman sway, if not to the time when Judea was an independent kingdom. Some massive pieces, near the south-eastern angle, bear marks of great antiquity. From a projecting one, the Turks have a prediction that Muhammed, their Prophet, will judge his followers. We have also a prediction respecting this vicinity which will prove as true as the other is fabulous. It is up the valley of Jehoshaphat that the prophet Joel declares the quick and the dead shall come to judgment.

On the third day after our arrival, we went to Bethlehem, two hours distant. Going out of the Jaffa gate, and obliquely descending the western flank of Mount Zion, we crossed the valley of the son of Hinnom (Wady Gehenna, or valley of Hell), by the wall of the lower pool of Gihon. The road then turned southwardly, and ran mostly parallel with the aqueduct from Solomon's pools. This aqueduct consists of stones hollowed into cylinders, well cemented at the joints, and supported upon walls or terraces of rock or earth, and mostly concealed from

sight. Here and there, a more than usual luxuriance of vegetation indicated places where water was drawn from it to irrigate the olive orchards which, for much of the way, abounded on our left; and, occasionally, a stone drawn aside disclosed a fracture in the trough beneath, where the traveller might quench his thirst.

We soon came to the well of the Magi, assigned by tradition as the spot where the star reappeared to the wise men from the east. The country on our left was here broken and rough, and on the right was the plain of Rephaim, with the convent of John the Baptist, erected on the spot where the great precursor was born, and the grotto where the Virgin Mary pronounced that sublime hymn, beginning "My soul doth magnify the Lord." We next came to the tomb of Rachel, in the plain of Ramah,—a modern Turkish building, but the locality of which is believed to be correctly assigned. It is a small building, with two apartments, the one over the tomb being surmounted by a dome. On the right was the wilderness of St. John, wherein the Baptist practised his austerities. In that direction, too, is the valley of Elah, where David slew the giant; and in the valley before us, it is said the army of Sennacherib the Assyrian was encamped, when

"The angel of death spread his wings on the blast."

Ascending the hill from the tomb, and for the second time during the ride recognising the Dead Sea through gorges in the mountains, we passed some extensive olive orchards, and after turning aside to the left to look at a nearly dry cistern called David's Well, and admiring the luxuriant groves of olives and figs, and the many vineyards which beautify the head of the ravine of Ta'âmirah, we entered Bethlehem, the birth-place of the Redeemer; and went direct to the Franciscan convent, a large, massive, and ancient building. The church within it, erected by the Empress Helena, is in the form of a cross. It is supported by four rows of twelve columns each, without a ceiling, and presented the appearance of a net-work of longitudinal and

transverse beams of wood, with the roof above them. But this church, and the grotto of the Nativity within it, has been repeatedly and accurately described.

Many visitors to Bethlehem have persuaded themselves, to use the words of a recent one, "that the Saviour was *not* born in a subterraneous cavern like this, difficult of access to cattle, but in an approachable stable attached to the khan, or inn, in which the virgin mother could not be accommodated." Without dwelling on our own observation of the frequent and almost universal appropriation, where practicable, of caverns and recesses in the rocks for sheltering man and beast from the heat and inclemency of the weather, and forbearing to quote from Stephens, whose experience was similar to our own, I extract some passages from Calmet's dissertation upon the habitations of the ancient Hebrews, to show that such places were frequently selected as desirable human dwellings.

"The rocks and the caverns were not only places of retreat, and forts against enemies, in times of war and trouble; they were also ordinary dwelling-places, both commodious and agreeable, in the country of the Israelites. On the coasts of the Red Sea and the Persian Gulf, in the mountains of Armenia, in the Balearic Islands, and in the isle of Malta, we learn that certain people had no other homes than the hollows of the rocks, scooped out by their own labours; from which circumstance they took the name of Troglodytes, which signifies, in Greek, those who hide themselves in caverns.

"In short, they were the ordinary retreat of the prophets and the just in times of persecution, to avoid the machinations of the wicked; and in times of peace, to fly from the corruptions of the world, and to exercise themselves in practices of piety and prayer. It was this mode of life that Elias, St. John the Baptist, and Jesus Christ adopted.

"The summer habitations were of various kinds, or rather, they had various means of protecting themselves from the extreme heat of the sun. Sometimes it was in places deep and hidden,

where its ardour could not penetrate, under crypts, subterranean porticoes, &c." [1]

To the east of Bethlehem is the hill where the shepherds heard the annunciation of the birth of the Messiah; and in the plain below, the field where Ruth gleaned after the reapers. The country around was luxuriant with vegetation, and the yellow grain, even as we looked, was falling beneath the sickle. Variegated flint, chalk and limestone, without fossils, cropped out occasionally on the hill-sides; but along the lower slopes, and in the bottom of the valley, were continuous groves, with a verdant carpet beneath them. It was the most rural and the loveliest spot we had seen in Palestine. From among many flowers we gathered a beautiful white one, free from all earthly taint, fit emblem of the purity of the infant Godhead.

In the Latin convent at Jerusalem, poor pilgrims are allowed to remain thirty days, with two meals a-day, free of cost; in the one at Bethlehem, three days; and at Ramleh, one day. No Frank is permitted to hold real estate in Palestine, or, I believe, in any part of the Turkish dominions. In the country around Jerusalem, olives, figs, wheat, barley, dhoura, lentils, melons, cucumbers, artichokes, and many leguminous plants and Irish potatoes are cultivated; the last in small, experimental patches. The silk-worm is also reared, and some little silk is made.

---

[1] Those who wish to see more on the subject, are referred to Pliny, lib. vi. c. 29. Strabo, lib. xi. c. 26. Diodorus Siculus, lib. v. Josephus' Antiq., lib. xiv. c. 27, where he speaks of the caverns of Galilee. Genesis, xix. 30. Judges, xv. 8. 1 Kings, x. 11; xxiv. 4. Judges, vi. 2. 1 Kings, xiii. 6; xviii. 4. Hebrews, xi. 38.

CHAPTER XXI.

FROM JERUSALEM TO JAFFA.

Monday, May 22. Having completed all the necessary arrangements, given the officers and men time to recruit, and to see Jerusalem and its vicinity, broke up the camp, and started to run the line of level across to the Mediterranean, thirty-three miles distant, in a direct line. The desert being passed, we substituted mules for camels, to transport our baggage.

We recommenced levelling from the bench-mark we had made north-west of Jerusalem, and carried the line to the highest point, but little less than four thousand feet above the surface of the Dead Sea, before skirting down the Wady Lüfte.

The vegetation increased in luxuriance, and in vividness of colour, as we descended. The mountain-sides were cut in terraces, many of them but a few yards wide, bearing olive, fig, and apricot trees, and numerous extensive vineyards.

On the second day we passed a ruin, pointed out as the castle of the Macchabees; and among the hills around, it is supposed that the Virgin visited the mother of the Baptist. In our route, we may have crossed the dry bed of the brook where David gathered the pebbles, with one of which he slew the Philistine, and passed the site of the village of Emmaus, on the road to which our Saviour conversed with two of his disciples after his resurrection.

When abreast of a village, in which were the ruins of a Christian church, an old Arab called out, "O ye Muslims, come forth and see the Christians searching for treasures concealed by their forefathers in this country." Great curiosity was exhibited by the people with respect to our operations. All desired to look through the telescope, and even little children were held up for a peep.

The road led over high ridges; the vegetation extremely luxuriant, and the hill-sides terraced, with many vines and fig-trees, and groves of olive on each side. The olive is only picturesque in clusters. Individually it is an ungainly tree. With the appearance of greater strength than the oak, its branches are less graceful, and its leaves are smaller and less vivid in colour. The old trunks, gnarled and twisted, present to the eye vast bodies with disproportioned limbs. Those which are partially decayed are protected by stones piled up in the hollows.

From the summit of the highest ridge, through the mist which curtained it in the distance, we beheld the blue, the glorious Mediterranean. Not the soldiers of Xenophon cheered more heartily than we did, when we beheld its broad expanse stretching towards the west, where lay our country and our homes.

The whole face of the country since leaving Jerusalem bore evidence of a high state of cultivation, and after the calcined cliffs of the Dead Sea and the utter barrenness of the desert of Judea, our senses were soothed by the soft and refreshing green of these terraced hills.

On the fifth day descended the dreadful road which leads down Wady Ali, and through Bab Wady Ali, (Gate of the Ravine of Ali), issued out upon the vale of Sharon, covered with immense fields of ripened grain; the thick, clustering stems bending to the breeze, and their golden surfaces chequered with the shadows of passing clouds. Behind us were the rugged mountains; before us the lovely plain, dotted with villages, and covered with a whole population gathering the harvest; and beyond, in the distance, the far-stretching sea, over which lay our homeward route. In the ravine, we saw in great profusion the corn poppy, its bright scarlet flowers presenting a gorgeous appearance. The acacia was also abundant.

Long before sunrise, the next day, the industrious fellahin were at work in the fields. The scene was pastoral and picturesque. The herdsmen, with their flocks of black goats on the hill-sides, the cattle grazing below them; the reapers among the grain, and the women gleaning after them; while an armed Nubian guard sat

under the shadow of a tree, his ample costume setting off his jet-black skin. A light wind played in the loose folds of his white āba, and thence sweeping on, bowed down the heads of the unreaped barley, presenting an appearance like the surface of a still lake, when clouds are drifting over it.

We soon passed the Bir Dier Ayoub, the road, which was yet but a bridle-path, becoming better, and the mountains receding on each side, and giving at once an almost uninterrupted view of the plain. On the summit of a lofty hill before us, was the village of Latrûn (Thief), named by tradition as the birth-place of the repentant thief upon the cross. Instead of following the road over the hill and through the village, we skirted its southern base, and passing the well, struck first into the Gaza road, and then into the usual road to Ramleh.

Gaza, the famous town of the Philistines, renowned for the feats of Samson, was in a direct line, about thirty miles distant. Once the residence of a king, it is now a paltry village. It was taken by Alexander the Great, after a siege of two months; and Quintus Curtius relates that, in imitation of Achilles, the ungenerous conqueror, who was twice wounded during the siege, dragged twice round the walls, at his chariot-wheels, the body of the general who had gallantly defended it.

Pursuing the road to Ramleh, we crossed Merj ibn 'Amir, an extensive plain under high cultivation. The scene must have been similar to those of the days of Scripture. Below the village, and on the sides of the hill, the fields, in some spots, were yellow with the ripened grain; in others, large quantities, newly reaped, were spread upon the threshing-floors, and the cattle, yoked in couples, were treading it out, and the whole population of the village was at work, reaping, gleaning, tossing in the sheaves, or raking aside the chaff.

The small, square houses of all the villages, were of uncut stones, cemented and plastered with mud, and with flat, mud roofs. The mud floors are usually several feet below the surface of the ground; and the only aperture in the walls is the low and narrow doorway. Through the last, a stream of smoke is ever

issuing, tainted with the fœtid odour of the fuel, the sun-dried excrement of the camel; which is so offensive, that the deaf and the blind detect with their nostrils, the impregnated atmosphere of a village. The habits of the people are as filthy as their dwellings are uncomfortable, and it is not surprising that, with all their simplicity of life, there are so few instances of longevity.

The town of Ramleh, seated in the plain, with its tower, its minarets, its ruins, and its palm-trees, looked more like an oriental city, than any we had seen in Palestine. In this plain, according to tradition, the infant Saviour, the Virgin, and St. Joseph, passed a night, in their flight to Egypt.

Ramleh is the only place in the interior of Palestine where the American flag is permitted to fly. There were fine olive-groves, and many cypresses, around the town; and beyond, a lovely plain, bounded by a range of mountains on one hand, and the Mediterranean on the other.

Ramleh is supposed to have been the Rama-Ephraim of the Old Testament, where Samuel judged the people, and where the elders assembled to demand a king. It has now a large convent, rebuilt, it is said, by Philip the Good, Duke of Burgundy.

Proceeding along the plain of Beth Dagon, we passed Lyd, the Lydda of the New Testament, and the Diospolis of the Romans, where St. Peter miraculously cured the man afflicted with the palsy.

The uncultivated parts of the plain were beautified by the violet purple flowers of the plumbago, which grows more luxuriantly here than in southern Europe, the heads of the flowers being much longer, and the colours more vivid.

At the village of Yazŭr, we turned to the left and followed the Frank road, the one on which Napoleon marched to and from Gaza. There were a number of people in the fields, but not many travellers on the road. Some wandering dervishes, bearing banners, and a few returning Christian pilgrims, passed us in the course of the morning. Pursuing thence nearly a due-west course, we came out on the sand-hills, and planted the level on the mar-

gin of the Mediterranean, about one and a half miles south of Jaffa. The task was at length accomplished. We had carried a line of levels, with the spirit-level, from the chasm of the Dead Sea, through the Desert of Judea, over precipices and mountain-ridges, and down and across yawning ravines, and for much of the time beneath a scorching sun. It had been considered by many as impracticable. It has, however, been accomplished; and with as much accuracy as, I believe, it can be done. The instrument was a capital one of Troughton's, imported by Blunt. It was of the most recent construction, with staves to be read off by the observer. The adjustments of the instruments were frequently examined, and we were careful to make the observations as nearly mid-way as possible. The whole credit of this is due to Lieutenant Dale, to whom, in full confidence of his zeal and capacity, I assigned the task of levelling. The result is confirmatory of the skill and extraordinary accuracy of the triangulation of Lieutenant Symonds, R. N.

We found the difference of level, in other words, the depression of the surface of the Dead Sea, below that of the Mediterranean, to be a little over 1300 feet. The height of Jerusalem above the former sea, is very nearly three times that of this difference of level, while, at the same time, it is almost the exact multiple of the depth of that sea, of the height of its banks, and of the depression of its surface.

Our work accomplished, we repaired to the country-house of Mr. Murad, our worthy consular representative, who had kindly placed it at our disposal.

It was a delightful spot to recruit in, after our fatigue. A great many swallows were flying in and out, and twittering over our heads, in the open alcove we selected for our bed-chamber. We had been so long accustomed to camping in the open air, that we could not reconcile ourselves to sleeping in a room; moreover, we felt more secure from insects, away from apartments that had recently been inhabited.

We remained in the quarters so hospitably assigned to us until the 6th of June; and found full occupation in bringing up our

work, particularly the astronomical and barometrical observations, and the measurement of the level, and rebuilding our boats by putting their sections together. The physical repose was truly grateful.

To the north of the town, a short distance from the gate, for Jaffa has but one, and immediately upon the sea shore, is a village inhabited by Copts. These people followed Ibrahim Pasha from Egypt, but since the restoration of the country to Ottoman sway they have been driven from the town, and live in their poor mud village with the sea before and a graveyard behind them. Possessing no means of transportation over the first, along which they must often wistfully gaze towards their native country, the last remains as their only refuge from hunger, oppression, and unrewarded toil. Their complexions are dark, but the dress of the men differs in no respect from that of Arabs of the lowest class. The women wear a triangular piece of thin dark cloth suspended from the forehead, sometimes fringed with coins, and concealing the nose, mouth, and chin.

In another graveyard to the left was an Egyptian woman at her devotions. Eastern women are rarely seen to pray by travellers. Like the majority of their sex all over the world, they seem to shrink from public exhibition. Once before, in a Turkish burial-ground just without St. Stephen's gate, Jerusalem, I saw some black slaves making their prostrations before a tomb, but could not tell whether they were worshipping God, or paying homage to the shade of their master. The real belief of Muhammedans with regard to the future prospects of women, I have never been able to ascertain. The vulgar idea that they are denied the possession of souls by the Koran, is, however, an incorrect one. Muhammed named four as worthy of Paradise. But it is impossible, for a Christian at least, to obtain satisfactory information from a native on this subject. They never speak of their women to strangers, and consider any allusion to them as insulting. 'Awad, our guide, was the only one who would answer our questions in this matter, and he did it with perceptible reluctance. Indeed, all the Arabs with whom we have been

associated, and they were many and of various tribes, were very reserved about their domestic affairs, and more evasive even than our eastern brethren in their replies to questions of a personal nature. I have never known them to give a direct answer to a question pertaining to their families or themselves. When asked how he is, an Arab replies, "Thanks be to God!" When the question is repeated, he says, "God is great!" and if asked the third time, his reply is, "God is bountiful!"

On the sands of the sea, a little beyond the Coptic village, the Pasha of Jerusalem, with a number of his officers and attendants, were jousting and throwing the djerid. They were mounted on spirited horses, drawn up in two lines, facing each other, about 150 yards apart. A single horseman would leave his ranks, cross the intervening space, and ride leisurely along in front of the opposite line, when, selecting his opponent, he quickly threw his djerid, or short, blunted, wooden spear, directly at him. The latter, generally dodging the weapon, immediately started in hot pursuit of his antagonist, who, now unarmed, spurred his horse towards his friends, and, to avoid the threatened blow, threw himself nearly from the steed, hanging by one leg, exactly in the manner of our Blackfoot Indians, and the inhabitants of the Pampas of South America. If the assailed were struck with the first cast, one of his party pursued the assailant; and if successful in striking him, it became his turn to flee from an adversary. It is a manly and a beautiful game, and excited us as we looked upon it. How much more so must it have been to those who were engaged in it! The noble black charger of the Pasha seemed to devour the wind, and not one escaped the unerring aim of his rider. There was no sycophancy, however; for, less successful in retreat than pursuit, the Pasha was repeatedly struck before he regained his place.

Immediately in front of the gate were a number of fruit-sellers, some bazaars, and a new khan under construction, with a throng of people moving rapidly to and fro, indicating more activity of trade than we had seen since leaving Beïrût. Just before entering, we stopped to let a funeral procession pass. It was quite a

long one, and consisted wholly of females. They were wailing in the same monotonous tone as those we saw in a similar procession at Jerusalem. It is the custom for the relatives and friends, for three consecutive days, to repair in procession to, and weep over, the grave of the deceased.

Just within the gate, on the right, is a very handsome fountain, with elaborate carved-work about it. Passing through lines of bazaars, and by a mosque with a large court, and handsome fountain on the right, and thence threading narrow, unpaved streets, cumbered with rubbish, which seemed to have no precise direction, and to lead to no particular place, and twice descending steps where Putnam might have hesitated, with a foe behind him, but down which our horses walked as carefully as we could have done ourselves, we at length reached the residence of our consul, immediately overlooking the harbour. There were some thirty or forty small polacre vessels in the port, which is protected by a reef of rocks to the westward. This reef is generally supposed to be the remains of a breakwater, built by the Emperor Adrian; but to me the reef presented a natural aspect. I could detect no vestiges of an ancient mole, and have not been able to find any historical account of an artificial harbour being formed here. On the contrary, Josephus speaks of the dangers of the anchorage, caused by a number of rocks off the town.

Our worthy consular representative is a Syrian by birth and an Armenian in faith. He was dressed in the oriental style, and received us hospitably and kindly. For upwards of twenty years he has been in the service of our government; in the first place as an assistant, and subsequently as the successor of his father.

Jaffa is, perhaps, the oldest city in the world; and Pliny calls it an antediluvian one. Here, in mythology, Andromeda was chained to a rock, and exposed to the embraces of a sea-monster.

History fixes upon this as the landing-place of the crusaders, subsequently fortified by St. Louis. Within its Armenian convent Napoleon touched the sick infected with the plague, and without its walls massacred his prisoners in cold blood; and here Ibrahim Pasha sought refuge from the Arab tribes, whom he had driven

to desperation. According to tradition, here Noah built the ark, and from its port Jonas embarked; on these shores were landed the cedars of Lebanon, brought for the building of the temple; and in it was the house of Simon the tanner, with whom the first of the apostles dwelt. We visited the site of the last, which is upon the sea-side, exactly accordant with the description. There is a sarcophagus in the yard, used as a reservoir to the fountain. It is said to have belonged to the family of Simon. Quien sabe? Who knows? Who can believe? and who can contradict it? The population of Jaffa is now about 13,000, viz: Turks, 8000; Greeks, 2000; Armenians, 2000; Maronites, 700; and Jews, about 300.

The consul's dinner was an extremely plentiful one, consisting of a great variety of dishes, many of them unknown to us, prepared in the Eastern style. His wife, in compliment to us, for the first time in her life, sat down to a table with strangers. She had a sweet countenance, and her profile was a beautiful one. She was timid, yet dignified in her manners; the wave of her hand was particularly graceful, and her voice soft and gentle, — "an excellent thing in woman." She was dressed richly, according to the fashion of her country. Her head was ornamented with diamonds, in clusters of leaves and flowers; and on her finger was a magnificent ruby encircled with brilliants. When she turned to address those who were waiting behind her, we were particularly struck with the exquisite contour and flexure of her head and throat. A master-artist would have painted her so, and called her the heroine of some historic scene. From time to time, she helped us to morsels from her own plate; a marked compliment, founded on a custom, which, under other circumstances, we should have thought "more honoured in the breach than the observance;" but her manner was so gentle and so winning, and her smile so irresistible, that, had it been physic instead of palatable food, we should have swallowed it without hesitation. For the first time within many months, we felt the soothing and refining influence of the society of the other sex.

Members of the family acted as waiters, it being the custom

when it is intended to pay the highest honour to a guest. Conscious of not deserving it in that sense, we received it as a tribute to the exalted character of our country, and as an evidence of the patriotism of our worthy host;—and a more patriotic, unassuming, and truly hospitable representative of that country I have never seen. He stowed our boats in his warehouse, and placed his country-house at our disposal. His residence in town was our familiar resort, and we ever found a heartfelt welcome at his table. He spared no trouble; hesitated at no expense; and, at the settlement of the accounts, refused all compensation whatever. Mr. Stephens says that he is the only man he has ever known to declare himself happy. I can safely add that he is the only one whom I thought truly so. Many there are who ought to be, but I have never before met with one who rightly appreciated the blessings he enjoyed.

While at dinner, we heard sung in the street the same song of the wild Ta'âmirah, to which we had so often listened on the shores of the Dead Sea. Heretofore invariably discordant, it now sounded almost melodious.

In the afternoon, there was a marriage-procession; the bride being escorted to her future home by her husband and his friends. First came the groom, with a number of his male friends, walking two abreast; then a gorgeous silken canopy, beneath which walked the bride, her person entirely screened. On each side was a man with a drawn sword in his hand, suggesting to the mind thoughts about a lamb led to the sacrifice, or of a criminal conducted to execution. Behind the canopy, in the same order as the men who preceded it, were a number of females of various ages. There were also many attendants with musical instruments. The monotonous twanging sound of the last, mingled with the shouts of the men; the whining tones and occasional screams of the women; and the flourishes of the swords by those who bore them, presented a singular spectacle; a most extraordinary vocal and instrumental concert, with a yet stranger accompaniment.

We learned from our Consul, that the Turks treat their wives very badly. In consequence of the power vested in the husband

to divorce at will, there is no community of interest between man and wife. The latter, not knowing at what moment the dreadful word may be pronounced, is ever laying by something for such a contingency, of which her mother is usually the depository. Hence, the husband, in self-defence, rarely provides groceries or food in any quantity, of which the wife would certainly sell a portion, and retain the proceeds. In the vicinity of towns, therefore, and we have frequently observed it, Turks may be seen returning home with a little oil, and a small quantity of provisions, for the day's consumption.

It is true, that if the wife be divorced for any other cause than infidelity, she can claim her dower,—that is, the sum paid for her by her husband, if it had been returned to him, which is rarely the case. But her youth, and with it, all her attractions, had probably passed away; and what is the most severe part of the infliction, the children, in such an event, remain subject to the father's control. The wife can also obtain divorce; and in Constantinople there is a singular female court to which she may appeal, but its jurisdiction, like the edict with regard to slavery, is nominal, and the rights of woman and the slave are alike disregarded.

All over the world, civilized and savage, women are treated as inferior beings. In what is esteemed refined society, we hold them in mental thraldom, while we exempt them from bodily labour; and, paying a sensual worship to their persons, treat them as pretty playthings.

The law of inheritance, in the Turkish dominions, recognises no right whatever in the female. On the death of the father, if there be one son and one or more daughters, the son inherits all the property. If two or more sons, it is portioned equally among them; but, in either case, the daughters have no share.

On the 5th of June we dined with Dr. Kayat, H. B. M. Consul. The dishes were excellent and most abundant;—among them a lamb, roasted whole—and the attendance was a miracle for Syrian servants. The dress of the hostess, a perfect lady in her manners and appearance, was a singular dovetailing of the

oriental with the European costume. Her hair, flowing beneath her head-dress of cerulean silk, ornamented with crimson and surmounted by a gold-embroidered crown, was internetted with minute spiculæ of gold about the size of a spangle, and fell like the fabulous tiara of a mermaid upon her shoulders. Her neck, at least so much of it as could be seen, for the lady was not slightly moulded, was encircled with a string of golden ornaments in the forms of claws of animals, altogether reminding one of the necklace of a Tuscarora belle. Her fingers sparkled with rings of emerald, ruby and diamond, and an amethystine silk dress, made in the European style, with neat slippers upon the feet, completed her costume. She presided with quiet dignity and becoming grace, and the conversation of the husband gave an additional zest to the repast he had hospitably prepared for us.

It was deliciously cool as we returned after nightfall, by the faint light of the young moon, with the old moon in her arms. Every evening, after sunset, the zodiacal lights were beautiful. Can they, as has been suggested, be the unabsorbed rays of the sun?

I do not purpose entering into a description of Jaffa, or to give the statistical facts which were collected there. The first has been repeatedly done before; the last will, with more propriety, accompany the official report. Moreover, I feel that my notes are diminishing in interest as we recede from those mysterious shores, where we alone were almost the only voyagers. Since our departure from Jerusalem, we have been travelling a route repeatedly and graphically described by others. Any attempt, on my part, to compete with some of them, would be like one endeavouring to rival the lightning of heaven with the artificial fireworks of earth. In consideration, therefore, alike of the patience of the reader and my own reputation, I will henceforth be as brief as possible.

CHAPTER XXII.

FROM JAFFA TO NAZARETH.

Tuesday, June 6. A pleasant, calm morning, with a dense fog to seaward.

When all hands were called, I was amused with the simplicity of an Arab's toilet. He had been sleeping beneath a tree in the court. When awakened, he sprang immediately to his feet, tightened the leathern belt around his āba, and throwing back the flaps of his koofeeyah, he was attired for the day. Except the elder Sherîf, we never saw the Arabs wash anything but their feet, and they regarded our use of the tooth-brush as an absurdity.

At 7 A. M., the land-party, under command of Mr. Dale, started for St. Jean d'Acre. In the evening, I embarked with the remainder in the Arab brig.

The wind drawing too much ahead, we were, near sunset, compelled to anchor again within the outer verge of the harbor.

The finest view of Jaffa is from the sea. The houses are mostly one story, with flat roofs, and being built on an acclivity, the roofs of those on one street form terraces to the houses on the one above it; hence, at sunset, when the inhabitants were assembled on the house-tops to enjoy the breeze, they presented an animated and pleasing appearance. After night-fall, the scene was beautiful; the town rising terrace above terrace, with hundreds of living and moving lights; in front, stretched the sea, with a line of foam where it broke against the reef, and a young, but bright, unclouded moon above it.

Sailed again at 8 P. M.; the wind very light. When I awoke, at 2 A. M., the brig was gently moving, unrestrained by human guidance. The sheets were hauled aft; the helm lashed alee, and the Reis and his crew were fast asleep. The moon had gone down, and the stars shone lustrous through the humid atmosphere.

Behind us, but a few miles distant, was Jaffa, dark and still as

a city of the dead. To the left, was the broad expanse of sea, arched over by an unclouded sky. On the right, was a waving line of coast, defined by the uncrested waves, as they lazily tumbled and broke against it with a monotonous, but refreshing sound. Beyond, was a line of barren sand-hills, terminated by cliffs in the remote distance. To the careless eye and unreflecting mind, an unattractive and a dreary scene! But, in truth, how teeming with association, and with food for thought! Over those barren sand-hills, were the sites of Gilgal and Antipatris; and to the north, that seeming line of cliffs was Cæsarea, built (or rebuilt) by Herod, and named after his imperial master. Thence, St. Paul departed on his way to Rome. Some centuries later, this very shore presented another and a less quiet scene,—when the battle raged upon its sands, and Christian and Infidel hosts rent the air with shouts of defiance. To the west, across the sea, lay our home, the resting-place of all our earthly ties; and to the east, beyond the line of hills which skirts the horizon, were the consecrated scenes in the life of Him, in whom should be centred all our future hopes.

Early in the morning, the sea-breeze sprung up, and making a speedy passage, we anchored off St. Jean d'Acre, about an hour after the gates were closed, and had, consequently, to remain all night on board.

The route of the land party was along the sea shore, with an occasional detour to the right. The beach was covered with a profusion of shells, of a yellow colour near the sea, but blanched white a short distance up, which, with a harsh, discordant sound, crushed and crumbled beneath the horses' feet.

Passing the ruins of Apollonia and Cæsarea, and the thriving village of Tantûra, they were near Castellum Perigrinorum, when Charles Homer, seaman, was wounded by the accidental discharge of a gun. The load of twelve buck-shot entered the under part of the arm near the wrist, and came out on the upper side below the elbow, lacerating the arm dreadfully, and, as it afterwards proved, shattering one of the bones. The severed artery discharged dark arterial blood in frightful jets, and the

wounded man suffered excruciating agony. With great difficulty, Mr. Bedlow checked the bleeding, and the poor fellow was slowly conveyed to the ruined castle. Fortunately there were some feluccas in the harbour, and under charge of Mr. B. he was immediately embarked in one of them for Acre. The wind was fair and fresh, and in six hours they reached their destination. Homer was immediately taken to the consul's house, and a surgeon in the Turkish army, who had been educated in Ibrahim Pasha's medical school in Egypt, dressed the wound. I dreaded, however, the heat of the climate, and felt it my duty to procure for the unfortunate man the most comfortable quarters and the very best surgical attendance. I therefore sent him, the same evening, to Beïrût, under charge of Passed Midshipman Aulick, Mr. Bedlow, and three men.

The carriage-trucks, and all our effects sent back from Tiberias, were also embarked in the brig. On their arrival, Homer was without delay placed under the care of the Sisters of Charity, and a French surgeon of eminence attended him daily. The only time that I have ever been addressed by an Arab female, was, when one inquired about the condition of the wounded sailor. Humanity, a lovely tenant, dwell where it may, has its peculiar and appropriate home in the female breast.

At Acre, on the morning of the 9th, we had a visit from Sherîf and 'Akīl, who came in state, and we accepted an invitation to breakfast with them. Going into the town, we saw a man in the fosse of the ramparts, digging for bullets expended in various sieges of the place. He had found a number of them, two feet below the surface.

On repairing to the Sherîf's, a little after noon, we were ushered, through a paved court, into a large room, with a lofty, arched ceiling; Persian mats were upon the floor; a handsome divan at one end, and at the other a *European bedstead with chintz curtains*, and costly weapons were hanging against the walls. Nubian slaves were in immediate attendance, with sherbet, pipes, and coffee; shortly after which, followed the repast. It consisted of a great many dishes, of Arab cookery, and was served up in an

immense circular brazen tray. Among other things, there was a lamb, roasted whole, which 'Akīl tore apart and distributed with his hands. We had learned not to consider knives and forks as indispensable; and, being hungry, made, tooth and nail, a hearty meal. In ten minutes, the exercises were over; and, with a lavation and a pipe, the entertainment concluded.

Saturday, June 10. After taking some observations to connect with preceding ones, we started for Nazareth, via the Valley of the Winds, the first encampment of our previous march. The aspect of the country was far more parched and dry than when we first saw it; the plain was embrowned by the sun, and the air filled with myriads of insects, the product of the already decaying vegetation. At 11.45, reached the former camping-place, and stopped to make renewed observations. To our deep regret, we here discovered the delicate boiling-water apparatus, for determining elevations, to be broken, notwithstanding all our care. The horses were exceedingly restive from the heat and the bites of insects, coming across the wide plain of Acre, and to that I attributed the unfortunate accident. We here gathered a few flowers, which, the offspring of a more mature season, were gaudy in their colouring, but less redolent of fragrance, than those which bloomed around us on our previous visit. From the heat of the climate, vegetation germinates, matures, decays, and revivifies, with great rapidity. The poetical figure is an approximation to the truth:—

"The Syrian flower
Buds, and blooms, and withers, in an hour."

Starting again, and, diverging from the route before pursued, we stopped at Sepphori to examine the ruins of a church with pointed arches, apparently of the time of the crusades. At 4 P. M., came in sight of Nazareth, seated at the head of Wady Hadj (Valley of the Pilgrims), which, through the Wady el Kafyeh (Ravine of the Leap), communicates with the great valley of Esdraelon. Leaving the Greek Church of the Annunciation on our left, we skirted the eastern slope of the mountain, and, descending through the outskirts of the town, camped, where so

many travellers had camped before, in an olive-grove, about eighty yards from the Fountain of the Virgin. There were a great many women and children around the fountain; the children, sprightly, with intelligent features; and the women, the most cleanly in their attire, and the most courteous in their manners, of any we had seen in Syria.

Sunday, June 11. We visited the Franciscan Convent, and its church, containing the grotto of the Annunciation. We were also taken to the reputed workshop of St. Joseph; to the place where our Saviour dined with his disciples, and to the precipice whither he was led by the Jews.

The feelings are inexpressible which overpower one in passing to and fro amid scenes which, for the greater portion of his mortal existence, were frequented by our Saviour. In Jerusalem, the theatre of his humilitations, his sufferings, and his death, the heart is oppressed with awe and anguish; but in Nazareth, where he spent his infancy, his youth, and his early manhood, we yearn towards him unchilled by awe, and unstricken by horror.

In its secluded position, with a narrow valley before it, and mountains in every other direction, we liked Nazareth better even than Bethlehem, and thought it the prettiest place we had seen in Palestine. The streets were perfectly quiet; there was an air of comfort about the houses, and the people were better dressed, and far more civil, than any we had encountered.

Nazareth contains about 5000 inhabitants, four-fifths Christians, the remainder Muslims. It has twenty-two villages in its district, which is subordinate to the Pashalic of Acre. While here, we paid a visit to a Turkish tax-gatherer, who, from his books, furnished us with much statistical information with regard to the tenure and the cultivation of land, and the land-tax, the poll-tax, and the "kharaje," or blood-tax, paid by the Christians. This tax-gatherer was an Egyptian, with a dark complexion, and short, crisp, black hair; his wife, a native of Aleppo, in the north of Syria, had a white skin, and chesnut ringlets; and their servant woman was a Maronite of Mount Lebanon, with high cheek-bones, a freckled face, and reddish-brown hair.

Napoleon stopped at Nazareth after having rescued General Kleber in his desperate engagement with the Syrian army, in the plain of Esdraelon, about two hours distant.

We found here the heliotrope, the pink, the pheasant's eye, and the knotty hartswort. The roots and seeds of the latter are medicinal, having similar properties to those of the carrot. The Turks are said to eat the young shoots as a salad.

CHAPTER XXIII.

FROM NAZARETH TO THE SOURCE OF THE JORDAN.

Monday, June 12. Started for Mount Tabor, bearing about E. S. E., leaving Cana on the left. There were many oak-trees on the hill-sides and in the ravines, but no cultivation and very few flowers, except the purple bloom of the thorn. Bearing a little to the south, we soon opened the extensive and beautiful plain of Esdraelon. Over the plain was the village of Nain, where the widow's son was restored to life. Skirting along the northern edge of the lovely plain, nearly hemmed in by lofty hills, and cultivated in patches, with here and there a village; passing the battle-field of the French, and the reputed spot where Deborah and Barak discomfited Sisera, we reached a village at the base, and ascended to the summit of Mount Tabor; the sloping sides, two-thirds up, thickly dotted with oak-trees, and beautified by many white and yellow flowers. Near the top, were remains of ancient walls and fortifications; and on the flattened summit were six or eight acres in wheat, being harvested by male and female fellahin, whose homes were in the village below. All around were ruins, many of cut stone, without mortar, the loftiest fragment being part of a pedestal with sculptured plinths. There were several cisterns and arched vaults on the southern side of the flattened summit. This is the reputed Mount of Transfiguration, and one of those vaults answers annually the purpose of a chapel.

From the summit was a magnificent view of the plain of Esdraelon, stretching to the range of Carmel in the west, and to Mount Gilboa in the south, with its off-shoot, the plain of Jezrael, reaching east to the Jordan. To the north-west, was Nazareth, embosomed among the hills; to the north-east, the Sea of Galilee, with Safed and the snowy peak of Mount Hermon. To the south-east, in the plain, was the village of Endor; to the south-west, was little Mount Hermon, crowned with a ruined mosque, which glittered in the sunlight; and there were two streams from the north, and one from the southward and westward, which, uniting under the south-east base of the mountain, flowed along the plain, and fell into the Jordan near Beisan. A chapter might be written upon the history and associations of Mount Tabor, and its circumjacent plain.

Descending the mount, the road led over rocky ridges, and across barren ravines, when we came upon several large encampments of black tents, with much cultivation, and many cattle and sheep around them. In the fields were dhoura, wheat, (the last being harvested), and some patches of castor-bean, which is raised for lamp-oil. The uncultivated parts of the rolling plain abounded with the khob (wild artichoke), bearing a large, round, beautiful purple flower, resembling the lilac in its hue, and partaking of the fragrance of the thyme.

Soon after, we passed two ruined villages. Just below the last one, was a deserted garden, with apricot and fig trees. No one reclined in the grateful shade of the fruit-trees; and the song of a mother, and the mimic shouts of children, which once echoed around them, were no longer heard. It is not difficult to surmise the fate of the family—the father killed—the mother and the children driven forth—helpless wanderers. A few months back, and this was probably the seat of domestic happiness; but now the plaintive cooing of the dove by day, and the mournful whooping of the owl at night, are the only sounds which find an echo in that desolate spot.

Coming to the summit overlooking the Sea of Galilee, and the Jordan, where it issued from it, we descended to the bank, and

halted near our first camping-place on the river, beside the ruined bridge of Semakh. Bathed, for the last time, in the lower Jordan, and gathered some flowers and shells, memorials of the consecrated stream and its lovely banks. From the want of wood, we went nearly supperless to bed.

Tuesday, June 13. We had been compelled, last night, to pitch our tents in a field of wheat newly cut. When about to start, this morning, I sent to some reapers in the adjoining field to pay the owner of the one we had occupied for the slight damage we had occasioned. He came slowly and with hesitation, and appeared perfectly astonished when he understood our object. The idea of remuneration for waste of another's property never occurring to this harassed and misgoverned people.

Our course to-day was along the western shore of the lake. Passing the ruins of Tarrichæa and of Kades, we stopped to bathe in the hot bath of Emmaus. The shore of the lake was in many places fringed with the pink oleander, and we saw a beautiful violet-coloured flower, as round and as large as a small apple, growing on a thorn-like bush. We met a Jewish silversmith going from Tiberias to the Hauran, to supply the wives and daughters of the Arabs with trinkets; thus combining thrift with the preservation of health, he will spend the sultry months of summer in the mountains.

At 9.30, we passed the gate of Tiberias; a few persons on the crumbled walls. The ground, except a few irrigated patches, was parched and dry, and there was much grain being trodden out by cattle and mules.

When here in April, we purchased the only boat upon the lake, with the condition that another should be procured by the 1st of June—an arrangement we were induced to make in the event of losing our boats or being unable to return with them. To our great regret, we now learned that the one being built on the sea-coast would not be delivered for two weeks, a delay prohibited by the advancing season and our enfeebled condition. Thus fell our hopes of thoroughly exploring this inland sea. It could not have been done when we were there before, without incurring great risk of failure in the main objects of the expedition.

Resting a short while near Mejdel (Magdala), our road ran parallel with the sea-shore, with the luxuriant but uncultivated plain of Chinnereth on our left, and the holy city of Safed and Mount Hermon towering before us. Upon this plain it is supposed that Chorazin and other towns mentioned in the New Testament were situated.

Early in the afternoon, we arrived at the debouchure of the upper Jordan. Flowing through an extensive and fertile plain, the river pours itself in a wide and shallow stream into the sea, nearly at its north-east extremity.

Upon the western shore, near the mouth of the river, were many tents of the tribe El Batiheh. A number of these were constructed of wattled cane, giving free access to the air, and, from their diminutive size, more resembled cages for beasts than human habitations. Much of the plain had been under cultivation, but the harvest was over, and the fields were blackened from the burning of the stubble. We encamped on the western bank, about half a mile up the stream, to avoid the near vicinity of the Arabs, this tribe having a bad reputation. Across the river on the first spur of the hills which bound the plain in that direction, is a village, the reputed site of Bethsaida. The river ran in front of the camp, about ten paces distant, and in the rear and on one side, as well as along the bank, were a great many oleanders in full bloom. This day there were very many oleanders along the sea-shore, and in some places the road passed through groves of them, but we did not meet the aromatic shrub mentioned by Strabo. The purple flower I have before mentioned was frequent. The day had been oppressively hot, and as soon as the observations of Polaris were taken, we retired—but not to sleep—for we were dreadfully tormented by mosquitoes and fleas. A marauding band of Arabs was reported to be in the neighbourhood, but we were unmolested.

Starting early on the 14th, the road led at first through a morass intersected by several streams and numerous ditches, and covered with a tangled growth of shrubbery. Bethsaida, the birth-place of Peter, Andrew, and Philip, in full sight to the

north-east. We soon began to ascend, clambering up the western hills, the river becoming rapid, brawling and more contracted in its width—its banks fringed with the cane, the willow, and the oleander, the last in great profusion, its delicate pink hue contrasting well with the light and dark green of the other vegetation. After a toilsome ascent of an hour, we reached the summit of the hill overlooking the plain. From it was a fine view of the Sea of Galilee and the Jordan, the latter rushing down in one line of foam fringed with willows, oleanders, and the ghŭrrah of the lower Ghor. Thence descending and ascending the sides of a deep ravine, we reached the highest elevation, whence the face of the country breaks down towards lake Huleh. Thus far from the head of the plain, the river had been a perfect torrent. Mount Hermon soon came into view, its brow seamed with lines of snow, which were fast disappearing beneath the sun of a Syrian summer. Passing a reservoir and a ruined khan, we came at noon to Jisr benât Ya'kôb (Jacob's daughter's Bridge), with four arches.

Above the bridge, the river, about forty yards wide, and full to the utmost capacity of its banks, flowed in nearly a due south course, through a narrow plain. Our road led parallel with the river, until we opened on a yet more extensive plain, with the lake on its eastern side. This plain was under partial cultivation; there were two villages (one in ruins) near the centre, and many Arab encampments scattered about,—the men smoking in the tents, while the women, with uncovered heads, were at work in the broiling sun. This lake is the Merom of the Bible, and upon this plain, Joshua overthrew the Canaanites.

In the afternoon, our course led along the western edge of the plain, between the lake and the mountains. The plain seemed perfectly level to the eye; and there were two streams running down its northern end, which, with the numerous fountains, render it very fertile. There were many encampments of the fellahin, who cultivate rice and dhoura. The tents were of cane wicker-work, with upright sides, and more comfortable than any we had seen. The hills on the left formed a lofty range of swell-

ing domes, terminating to the north in an abrupt perpendicular face of horizontal strata,—the prevailing rock, limestone. Sweeping round the head of the plain to the north-east, we ascended to an elevated plateau, and camped on the banks of the Golden Stream, a tributary of the river of Bânias, one of the sources of the Jordan.

Starting early on the 15th, in two hours, we crossed a fine old Roman bridge, with its three arches, spanning the river Hâsbeiya (the true Jordan), which, far below, swept through with great velocity, its rushing and tumbling waters darkened with fragments of rock peering above the eddying whirls of foam.

In one hour more, we came to Tell el Kadi (Hill of the Judge), the site of ancient Dan, and the Laish of the Canaanites, "the utmost border northwards of the land of Israel," and where Jeroboam placed one of his golden calves. It is an oblong hill, with swelling sides and a flattened summit, about eighty feet above the plain. Over the crest is a hollow, where the fountain bubbles up. There was much tufa, and some quartz, and the whole hill bore traces of volcanic characters.

On the west side, a short distance from the fountain, a stream, or rather many streams, gushed out so copiously from the hill-side as, in an instant, to form a river; the water clear, sweet, and cool. This was long supposed to be the highest source of the Jordan, and from it the name is said to have been derived. The only objection of many to the derivation is that is too simple. The Hebrew words Jor and Dan, as rendered in our language, mean River and Judge. Dan, in Hebrew, being the same as Kadi in Arabic. To this place, as related in Genesis, Abraham pursued the kings.

Thence to Bânias (Cesarea Philippi), the road led, in nearly an easterly direction, through a beautiful country, with numerous clumps of trees, mostly oak, and many coy flowers, peeping out from the tufted grass.

Stopping to rest, a few moments, under a majestic oak, on a raised platform, encircled three feet high by a wall of fluted and chiselled blocks of marble, we proceeded to the cave, beneath

which, it is said, flows the stream we had crossed, which finds an outlet farther down. The cave was dry, but, in places, bore marks of recent water. We were assured that, in the rainy season, it is nearly filled. It no doubt communicates through a fissure, with one gorge or more in the mountain above. In the face of the rock, above and beside the cave, were niches, supposed to have been occupied by statues of Pan and several nymphs. There is a fabulous legend of the true source of this stream being Lake Phiala, a short distance to the south-east of the town. Josephus states that "Philip the Tetrarch cast straw into the lake, which came out again at Panion, which, till that time, was taken for the head of the Jordan." To this place our Saviour came from Bethsaida.

From Bânias we pursued a north-west course, the country rolling; the soil, like that of yesterday, red clay, with a substratum of limestone, which occasionally cropped out. At first there was much cultivation, and a great many people harvesting; their complexions much lighter than those of the dwellers in the plain. The women wore petticoats and aprons; and, when first seen, there was a general shout along the line—"hurrah for civilization!" We soon came upon stone fences, and other marks of a more secure tenure of property; and the people were courteous; saluting and returning the salutations of strangers. In saluting, they placed the right hand upon the breast. We were once more among Christians.

The road led over two high mountain-ridges and down into a rolling plain, with fields of dhoura, beans, and houma, and across the Hâsbeiya (true Jordan), by a bridge at Khan Suleil. It meandered along the valley, which narrowed as we advanced, and led through groves of olive and some poplars, and by fields of grain, in sight of several villages. Turning to the south, and then crossing the river again at a ford, and rounding to the east, we clambered the steep Wady et Teim, along a most execrable road. It is said that the mountaineers, to increase their security, purposely render their roads almost impassable. We soon opened the town of Hâsbeiya, seated far up on the crest of

the right acclivity, its castle and a minaret conspicuous, and camped on a ledge, in an olive-grove, about one-third up from the bed of the ravine.

There were groves of olive, mulberry, and fig, and some apricot trees on each side of the ravine, from its head as far down as we could see. On the cliffs behind us were many scattered oaks, with here and there an orchard and a dwelling. The rich cultivation extended from the head of the ravine far up to a village on the mountain-side, which was, in turn, overlooked by the snow-capped crest of Mount Hermon.

From extreme weariness, we could not leave the tents the day after our arrival, even to visit the town, but impatiently awaited intelligence from our wounded comrade; intending, if his life were in danger, to hasten to him.

On the 16th, we received a great many visitors, and obtained much information from some of the most intelligent. There are 1500 who pay poll-tax in the town; and as it is only paid by able-bodied men, over twenty-one and under forty years of age, there must be near 9000 inhabitants in Hâsbeiya, of whom two-thirds are Christians, mostly of the Greek persuasion. The Protestants number fifty-five; the Maronites, fifty; the Greek Catholics, thirty; and there are a few Jews. There was great religious discord here: the members of the Greek church being prohibited from speaking to, or holding any communication with, the Protestants. The governor was under the influence of the Greeks, it was asserted, from mercenary considerations; but the rest of the Muslims, as well as the Druses, were free from intolerance, and seemed disposed to favour the persecuted. Freedom of religious worship was denied to the Protestants, and we were indignant witnesses of the persecutions to which they were subjected.

We are, mercifully, so framed as to depend upon association with each other, to relieve necessities, to enhance enjoyments, and to maintain security. Peace, therefore, and harmony, unity and benevolence, is the proper condition of the human family; without which, man but cumbers the earth he should adorn; and, in his abasement, deeply feels the abiding curse of Ishmael,—

"thy hand is against every man, and every man's hand against thee."

Of all the embittered feelings of the human heart, there are none so detestable as those engendered by fanaticism. Of all the human family, there is not one so malevolent and so fiendish as the sour and self-sufficient bigot, who, catching a brand from the altar of Moloch, lights the fires of persecution, and perverting, with infamous audacity, the mild breathings of the sacred volume into lessons of cruelty and proscription, becomes the foe of his fellow-man and the mocker of his august Creator. The persecuted have our warmest sympathies.

In the afternoon, Prince Ali called upon us. He is of the family of Shehab, which came in with Saladin, and is the oldest in Syria. We accompanied him to the source of the Jordan. Descending the ravine, and turning to the north, we passed through groves of olive, fig, and mulberry trees, and crossed the river over a one-arched bridge; the banks lined with willow and plane trees, and luxuriantly fertile. Thence going east, in ten minutes we came suddenly to the source, a bold, perpendicular rock, from beneath which, the river gushed copious, translucent, and cool, and flowed in two rectangular streams, one to the north-east, the other to the north-west. The scarp of the rock was about forty feet high; and the north-east branch, being mere back-water, extended only a few hundred yards; but its banks were fringed with the wild rose, the white and pink oleander, and the clematis orientalis, or oriental virgin's bower. The north-west branch, at the distance of about a hundred yards, plunged over a dam, and went rushing through the arch of the bridge below. The hand of art could not have improved the scene. The gigantic rock, all majesty, above; its banks, enamelled with beauty and fragrance, all loveliness, beneath; render it a fitting fountain-head of a stream which was destined to lave the immaculate body of the Redeemer of the world.

While here, our observation confirmed the accounts given us of the wonderful product of terrace cultivation, but I will not cumber my already extended narrative with statistics.

On the 17th, Mr. Dale and myself visited the valley of the Bŭk'ah, This rolling valley is hemmed in by the two parallel ridges of Lebanon and Anti-Lebanon. The latter skirts it on the east, the former upon the west. Like the waving backs of huge monsters, whose bodies are prostrate but their heads erect, their summits stretch in ascending lines to the north till they terminate in two crowning peaks, Ghebel es Sheikh and Ghebel Sŭnnîn, each capped and ribbed with snow. The Litany ran here close against the Lebanon range, the stream visible here and there, far down the steep chasm.

Descending, with great difficulty, we came upon the river where it flowed impetuously beneath a natural bridge, — an arch excavated, by the water, through the opposing mass of rock. The reverberating noise beyond soon told of its reappearance; and, clambering along and down the precipice, we saw it issuing gently, at first, from its subterranean chasm, its banks fringed with the willow and the plane tree, and decked with flowers of the richest hue. The stream thence flowed with increasing velocity, for about 200 yards, between a high, naked rock on one side, and a luxuriant growth of overhanging plane-trees on the other, when, whirling suddenly to the right, and again to the left, it gathered its tumultuous waters, and, rushing in a narrow but impetuous cascade into a circular basin, it thence leaped twenty feet into a foaming caldron. The rays of the sun were reflected in rain-bow hues, as they fell upon the long line of foam, which sparkled and glittered among the trees, whose branches almost intertwined above, and nearly overshadowed the stream that rushed so madly beneath. If the site of the grove of Daphne were upon this stream instead of the Orontes, here, no doubt, would have been the favoured spot.

We here gathered the althea, the retem, or broom-plant, the dianthus, or pink, and the snap-dragon.

With the exception of those of the highest class among the Turks, all the females of the town came indiscriminately to the fountain in the ravine for water. Each one carried a large jar, some upon the head, but most upon the back of the neck, between

the shoulders. While here, we saw the wives and daughters of Christians (Protestants and Greeks), Druses and Turks, among them the married daughter of the richest man in town, pass, at all hours of the day, to and from the fountain.

The transition from a severely active life in the plains to a wholly inactive one in an elevated region proved very trying, and we waited impatiently for intelligence from our comrade. Not hearing on Sunday, I, that evening, despatched a messenger to Beïrût.

CHAPTER XXIV.

FROM THE SOURCE OF THE JORDAN TO DAMASCUS, BA'ALBEK, AND BEÏRÛT.

Receiving, on Monday, the joyful intelligence that Homer was out of danger, and that Mr. Aulick and Mr. Bedlow were on the way to rejoin us, I determined to remain no longer inactive; and, early on the 19th, started to lead the party over the Anti-Lebanon into the plain of Damascus.

Clambering diagonally up the mountain-side, which was beautifully terraced, and clothed with vineyards and olive and mulberry orchards, we passed two Druse villages, and a silk-mill, near a cave, which was filled with water, and contained crypts and sarcophagi.

The cultivation gradually disappeared as we ascended, and was succeeded by dwarf oaks, with some large ones in the hollows, and in sheltered places; there were several streams trickling down the mountain side. Near the streams was some grass, and on their banks, and upon the mountain-slope, we observed the oleander, the convolvulus, the pink-flowered valerian, and the retem or broom-plant, the last covered with its straw-coloured and fragrant blossoms. The oak was succeeded by heath and fern, the last beautiful with its small, scarlet blossom; then suc-

ceeded lichens and moss, terminating in masses of limestone-rock, with boulders of quartz. We crossed, in a gorge (the Wistanee), between Mount Hermon and the next peak to the southward. The two crests were covered and many clefts on both sides filled with snow. From the summit, the country below, which had seemed so mountainous to the upward view, appeared an immense rolling plain. Far to the north-west, at the verge of the seeming plain, were the red sands, a dazzling line of gold, separating the luxuriant green of the plain from the light azure of the far-stretching sea. Upon that line of sand, like clustering dots upon a chart, were the cities of Tyre, Sidon, and Beïrût. Another plain stretched, from the opposite side, south to the Hauran, and to the east until it was lost in the great desert. On the northern margin of that plain, but yet in the far distance, lay the city of Damascus, Es Shâm! (the Holy!) embosomed in groves and meadows. As we ascended, we suffered from a stricture about the temples, but nearer the summit, the feeling passed away, and was succeeded by great nervous exhilaration.

We found snow some distance down the eastern slope; and the descent was gradual; but, from the nature of the road, very slow and excessively fatiguing. As we descended, the limestone rock disappeared, giving place to sand-stone and trap; and, lower down, serpentine occasionally cropped out. Near the base of the mountain, there was a profusion of wild roses.

The next day, the road led over a high, rolling plain, along the flank of the mountain, which, ribbed and capped with snow, formed a bleak barrier to the west. Ahead was a sea of verdure, which indicated the gardens around Damascus. There is an unfounded legend that Muhammed refused to enter that terrestrial paradise. Advancing into cultivation, there were patches of wheat and barley on the high ground; and, in the ravines, groves of olives, figs, apricots, English walnuts, and some melons and cucumbers. The prevailing rock, a dark basalt, with metallic veins, and some quartz. As we proceeded, the number of villages increased, each with its girdle of vegetation; an oasis in the wide-spread and arid desert. Occasionally the wind, sweep-

ing down the gorges of the mountains, would whirl the dust of the incinerated plain in circling eddies, high in air, very much like our water-spouts at sea. There were some camels moving about in search of food; but there were few people, and no birds or wild animals:—a long, dreary ride over the dry plain, under a burning sun. I had brought the party down from the mountain, where the air was too keen for our debilitated condition;—here there was a prospect of the other extreme, and that the weather would prove hot and relaxing.

In the heat of the day, the whole plain seemed to undulate, and the ascending vapour formed a perfect mirage, through which, like light-houses above the sea, the minarets of the villages were alone visible. We passed through the populous village of Kattana, and a most extensive olive orchard—and with the suburb town of Sâlihîyeh on a slope of the mountain to the left, and on the right a long line of vegetation indicating the course of the river until it was lost in the desert; and Damascus, unseen though near, before us; we pressed forward as rapidly as our strength and that of our steeds permitted. The road led through avenues of large walnut trees, the blossoms nipped by frost. For miles the way was lined with walls composed of sun-dried blocks of mud, intermixed with pebbles, each about three feet high, four feet long, and one foot thick, larger, but in every other respect very much like the adobes of Mexico. This climate is said to be very cold in winter. It can only be so by contrast with the heat of summer, for much frost would crumble these walls in a single season. Within the lines of walnut trees there were orchards of olives and apricots, and patches of wheat, barley, melons, and leguminous plants. The road ran winding among these delicious gardens, with a rapid stream always on one and generally on both sides, and to which, through each garden there flowed a brawling tributary. After the poetic Lamartine and the graphic Miss Martineau, it would be folly to attempt a description of Damascus. I therefore simply transcribe what fell under our observation.

At 4 P. M., we were abreast of Bab el Karrawat (Gate of the

Aqueduct), and turning to the left along the Grecian aqueduct, we came upon a beautiful green, level as a meadow, through the centre of which flows the far-famed Barada, formed by the union of two streams above, which are supposed to have been the Parphar and the Abana, rivers of Damascus, mentioned by Naaman the Syrian.

Crossing the bridge which spanned the Barada, we turned to the east, and skirting the northern wall, passed through a cemetery, many of the tombs in which were enclosed in wooden lattice work with bouquets of flowers suspended within, and many women moving about among them. We next passed a house enclosing the tomb of a santon, with numerous placards affixed to it, whither the afflicted or their friends come to pray for recovery from sickness. Very soon after we encountered a fellow-country-man, and our Vice-Consul, a Syrian Jew. By them we were conducted through Bab es Salem (Gate of Peace) to the quarters that had been provided for us. Before entering the city, we were advised to furl our flag, with the assurance that no foreign one had ever been tolerated within the walls; that the British Consul's had been torn down on the first attempt to raise it, and that the appearance of ours would excite commotion, and perhaps lead to serious consequences. But we had carried it to every place we had visited, and, determining to take our chances with it, we kept it flying. Many angry comments were, I believe, made by the populace; but, as we did not understand what our Toorgeman was too wary to interpret, we passed unmolested.

Our quarters consisted of a bower, about eighty by twenty feet, a small fountain at one end, and a large reservoir at the other, with a miniature canal between; a grotto-like recess, with a divan, which was assigned to the sailors, and a large room, with a dais and a jet d'eau in a circular basin—called, by the Jews, "a sea"—for ourselves. The last gave us the first correct idea of the "Brazen Sea" of Solomon.

On our way around the walls, we had seen many light-coloured pigeons, with fan-tails; and in this garden were ravens of a fawn colour, with black head, wings, tail, and feet,—which contradicts

mythology; for we are there told that the plumage of this bird was originally white, but that Apollo turned it *all* black, because it misinformed him of the infidelity of Coronis.

The windows of our apartments looked upon the Barada, which flowed immediately beneath them, between two tiny cataracts. On the opposite bank, was a large rural and crowded café, perfectly embowered in a grove of magnificent plane-trees. It was a lively and most attractive sight. There were Turks, Greeks, Arabs, and Syrians, in various costumes, supinely sipping coffee or smoking in groups or apart, or attending to the recital of a tale; and on one side a crowd was gathered, listening to a musician, and looking upon the feats of a tight-rope dancer, whose figure was at times half concealed from us by the intervening branches. As the day waned, numerous little coloured lamps, suspended in every direction about the trees, were lighted up, which shone beautifully amid the dark green foliage.

This scene so excited our curiosity, from the idea it conveyed of a social hilarity which we had never before witnessed in our intercourse among Asiatics, that, wearied as we were, we determined to sally forth. On our way, through the dark, narrow, and crooked streets, we frequently stumbled over sleeping dogs. These animals were by no means vicious, but would howl when trodden upon, and lazily get out of the way. They were more numerous than in Constantinople; and we were told that they perform the office of scavengers, and are, moreover, supported by charitable contribution.

While making our way through a crowded bazaar, a Turk, in passing, elevated his hands above his head. We did not at the time understand it, but learned afterwards, that formerly it was an enforced custom for Christians to keep the centre of the street, which is nothing more than a gutter, while the Muslims passed along the elevated side-walk. The Turk, on this occasion, not being so tall as the member of our party next to him, his gesture was intended as a kind of assertion of superiority.

The bazaars were covered in, and the shops in those appropriated to merchandise were closed; but there were a great many

cafés, not confined to houses, but each one embracing a considerable space of the street before it. There were lines drawn across, some ten feet above the pavement, to which were suspended hundreds of little lamps, under which, on broad benches and low stools, squatted and sat those visitors who preferred the sensual indulgence of coffee and the chibouque; while those whose tastes were more intellectual, listened silently within, as one read or related some tale of the East. The scene brought the days of our boyhood back, and we remembered the Arabian Nights,—Haroun al Raschid, and his excursions in disguise.

Early the next morning, went to a bath, passing on the way the court of the great mosque, once the Christian church of St. John. Many of the streets were so narrow, that the projecting balconies often touched the walls of the houses opposite. The bath was very much like those of Constantinople, but more elaborate in its decorations, and the process of ablution was more prolonged and complex. The building was ornamented in the Chinese style. The interior of the dome-roof was painted sky-blue, and the walls were in fresco, of Chinese scenery. There were pagodas six stories high, with grotesque ornaments on the top, and trees and flowers nearly as high as the pagodas. There were elevated divans around the rotunda, and two recesses, fitted in like manner, sufficiently large to accommodate about sixty people. These recesses led off to apartments with dome-roofs, studded with circular glass-lights, and having marble floors and fountains, and alabaster reservoirs. We were led into one upon wooden clogs, three or four inches high,—for the floors were heated from beneath,—and made to sit down by one of the fountains which supplied hot and cold water in unlimited profusion, and the whole apartment was filled with a hot and almost stifling vapour. After being parboiled, the scarf-skin of the whole body was scraped off with horse-hair gloves, by yellow imps with shaven crowns, nearly as naked as ourselves. We were afterwards conducted into a room of yet higher temperature, where we were boiled a little more, lathered, and thoroughly washed off We were then enveloped in napkins, a capacious turban was wreathed around

our heads, and, almost exhausted and panting for a less rarefied air, were slowly supported to the outer room, where we reclined upon luxurious couches, and, at will, sipped coffee or sherbet, or smoked the aromatic chibouque.

Friday, June 23. A close, warm day, but the air was much refreshed by the play of the fountains, which sounded like gentle rain, and mingling with the gush of the river, lulled us to sleep at night.

In the cool of the evening, we went without the walls. Passing through the east gate, consisting of a large central one, and two side ones now blocked up, we had, from without, a fine view of the city and its suburbs.

Near the Jerusalem gate, we were shown the place where St. Paul was let down in a basket, and, on the road beyond, the spot of his conversion; and, on our return, we passed through "the street which is called Straight."

This country is the cradle of the human race; and Damascus is certainly one of the oldest cities in the world. Its name is said to imply "the blood of the righteous;" derived, it is supposed from the death of Abel. Eleazar, the steward of Abraham, was from Damascus: and about half an hour beyond it, is Hobah of the Old Testament, whither the patriarch followed to rescue Lot from his captors.

The history of this city teems with vicissitudes. Persians, Greeks, Romans, and Saracens, have been here; and there are ruins, and vestiges of ruins, which would delight an antiquarian.

On Saturday, the Jewish Sabbath, we were taken to some houses of wealthy Jews. The exteriors of the dwellings were unpretending and semi-dilapidated; and the entrances were uncleanly, and, in some instances, almost filthy. A narrow, crooked way led to an open court, paved with marble, with a marble fountain and shrubs and flowering plants in the centre, and lofty, spacious, and elaborately-decorated rooms and alcoves around it. At the farther end of each room, was the elevated dais, with divans of costliest silk cushions on the three sides, and Persian carpets between them. From the dais to the opposite end of the

room, was a floor of tessellated marble, with an overflowing reservoir, or "sea," supplied by a jet d'eau. The door and windows opened upon the court; and the walls, wainscoting, door and window-frames, and the lofty ceiling, were of mosaic, of different kinds of costly wood, with rich gilt edgings and arabesque figures.

There were neither tables nor chairs; and, in the sleeping apartments, the beds consisted of thick cushions piled upon each other. The men were dressed in black turbans and gaberdines; the wives and daughters, in narrow-skirted gowns, usually of English printed muslin; and a silk boddice, generally yellow, fitting closely to the form—except that, opening and diverging in front, they displayed a thin, white gauze across the breast; which, in consequence of the pressure beneath, protruded forth and presented a most disgusting appearance. The married women sedulously concealed their own, but wore a quantity of artificial hair confined by a net-work cap, ornamented with gold coins, pearls, and precious stones. The unmarried wore their own hair, uncovered and unadorned. The eye-brows were shaved; and over each eye was a black, curved line, extending from the outer corner and meeting in the centre, at the bridge of the nose. The lower eye-lid, beneath the lash, was also blackened, and gave to the whole countenance a fierce and repulsive aspect, and the nails were stained with henna. They wore white stockings and loose, thin, yellow, morocco slippers, which, when they left the dais, were thrust into wooden clogs, and in which they moved about with perfect ease. These clogs were of wood, inlaid with pearl, consisting of one horizontal piece, shaped like the sole of a shoe, supported on two upright ones, eight inches high. They slipped their feet into them without stooping, merely half turning round in the evolution; and they always left them at the foot of the dais when they came upon it. Their appearance and their movements were unbecoming and ungraceful.

In the evening, the great Sheikh of the 'Anazeh tribe (the ruler of the desert) came to see us; and, also the Sherîf of Damascus. The former is a fine, mild-looking man; but his character belies

the expression of his features, for he was recently concerned in an outrage upon some English travellers. He is the Sheikh with whom those who wish to visit the ruins of Palmyra, or cross the great desert, must make their contract.

The Sherîf was a venerable-looking old man, with a magnificent turban, of a fine, white material, intertwined with gold thread. He came in imposing state, with numerous attendants; while the powerful Sheikh, who holds life and death at his disposal, announced himself.

Sunday, June 25. The weather oppressively hot, and many complaining; which determined me to remain no longer in the city, but to lead the party again across the mountains.

Starting a little before sunset, and passing through the suburb and a gorge in the hills, we had, from an elevation just above where the Barada bursts through the mountain, a full view of the city and the surrounding country. There were the mountains, the desert, and the forest of gardens; the last intermingled with walls, and domes, and minarets, and untold roofs, and the tops of trees, and the glittering sheen of running water, all forming a scene of beauty unparalleled and indescribable. Damascus, with its gardens, is a city in a grove; and conveys the idea of art seated in the lap of nature,—an island of architecture in the midst of a sea of verdure. A little after 7 P. M., we encamped for the night, by the village of Damŭr, on the right bank of the Barada.

On the 26th our course led along the right bank of the river, now an impetuous stream, winding frequently, with many graceful curves from side to side of a narrow and luxuriant valley. The prevailing flowers were the wild white rose; a vine resembling the morning-glory, and a beautiful pink flower. It is strange that with a climate so similar to this, South America does not produce the white rose.

As we approached the village of Zebdâny, the winding road was shaded by the willow, and confined between hedges of the wild rose and a fragrant but unknown shrub. We camped early just without the village, which is embosomed amid luxuriant gardens enclosed by wattled hedges with rude gates, and beautiful,

shaded walks between. The enclosures, like those of Damascus, were a combination of patches of grain, orchards, and gardens, with a running stream through each. Among the fruit trees we gladly recognized the apple and the quince. The apples are celebrated in the market of Damascus.

Among these gardens, in the opinion of some writers, was the paradise of our first parents; and tradition denominates a spot within it the tomb of Adam.

We had reason to believe that inebriety prevailed among the Turks in Constantinople, but while in Syria saw only one intoxicated Arab—our muleteer on the present journey—who was rarely sober. On reaching Zebdâny, he had deceived me about the best camping-place, and I said to him, threateningly, as he laid beneath a tree, "I have a great mind to pour a pint of arrack down your throat for telling me an untruth;" when springing up, he exclaimed, "do, Howajeh, and I will kiss your feet!"

Tuesday, June 27. The nature of the country before us rendered a long ride necessary to-day. We therefore rose at 3.45 A. M., the moon peering over the eastern mountains, and again started at 4.50, just as the first beams of the sun tinged the snowy peak of Hermon.

Passing by several villages, and a deep ravine with large blocks of conglomerate in its bed, we rode over the rolling, but parched and dreary plain of Bŭk'ah, with Ghebel Sŭnnîn, crowned with snow, on our left. The Arabs hold that the ark rested on Sŭnnîn after the flood, and that Noah lived, and was buried, in this plain. Of the last, which was part of the Cœlosyria of the Romans, we know that it was the high road along which Egyptian, Syrian, and Roman hosts have passed, in devastating progress.

Early in the afternoon, we came in sight of the ruins of Heliopolis, or the Great Temple of the Sun, at Ba'albek, and camped without the village, on the banks of the small, but rapid and clear stream, dignified with the name of the "river of Ba'albek."

Thoroughly conscious of inability to convey an idea of these ruins, even if our exhausted condition had permitted sufficient notes to have been taken for the purpose, I will not attempt it.

Wednesday, June 28. Weather, warm and calm;—at midday, the heat oppressive, many of the party complaining, and some seriously indisposed. I determined, therefore, to forego a thorough examination of the ruins; and, abandoning the contemplated journey to the cedars of Lebanon, to hasten, with all practicable speed, to Beïrût, in the hope of meeting our ship. We found here a very beautiful species of the pink lark-spur, and also a pale, yellow honeysuckle, a native of the south of Europe, and naturalized as far north as Scotland, but which has not, before, been recognised so far to the East.

Striking across the plain towards the Lebanon range, we crossed the head-waters of the Litany, but were compelled to continue on for some time after dark. The mountains in solemn gloom, and lights here and there on the plain, indicated a distant village; the silence unbroken, but by the tramp of the animals and the tinkling bells of the caravan. At length we heard the welcome sound of dogs barking, succeeded by the voices of men; and, near 10 o'clock, camped, by starlight, near a village, where three snow-capped mountains overlooked the plain.

Thursday, June 29. Two of the men sick last night, one of them very much so. We seemed to have imbibed the disease which has heretofore prostrated all who have ventured upon the Dead Sea, and were about to pass the ordeal. As I looked upon my companions drooping around me, many and bitter were my self-reproaches for having ever proposed the undertaking.

Our route thence led along the flank of Lebanon towards the south-west. Here and there upon the plain on one side, and in every nook of the mountain on the other, was a village, through or beside which flowed a rivulet, bordered with trees and shrubbery, the only lines of vegetation above the plain. The cultivation was the same as we have heretofore seen, with the addition of the kersenna, a round pea with a hard shell, growing two or three in a pod, and resembling a very large radish seed in appearance. The kernel is saffron-coloured, sweet to the taste, and it is an article of food for oxen and camels, the last particularly. It is broken and given in moistened balls. We saw very

few birds in these mountains. We then traversed a well-watered and highly cultivated country, and passed through the village of Ma'alakah and the town of Zahley; the first seated on a slope, the last in a beautiful hollow of the mountain; the borders of the streams, tributaries of the Litany, in sight below, lined with willow and a profusion of the silver-leaved poplar. Near the town, we met a fellah on a donkey, travelling with all his effects; they consisted of a mat, two cushions, a pipe and an āba.

From this place I sent the interpreter ahead to engage quarters for us in the vicinity of Beïrût, if the ship were not there, as medical attendance would be required immediately upon our arrival. The horse he rode, the best traveller we had, died upon the way. Descending and skirting along the root of Lebanon, we turned and clambered up again, and stopped to rest at noon upon a terrace overlooking the whole plain of Bŭk'ah—a glorious sight—but we were too sick to enjoy it.

P. M., started again—two of the party scarce able to sit upon their horses—but we were obliged to proceed for want of accommodation. The road was a most execrable one, leading over the summit ridges of the Lebanon—a keen, cold wind blowing from south-west. From the highest summit we could see the mist above the sea, but not the sea itself. Soon after, we were compelled to stop, and camped near a dirty khan, on a little platform overlooking the lovely valley of Emanâ, one thousand feet below. It was a cold night, during which Mr. Dale was attacked with the same symptoms as the other sick. One of the party, going out of the tent in the dark, nearly fell over the ledge down the precipice.

Friday, June 30. A chilly morning—misty clouds sweeping over the mountain-tops and resting in the chasms. We were 4000 feet above the level of the sea. The two first taken sick were better, but Mr. Dale was worse. In company with Mr. Bedlow, I sent him ahead, that he might obtain the best medical advice as soon as possible.

Started at 7 A. M., the road winding over almost impassable mountain ridges, in some places by steps cut in the rock, and yet

it is the high road from Beïrût to Damascus—one, the principal sea-port, and the other, the capital of all Syria. In our weak condition, we travelled slowly; the way seemed to grow longer as the day wore on, and the coolness of the morning was succeeded by the scorching heat of noon.

For a short distance we travelled along an old Roman road, the curb-stones distinctly perceptible. At 11, Beïrût and the sea in sight, but the sick scarce able to keep their saddles, when fortunately we met our countryman, Dr. De Forest, of the Evangelical Mission, who prescribed some medicine to be administered as soon as possible. Soon after, stopped at a khan for that purpose. In an hour started again, and near the village of Bhamdûn passed some deposites of petrified clam and oyster shells, with some ammonites. Just below was ferruginous sandstone, which dipped towards the west, next carbonate of lime and calcareous limestone. At one place the crumbling sandstone presented a variety of hues, light brown, dark brown, maroon, purple, yellow, and pink. Two miles below, the sandstone dipped into the plain, and vegetation increased. The wheat, which grew so sparsely up the mountains as to be plucked up by the roots, was succeeded by the fig, the apricot, the vine, dhoura, beans, cucumbers and melons, while three-fourths of the space was covered with the mulberry. Along the road, just where the mountain sinks into the plain, were many carob trees, resembling the cherry in its trunk and limbs, and the colour of its bark, the apple tree in its leaves, and the catalpa in its fruit—a long narrow bean of an insipid sweet taste. As we opened the harbour of Beïrût, our strained eyes sought in vain for the ship we so longed to see. My heart sank within me, as, after many alternations of hope and fear, the only three-masted vessel in the port proved not to be the Supply. The end who could foresee!

The luxuriant foliage of the plain intercepted the light breeze we had felt in the mountains, and it was excessively sultry; but traversing the groves of pine, planted to arrest the encroachments of sand from the sea, and thence, riding through gardens that seemed interminable, we at length reached our quarters upon

the shore. Some of us were unable to dismount, from sheer exhaustion; Mr. Dale, two of the seamen, and myself, requiring immediate medical attendance.

Saturday, July 1. All hands, nearly, sick. Dr. Suquet, a French physician, sent by his government to study the diseases of Syria, in attendance; but, feeling uneasy about two cases, I sent an express for Dr. De Forest. The weather warm and relaxing.

Sunday, July 2. The sick mostly better. Dr. De Forest arrived. He said that much care was required; but that with care no danger was to be apprehended. He declined compensation. Weather warm but not oppressive.

Monday, July 3. The sick much better, except one new case. Our wounded man came to see us. We were ever scanning the horizon for the expected ship.

Tuesday, July 4. Sick convalescent with the exception of one of the seamen, attacked early in the morning. At noon, fired twenty-one guns in honour of the day. Weather warm.

On Monday, the 10th, Mr. Dale, in the hope of being more speedily invigorated by the mountain air, rode to Bhamdûn, a village about twelve miles distant up the mountain. It was the dreadful Damascus road, which we had travelled eleven days before. He arrived thoroughly exhausted, but was the next day much recruited. On the second day, however, a sirocco set in, which lasted three days, and completely prostrated him. On the 17th I received intelligence that he was very ill, and immediately hastened up, and found him partially delirious. He laboured under a low, nervous fever, the same which had carried off Costigan and Molyneaux. He was in the house of the Rev. Mr. Smith, of the American Presbyterian Mission, and received from all its members there the kindest and most assiduous nursing. Dr. De Forest was in constant attendance day and night, and his wife was as a ministering angel to the invalid. Dr. Vandyke came some distance to see him, and his case received every alleviation that the warmest sympathy could afford.

My poor friend lingered until the evening of the 24th, when

he expired so gently, that it was difficult to tell the moment of dissolution. Determined to take his remains home, if possible, I started immediately with them for Beïrût. It was a slow, dreary ride down the rugged mountain by torchlight. As I followed the body of my late companion, accompanied only by swarthy Arabs, and thought of his young and helpless children, I could scarce repress the wish that I had been taken, and he been spared. At times, the wind, sweeping in fitful gusts, nearly extinguished the torches; and again their blaze would stream up with a lurid glare, as we made our way through chasms and hollows, enveloped in a dense and palpable mist. We reached the neighbourhood of the town at daylight, and the body was immediately placed in three coffins, (one metallic, and two wooden ones,) and laid in a vacant building.

In the gloom, consequent on our loss, we waited impatiently for the Supply; but in vain we hourly scanned the horizon. On the 30th, one month after our return, the physicians advised us to leave at once, as there could be no hope of the recovery of the sick at Beïrût. I therefore chartered a small French brig, to take our boats and effects, the body of our friend, and ourselves, to Malta. An unhappy accident in the transportation of the remains from the shore to the vessel, and the superstitious fears of the French captain and his crew, compelled me most reluctantly to land them. About sunset, as the Turkish batteries were saluting the first night of the Ramedan, we escorted the body to the Frank cemetery, and laid it beneath a Pride of India tree. A few most appropriate chapters in the Bible were read, and some affecting remarks made by the Rev. Mr. Thompson; after which, the sailors advanced, and fired three volleys over the grave; and thus, amid unbidden tears and stifled sobs, closed the the obsequies of our lamented companion and friend.

At 9 P. M., we embarked on board of La Perle d'Orient; and, after a tedious passage of thirty-eight days, during which we suffered much from sickness, debility, and scarcity of food and water, we reached Malta, and received every possible attention from our Consul, Mr. Winthrop. Coming from a sickly climate,

we were not permitted to enter the town, or to associate with any one, but were confined in a building apart.

On the 12th of September, the Supply having arrived, I had the satisfaction of reëmbarking the Expedition, with only three of its members on the sick-report.

Sailing thence, we touched at Naples, Marseilles, and Gibraltar, in the hope of procuring supplies; but, in the two first places, we were refused pratique, and from the last, we were peremptorily ordered away. Like the dove that could find no resting-place, our weary ship then winged her way for home; and depending on the rains of heaven to replenish our water, we were, early in December, greeted with the heart-cheering sight of our native land.

THE END.

NOW READY.

JOHNSTON'S PHYSICAL ATLAS.

THE PHYSICAL ATLAS

OF NATURAL PHENOMENA.

FOR THE USE OF COLLEGES, ACADEMIES, AND FAMILIES.

BY ALEXANDER KEITH JOHNSTON, F.R.G.S., F.G.S.

Geographer at Edinburgh in Ordinary to her Majesty, Honorary Member of the Geographical Society, Berlin.

In one large volume, imperial quarto, handsomely bound,

With Twenty-six Plates, Engraved and Colored in the best style.

Together with 112 pages of Descriptive Letter-press, and a very copious Index.

LIST OF PLATES.

GEOLOGY.

1. Geological Structure of the Globe.
2. Mountain Chains of Europe and Asia.
3. Mountain Chains of America.
4. Illustration of the Glacier System of the Alps. (Mont Blanc.)
5. Phenomena of Volcanic Action. Palæontological and Geological Map of the British Islands. (Frontispiece.)

HYDROGRAPHY.

1. Physical Chart of the Atlantic Ocean.
2. Physical Chart of the Indian Ocean.
3. Physical Chart of the Pacific Ocean or Great Sea.
4. Tidal Chart of the British Seas.
5. The River Systems of Europe and Asia.
6. The River Systems of America. Tidal Chart of the World.

METEOROLOGY.

1. Humboldt's System of Isothermal Lines.
2. Geographical Distribution of the Currents of Air.
3. Hyetographic or Rain Map of the World.
4. Hyetographic or Rain Map of Europe.

NATURAL HISTORY.

1. Geographical Distribution of Plants.
2. Geographical Distribution of the Cultivated Plants used as Food.
3. Geographical Distribution of Quadrumana, Edentata, Marsupialia, and Pachydermata.
4. Geographical Distribution of Carnivora
5. Geographical Distribution of Rodentia and Ruminantia.
6. Geographical Distribution of Birds.
7. Geographical Distribution of Reptiles
8. Ethnographic Map of the World.
9. Ethnographic Map of Great Britain and Ireland.

This very conviction of its value would lead us to urge upon Mr. Johnston the expediency of some reduced form of his great Atlas, which might render it more accessible to common readers. * * We know of no work of which the methods are so well fitted for the instruction of those who come ignorantly to the subject.—*Quarterly Review.*

To the scholar, to the student, and to the already large, yet daily increasing multitude of inquirers who cultivate natural science, the *Physical Atlas* is a treasure of incalculable value. It brings before the mind's eye, in one grand panoramic view, and in a form clear, definite, and easily comprehensible, all the facts at present known relative to the great subjects of which it treats, and may be regarded as a lucid epitome of a thousand scattered volumes, more or less intrinsically valuable, of which it contains the heart and substance.—*Blackwood's Magazine.*

By devoting a single hour to the contemplation of our globe in the diorama of a Physical Atlas, the student will witness the grandeur of the tenement in which he dwells, and will not fail to appreciate the beautiful conception of Humboldt, when he speaks of "the life of the earth."—*North British Review.*

The author avails herself with much pleasure, of an opportunity of expressing her admiration of the accuracy, extent, and execution of Mr. Keith Johnston's *Physical Atlas*, and of the valuable information contained in the letterpress which accompanies it, which has afforded her the greatest assistance. It was the author's wish, and her publisher's intention, that the present edition should be accompanied by a series of maps to illustrate the more important questions of Physical Geography treated of in it; but Mr. A. Keith Johnston having announced the publication of a new edition of his "Physical Atlas," in a reduced size at a low price—the first two numbers of which have already appeared—the project was relinquished, in the belief that Mr. A. K. Johnston's smaller Atlas will furnish suitable illustrations to this work.—*From the New Edition of Mrs. Somerville's Physical Geography.*

SOMERVILLE'S PHYSICAL GEOGRAPHY.

New Edition, much improved. Now Ready.

PHYSICAL GEOGRAPHY.

BY MARY SOMERVILLE,

AUTHOR OF "THE CONNECTION OF THE PHYSICAL SCIENCES," ETC. ETC.

SECOND AMERICAN EDITION,

From the Second and Revised London Edition.

WITH AMERICAN NOTES, GLOSSARY, &c.

In one neat royal 12mo. volume, extra cloth, of over 500 pages.

The great success of this work, and its introduction into many of the higher schools and academies, have induced the publishers to prepare a new and much improved edition. In addition to the corrections and improvements of the author bestowed on the work in its passage through the press a second time in London, notes have been introduced to adapt it more fully to the physical geography of this country; and a comprehensive glossary has been added, rendering the volume more particularly suited to educational purposes. The amount of these additions may be understood from the fact, that not only has the size of the page been increased, but the volume itself enlarged by over one hundred and fifty pages. At the same time, the price has not been increased.

While reading this work, we could not help thinking how interesting, as well as useful, geography as a branch of education might be made in our schools. In many of them, however, this is not accomplished. It is to be hoped that this defect will be remedied; and that in all our educational institutions Geography will soon be taught in the proper way. Mrs. Somerville's work may, in this respect, be pointed to as a model.—*Tait's Edinburgh Magazine.*

Although there are few subjects drier and more uninteresting in their details than Geography, when confined to descriptions of the mere form of the earth, the height of its mountains, the length and breadth of its rivers, with the extent of its oceans, the whole features of this study become changed when, instead of regarding the objects which it embraces in their present condition or superficial character, we enter on their past history and examine their nature and relations by the light of modern science.

Springs, rivers, inland seas, and lakes follow in their turn the ocean; and each is treated in the same judicious way. No more is said than is necessary to the understanding of these subjects in their proper relations; whilst every fact is stated in a lucid and interesting manner.—*The Athenæum.*

An admirable work, full of varied information and wholesome philosophy.—*New Orleans Bee.*

We have thus followed Mrs. Somerville through her intellectual journey over the globe, delighted and improved by her instructions, and anxious that others should derive from it the same pleasure and advantage. From the extracts which we have made, the reader will see that the work is written in a style always simple and perspicuous, often vigorous and elegant, occasionally rising to a strain of eloquence, commensurate with the lofty ideas which it clothes. In Mrs. Somerville's pages no sentiments are recorded which the Christian or philosopher disowns. In associating life with nature—in taking cognizance of man as tenant of the earth-home which she describes, her aspirations ever after truth, secular and divine, and everywhere throughout her work we meet with just and noble sentiments, the indication and the offspring of a highly cultivated and well balanced mind.—*North British Review.*

From the information given, and the strength of thought displayed, on almost every page, the work is equally entitled to an attentive perusal.—*S. Literary Messenger.*

Our praise comes lagging in the rear, and is well-nigh superfluous. But we are anxious to recommend to our youth the enlarged method of studying geography which her present work demonstrates to be as captivating as it is instructive. Nowhere, except in her own previous work, The Connexion of the Physical Sciences, is there to be found so large a store of well-selected information so lucidly set forth. In surveying and grouping together whatever has been seen by the eyes of others, or detected by their laborious investigations, she is not surpassed by any one. We have no obscurities other than what the imperfect state of science itself involves her in; no dissertations which are felt to interrupt or delay. She strings her beads distinct and close together. With quiet perspicacity she seizes at once whatever is most interesting and most captivating in her subject. Therefore it is we are for the book; and we hold such presents as Mrs. Somerville has bestowed upon the public, to be of incalculable value, disseminating more sound information than all the literary and scientific institutions will accomplish in a whole cycle of their existence.—*Blackwood's Mag.*

LIBRARY OF ILLUSTRATED SCIENTIFIC WORKS.

UNDER THIS TITLE LEA & BLANCHARD ARE PUBLISHING

A SERIES OF BEAUTIFULLY ILLUSTRATED WORKS,

ON VARIOUS BRANCHES OF SCIENCE,

By the most distinguished men in their respective departments.

Printed in the handsomest style, and embellished in the most efficient manner.

☞ No expense has been or will be spared to render this series worthy of the support of the scientific public, and at the same time one of the handsomest specimens of typographical and artistic execution which has appeared in this country.

Specimens of the Engravings and style of the volumes may be had on application to the publishers.

MULLER'S PHYSICS—LATELY ISSUED.

PRINCIPLES
OF
PHYSICS AND METEOROLOGY.

BY PROFESSOR J. MULLER, M. D.

EDITED, WITH ADDITIONS, BY R. EGLESFELD GRIFFITH, M. D.

In one large and handsome octavo volume, with 550 wood-cuts, and two colored plates.

This is a large, elegant, and most admirable volume—thefirst of a series of scientific books now passing through the press in London, and which cannot fail to commend themselves to the favor of all who take any interest in the progress of science among the great mass of the people. The author is one of the most distinguished scientific men in Germany, and these works have been prepared with the utmost care, and are put forth in a form admirably adapted to secure that wide circulation and universal favor which they deserve.—*N. Y. Courier and Inquirer.*

NOW READY.

PRACTICAL PHARMACY.

COMPRISING THE ARRANGEMENTS, APPARATUS, AND MANIPULATIONS OF THE PHARMACEUTICAL SHOP AND LABORATORY.

BY FRANCIS MOHR, Ph. D.,

Assessor Pharmaciæ of the Royal Prussian College of Medicine, Coblentz;

AND THEOPHILUS REDWOOD,

Professor of Pharmacy in the Pharmaceutical Society of Great Britain.

EDITED, WITH EXTENSIVE ADDITIONS,

BY PROFESSOR WILLIAM PROCTER,

Of the Philadelphia College of Pharmacy.

In one handsomely printed octavo volume, of 570 pages, with over 500 engravings on wood.

In Preparation, works on Metallurgy, Food, the Steam Engine, Machines, Astronomy, Rural Economy, &c.

Library of Illustrated Scientific Works.—Continued.

KNAPP'S CHEMICAL TECHNOLOGY.

TECHNOLOGY;

OR, CHEMISTRY APPLIED TO THE ARTS AND TO MANUFACTURES.

BY DR. F. KNAPP,

Professor at the University of Giessen.

EDITED, WITH NUMEROUS NOTES AND ADDITIONS, BY

DR. EDMUND RONALDS, AND DR. THOMAS RICHARDSON.

FIRST AMERICAN EDITION, WITH NOTES AND ADDITIONS,

BY PROFESSOR WALTER R. JOHNSON.

In two handsome octavo volumes, printed and illustrated in the highest style of art.

Volume One, lately published, with two hundred and fourteen large wood engravings.
Volume Two, now ready, with two hundred and fifty wood engravings.

One of the best works of modern times.—*New York Commercial.*

We think it will prove the most popular, as it is decidedly the best of the series. Written by one who has for many years studied both theoretically and practically the processes which he describes, the descriptions are precise, and conveyed in a simple unpretending style, so that they are easily understood, while they are sufficiently full in detail to include within them everything necessary to the entire comprehension of the operations. The work is also carefully brought down to include the most recent improvements introduced upon the continent of Europe, and thus gives us full descriptions of processes to which reference is frequently made in other works, while many of them are, we believe, now for the first time presented in a complete state to the English reader.—*Franklin Institute Journal.*

WEISBACH'S MECHANICS.

PRINCIPLES OF THE MECHANICS OF MACHINERY AND ENGINEERING.

By PROFESSOR JULIUS WEISBACH.

TRANSLATED AND EDITED

BY PROFESSOR GORDON, OF GLASGOW.

First American Edition, with Additions,

By PROF. WALTER R. JOHNSON.

In two Octavo Volumes, beautifully printed.

Volume One, with five hundred and fifty illustrations, just issued.
Volume Two, with three hundred and thirty illustrations, now ready.

This work is one of the most interesting to mathematicians that has been laid before us for some time; and we may safely term it a *scientific gem.*—*The Builder.*

The most valuable contribution to practical science that has yet appeared in this country.—*Athenæum.*

In every way worthy of being recommended to our readers.—*Franklin Institute Journal.*

From Charles H. Haswell, Esq., Engineer in Chief, U. S. N.

The design of the author in supplying the instructor with a guide for teaching, and the student with an auxiliary for the acquirement of the science of mechanics, has, in my opinion, been attained in a most successful manner. The illustrations, in the fullness of their construction, and in typographical execution, are without a parallel. It will afford me much pleasure to recommend its use by the members of the profession with which I am connected.

NOW COMPLETE.—STRICKLAND'S QUEENS OF ENGLAND.

NEW AND IMPROVED EDITION.

LIVES OF THE QUEENS OF ENGLAND,

FROM THE NORMAN CONQUEST.

WITH ANECDOTES OF THEIR COURTS.

Now First Published from Official Records, and other Authentic Documents, Private as well as Public.

NEW EDITION, WITH ADDITIONS AND CORRECTIONS.

BY AGNES STRICKLAND.

In six volumes crown octavo, extra crimson cloth, or half morocco, printed on fine paper and large type.

In this edition, Volume One contains Vols. 1, 2 and 3 of the 12mo. edition; Volume Two contains Vols. 4 and 5; Volume Three contains Vols. 6 and 7; Volume Four contains Vols. 8 and 9; Volume Five contains Vols. 10 and 11; and Volume Six contains Vol. 12. The whole forming a very handsome series, suitable for presents, prizes, &c.

The publishers have great pleasure in presenting to the public this work in a complete form. During the long period in which it has been issuing from the press, it has assumed the character of a standard work; and, as occupying ground hitherto untouched, as embodying numerous historical facts hitherto unnoticed, and as containing vivid sketches of the character and manners of the times, with anecdotes, documents, &c. &c., it presents numerous claims on the attention of both the student of history and desultory reader.

Those who have been waiting its completion can now obtain it, forming a handsome set, twelve volumes in six, in various styles of binding.

HERVEY'S COURT OF GEORGE II.

MEMOIRS OF THE REIGN OF GEORGE THE SECOND,

From his Accession to the Death of Queen Caroline.

BY JOHN LORD HERVEY.

EDITED, FROM THE ORIGINAL MANUSCRIPT, AT ICKWORTH,

BY THE RIGHT HON. JOHN WILSON CROKER, LL. D., F. R. S., &c.

In two handsome volumes, royal 12mo., extra cloth.

PARDOE'S FRANCIS THE FIRST.—NOW READY.

THE COURT AND REIGN OF FRANCIS THE FIRST,

KING OF FRANCE.

BY MISS PARDOE,

AUTHOR OF "LOUIS THE FOURTEENTH," "CITY OF THE SULTAN, &c. &c.

In two very neat volumes, royal 12mo., extra cloth.

EASTERN LIFE, PRESENT AND PAST.

BY HARRIET MARTINEAU.

In one large and handsome volume, crown octavo.

HOUSEHOLD EDUCATION.

BY HARRIET MARTINEAU.

In one handsome vol., royal 12mo.

MAGNIFICENT PRESENTATION WORK.

NOW READY.

IRISH MELODIES.

BY THOMAS MOORE, Esq.

WITH NOTES AND BIOGRAPHICAL PREFACES.

ILLUSTRATED WITH BEAUTIFUL STEEL PLATES.

ENGRAVED UNDER THE IMMEDIATE SUPERINTENDENCE OF MR. EDWARD FINDEN

In one large imperial quarto volume of 174 pages, handsomely bound in extra cloth, with gilt edges. Beautifully printed on superior paper.

LIST OF PLATES.

Nora Creina,	Painted by W. P. Frith,	Engr'd by	E. Finden.
Rich and Rare were the Gems she Wore,	" W. Fisher,	"	W. H. Mote.
Eveleen,	" R. T. Bott,	"	E. Finden.
Love's Young Dream,	" A. Derby,	"	E. Finden.
Lesbia,	" W. P. Frith,	"	W. Holl.
Kathleen and St. Kevin,	" E. Hawkes,	"	W. Holl.
The Hamlet's Pride,	" W. Room,	"	W. Edwards.
Laughing Eyes,	" W. P. Frith,	"	E. Finden.
The Mountain Sprite,	" F. Wood,	"	E. Finden.
The Desmond's Love,	" F. Crowley,	"	W. Edwards.

The care which has been exercised in every portion of this volume, both as to its mechanical and artistical execution, renders it in all respects well worthy of the "Irish Melodies." In illustrations, type, printing, paper, and binding, it is equal to anything that has as yet appeared in this country; and, as a work whose attraction is not confined to a single season, it should command the attention of the public.

Now Ready.—MACKAY'S TRAVELS IN THE UNITED STATES.

THE WESTERN WORLD;

OR, TRAVELS IN THE UNITED STATES.

EXHIBITING THEM IN THEIR LATEST DEVELOPMENT, SOCIAL, POLITICAL, AND INDUSTRIAL.

INCLUDING A CHAPTER ON CALIFORNIA.

BY ALEXANDER MACKAY, Esq.

FROM THE SECOND AND ENLARGED LONDON EDITION.

In two very neat vols., royal 12mo.

READINGS FOR THE YOUNG.

FROM THE WORKS OF SIR WALTER SCOTT.

WITH NUMEROUS AND BEAUTIFUL PLATES.

In two very handsome vols., royal 18mo., crimson cloth

POEMS,

BY ELLIS, CURRER, AND ACTON BELL,

Authors of "Jane Eyre," &c.

In one vol., royal 18mo.

DOMBEY AND SON, COMPLETE.

In one large octavo vol. of 320 double-columned pages, with 16 plates, price 50 cents.

ALSO, AN EDITION ON FINE PAPER, WITH 40 PLATES, EXTRA CLOTH.

DICKENS'S DAVID COPPERFIELD.

PUBLISHING IN NUMBERS, WITH PLATES, PRICE 5 CENTS EACH.

Uniform with Lea & Blanchard's complete edition of Dickens's Novels and Tales.

MIRABEAU, A Life History.

In one neat volume, royal 12mo.

SHAW'S ENGLISH LITERATURE.

OUTLINES OF ENGLISH LITERATURE.

BY THOMAS B. SHAW,

Professor of English Literature in the Imperial Alexander Lyceum of St. Petersburg.

In one large and handsome royal 12mo. volume.

A valuable and very interesting volume, which for various merits will gradually find its way into all libraries.—*N. Y. Knickerbocker.*

Supplies a want long and severely felt.—*Southern Literary Gazette.*

Traces our literary history with remarkable zest, fairness, and intelligence.—*N. Y. Home Journal.*

An admirable work—graphic and delightful.—*Pennsylvanian.*

The best publication of its size upon English literature that we have ever met with.—*Neal's Saturday Gazette.*

Eminently readable.—*City Item.*

A judicious epitome—well adapted for a class-book, and at the same time worthy of a place in any library.—*Penn. Inquirer.*

From the Rev. W. G. T. Shedd, Professor of English Literature in the University of Vt.

BURLINGTON, MAY 18, 1849.

I take great pleasure in saying that it supplies a want that has long existed of a brief history of English literature, written in the right method and spirit, to serve as an introduction to the critical study of it. I shall recommend the book to my classes.

FOSTER'S EUROPEAN LITERATURE.—NOW READY.

HANDBOOK OF MODERN EUROPEAN LITERATURE:

British, Danish, Dutch, French, German, Hungarian, Italian, Polish and Russian, Portuguese, Spanish, and Swedish.

With a full Biographical and Chronological Index.

BY MRS. FOSTER.

In one large royal 12mo. volume, extra cloth.

(UNIFORM WITH SHAW'S OUTLINES OF ENGLISH LITERATURE.)

This compilation will prove of great utility to all young persons who have just completed their academical studies. The volume gives both a general and particular view of the literature of Europe from the revival of letters to the present day. It is compiled with care and judgment, and is, in all respects, one of the most instructive works that could be placed in the hands of young persons.—*Morning Herald.*

ATLAS TO DANA ON CORALS.

In one large Imperial folio volume, with Sixty-one Plates,

Drawn and Colored after Nature, by the best Artists.

Beautifully and strongly bound in half morocco.

Of this magnificent work but a very few copies have been offered for sale, and these are nearly exhausted. Those who are desirous of enriching their libraries with so splendid a specimen of American Art and Science will therefore do well to procure copies at once.

A FEW COPIES STILL ON HAND OF

DANA ON CORALS AND ZOOPHYTES.

Being Volume VIII. of the United States Exploring Expedition Publications.

WILKES'S CALIFORNIA—A NEW WORK, JUST ISSUED.

WESTERN AMERICA,

INCLUDING OREGON AND CALIFORNIA.

With Maps of those Regions and of the Sacramento Valley.

BY CHARLES WILKES, U. S. N.,

Commander of the United States Exploring Expedition.

Octavo. Price 75 cents.

SIXTH EDITION, REVISED. NOW READY.

LYNCH'S DEAD SEA EXPEDITION.

NARRATIVE OF THE U. S. EXPEDITION

TO THE RIVER JORDAN AND THE DEAD SEA.

BY W. F. LYNCH, U. S. N.,

Commander of the Expedition.

In one large and beautiful octavo volume, of over five hundred pages.

With a Map of the Jordan, of the Dead Sea, and Twenty-eight Illustrations, executed in the handsomest style.

This work has elicited the approbation of the press in a manner almost unequalled. From among numerous similar testimonials, the publishers beg to submit the following:

This book, so long and anxiously expected, fully sustains the hopes of the most sanguine and fastidious. It is truly a magnificent work. The type, paper, binding, style, and execution are all of the best and highest character, as are also the maps and engravings. It will do more to elevate the character of our national literature than any work that has appeared for years. The intrinsic interest of the subject will give it popularity and immortality at once. It must be read to be appreciated; and it will be read extensively, and valued, both in this and other countries.—*Lady's Book, Aug.* 1849.

Lieut. Lynch's book must be pronounced of great value, not only for the additions which it makes to our knowledge, but as the authentic record of an enterprise in the highest degree honorable to all the parties concerned. In our esteem, the value of the work is greatly enhanced by the engravings. The interest of these lies in their representing subjects mostly new to those who have been wearied with the five-hundredth repetition of the same scenes and objects. The views on the Dead Sea are of special and remarkable interest, and the costume figures are also striking and suggestive.—*North British Review, August,* 1849.

A large and elegant volume, of marked interest and decided value.—*N. Y. Courier and Enquirer.*

A most elegant volume, profusely illustrated with beautiful maps and plates.—*Evening Bulletin.*

One of the most useful and deeply interesting volumes that have recently been issued from the press.—*Albany Evening Journal.*

A lasting memorial of a great national enterprise successfully consummated.—*N. Y. Commercial Advertiser.*

It has rarely been our lot to receive a work of more sterling merit.—*City Item.*

For the Christian student this volume possesses peculiar interest.—*Zion's Herald.*

We have read this work with profound interest and much satisfaction.—*Southern Weekly Gazette.*

A work of rare interest.—*N. Y. Churchman.*

It will unquestionably be regarded as one of the most valuable and interesting works of the season.—*Washington Union.*

Our thanks are due to Lieut. Lynch for the gratification and instruction we have derived from his very able volume.—*N. Y. Tribune.*

TALES AND STORIES FROM HISTORY.

BY AGNES STRICKLAND,

Author of "Lives of the Queens of England," etc.

In one handsome royal 18mo. volume, crimson extra cloth, with illustrations.

THE SUGAR PLANTER'S MANUAL.

BEING A TREATISE ON THE ART OF OBTAINING SUGAR FROM THE CANE.

BY W. J. EVANS, M. D.

In one neat volume, small 8vo., 268 pages, with wood-cuts and two plates.

THEORY OF LIFE.

BY S. T. COLERIDGE. In one small volume, 12mo.

CATALOGUE

OF

LEA AND BLANCHARD'S

PUBLICATIONS.

THE AMERICAN ENCYCLOPÆDIA.

BROUGHT UP TO 1847.

THE ENCYCLOPÆDIA AMERICANA:

A POPULAR DICTIONARY

OF ARTS, SCIENCES, LITERATURE, HISTORY, POLITICS AND BIOGRAPHY.

IN FOURTEEN LARGE OCTAVO VOLUMES OF OVER SIX HUNDRED DOUBLE COLUMNED PAGES EACH.

For sale very low, in various styles of binding.

During the long period which this work has been before the public, it has attained a very high character as an

ENCYCLOPÆDIA FOR DAILY REFERENCE,

Containing, in a comparatively moderate space, a vast quantity of information which is scarcely to be met with elsewhere, and of the exact kind which is wanted in the daily exigencies of conversation and reading. It has also a recommendation shared by no other work of the kind now before the public, in being an American book. The numerous American Biographies, Accounts of American Inventions and Discoveries, References to our Political Institutions, and the general adaptation of the whole to our own peculiar habits and modes of thought, peculiarly suit it to readers in this country. From these causes, it is also especially fitted for all

DISTRICT SCHOOL AND OTHER PUBLIC LIBRARIES,

in some of which it has been tried with great satisfaction. It fulfils, to a greater extent than perhaps any similar work, the requirements for these institutions, presenting, in a small compass and price, the materials of a library, and furnishing a book for every-day use and reference, indispensable to those removed from the large public collections.

Some years having elapsed since the original thirteen volumes of the ENCYCLOPÆDIA AMERICANA were published, to bring it up to the present day, with the history of that period, at the request of numerous subscribers, the publishers have just issued a

SUPPLEMENTARY VOLUME (THE FOURTEENTH),

BRINGING THE WORK UP TO THE YEAR 1847

EDITED BY HENRY VETHAKE, LL.D.

Vice-Provost and Professor of Mathematics in the University of Pennsylvania, Author of "A Treatise on Political Economy."

In one large octavo volume of over 650 double columned pages.

ENCYCLOPÆDIA AMERICANA.

The numerous subscribers who have been waiting the completion of this volume can now perfect their sets, and all who want

A REGISTER OF THE EVENTS OF THE LAST FIFTEEN YEARS, FOR THE WHOLE WORLD,

can obtain this volume separately: price Two Dollars uncut in cloth, or Two Dollars and Fifty Cents in leather, to match the styles in which the publishers have been selling sets.

Subscribers in the large cities can be supplied on application at any of the principal bookstores; and persons residing in the country can have their sets matched by sending a volume in charge of friends visiting the city.

Complete sets furnished at very low prices in various bindings.

"The publishers of the Encyclopædia Americana conferred an obligation on the public when, fourteen years ago, they issued the thirteen volumes from their press. They contained a wonderful amount of information, upon almost every subject which would be likely to occupy public attention, or be the theme of conversation in the private circle. Whatever one would wish to inquire about, it seemed only necessary to dip into the Encyclopædia Americana, and there the outline, at least, would be found, and reference made to those works which treat at large upon the subject. It was not strange, therefore, that the work was popular. But in fourteen years, great events occur. The last fourteen years have been full of them, and great discoveries have been made in sciences and the arts; and great men have, by death, commended their names and deeds to the fidelity of the biographer, so that the Encyclopædia that approached perfection in 1832, might fall considerably behind in 1846. To bring up the work, and keep it at the present point, has been a task assumed by Professor Vethake, of the Pennsylvania University, a gentleman entirely competent to such an undertaking; and with a disposition to do a good work, he has supplied a supplementary volume to the main work, corresponding in size and arrangements therewith, and becoming, indeed, a fourteenth volume. The author has been exceedingly industrious, and very fortunate in discovering and selecting materials, using all that Germany has presented, and resorting to every species of information of events connected with the plan of the work, since the publication of the thirteen volumes. He has continued articles that were commenced in that work, and added new articles upon science, biography, history, and geography, so as to make the present volume a necessary appendage in completing facts to the other. The publishers deserve the thanks of the readers of the volume, for the handsome type, and clear white paper they have used in the publication."—*United States Gazette.*

"This volume is worth owning by itself, as a most convenient and reliable compend of recent History, Biography, Statistics, &c., &c. The entire work forms the cheapest and probably now the most desirable Encyclopædia published for popular use."—*New York Tribune.*

"The Conversations Lexicon (Encyclopædia Americana) has become a household book in all the intelligent families in America, and is undoubtedly the best depository of biographical, historical, geographical and political information of that kind which discriminating readers require."—*Silliman's Journal.*

"This volume of the Encyclopædia is a Westminster Abbey of American reputation. What names are on the roll since 1833!"—*N. Y. Literary World.*

"The work to which this volume forms a supplement, is one of the most important contributions that has ever been made to the literature of our country. Besides condensing into a comparatively narrow compass, the substance of larger works of the same kind which had preceded it, it contains a vast amount of information that is not elsewhere to be found, and is distinguished, not less for its admirable arrangement, than for the variety of subjects of which it treats. The present volume, which is edited by one of the most distinguished scholars of our country, is worthy to follow in the train of those which have preceded it. It is a remarkably felicitous condensation of the more recent improvements in science and the arts, besides forming a very important addition to the department of Biography, the general progress of society, &c., &c."—*Albany Argus.*

CAMPBELL'S LORD CHANCELLORS.

JUST PUBLISHED.

LIVES OF THE LORD CHANCELLORS AND KEEPERS OF THE GREAT SEAL OF ENGLAND,

FROM THE EARLIEST TIMES TO THE REIGN OF KING GEORGE IV.,

BY JOHN LORD CAMPBELL, A.M., F.R.S.E.

First Series, forming three neat volumes in demy octavo, extra cloth.

Bringing the work to the time of Lord Jeffries.

THE SECOND SERIES WILL SHORTLY FOLLOW IN FOUR VOLUMES TO MATCH.

"It is sufficient for us to thank Lord Campbell for the honest industry with which he has thus far prosecuted his large task, the general candor and liberality with which he has analyzed the lives and characters of a long succession of influential magistrates and ministers, and the manly style of his narrative. We need hardly say that we shall expect with great interest the continuation of this performance. But the present series of itself is more than sufficient to give Lord Campbell a high station among the English authors of his age."—*Quarterly Review.*

"The volumes teem with exciting incidents, abound in portraits, sketches and anecdotes, and are at once interesting and instructive. The work is not only historical and biographical, but it is anecdotal and philosophical. Many of the chapters embody thrilling incidents, while as a whole, the publication may be regarded as of a high intellectual order."—*Inquirer.*

"A work in three handsome octavo volumes, which we shall regard as both an ornament and an honor to our library. A History of the Lord Chancellors of England from the institution of the office, is necessarily a History of the Constitution, the Court, and the Jurisprudence of the Kingdom, and these volumes teem with a world of collateral matter of the liveliest character for the general reader, as well as with much of the deepest interest for the professional or philosophical mind."—*Saturday Courier.*

"The brilliant success of this work in England is by no means greater than its merits. It is certainly the most brilliant contribution to English history made within our recollection; it has the charm and freedom of Biography combined with the elaborate and careful comprehensiveness of History."—*N. Y. Tribune.*

MURRAY'S ENCYCLOPÆDIA OF GEOGRAPHY.

THE ENCYCLOPÆDIA OF GEOGRAPHY,

COMPRISING

A COMPLETE DESCRIPTION OF THE EARTH, PHYSICAL, STATISTICAL, CIVIL AND POLITICAL.

EXHIBITING

ITS RELATION TO THE HEAVENLY BODIES, ITS PHYSICAL STRUCTURE, THE NATURAL HISTORY OF EACH COUNTRY, AND THE INDUSTRY, COMMERCE, POLITICAL INSTITUTIONS, AND CIVIL AND SOCIAL STATE OF ALL NATIONS.

BY HUGH MURRAY, F.R.S.E., &c.

Assisted in Botany, by Professor HOOKER—Zoology, &c., by W. W. SWAINSON—Astronomy, &c. by Professor WALLACE—Geology, &c., by Professor JAMESON.

REVISED, WITH ADDITIONS,

BY THOMAS G. BRADFORD.

THE WHOLE BROUGHT UP, BY A SUPPLEMENT, TO 1843.

In three large octavo volumes.

VARIOUS STYLES OF BINDING.

This great work, furnished at a remarkably cheap rate, contains about NINETEEN HUNDRED LARGE IMPERIAL PAGES, and is illustrated by EIGHTY-TWO SMALL MAPS, and a colored MAP OF THE UNITED STATES, after Tanner's, together with about ELEVEN HUNDRED WOOD CUTS executed in the best style.

STRICKLAND'S QUEENS OF ENGLAND.

A NEW AND ELEGANT EDITION

OF

LIVES OF THE QUEENS OF ENGLAND,

FROM THE NORMAN CONQUEST;

WITH ANECDOTES OF THEIR COURTS, NOW FIRST PUBLISHED FROM OFFICIAL RECORDS AND OTHER AUTHENTIC DOCUMENTS, PRIVATE AS WELL AS PUBLIC.

NEW EDITION, WITH ADDITIONS AND CORRECTIONS.

BY AGNES STRICKLAND.

Forming a handsome series in crown octavo, beautifully printed with large type on fine paper, done up in rich extra crimson cloth, and sold at a cheaper rate than former editions.

Volume One, of nearly seven hundred large pages, containing Volumes One, Two, and Three, of the duodecimo edition, and Volume Two, of more than six hundred pages, containing Volumes Four and Five of the 12mo., have just been issued. The remainder will follow rapidly, two volumes in one, and the whole will form an elegant set of one of the most popular histories of the day. The publishers have gone to much expense in preparing this from the revised and improved London edition, to meet the frequent inquiries for the "Lives of the Queens of England," in better style, larger type, and finer paper than has heretofore been accessible to readers in this country. Any volume of this edition sold separately.

A few copies still on hand of the Duodecimo Edition. Ten volumes are now ready. Vol. I.—Contains Matilda of Flanders, Matilda of Scotland, Adelicia of Louvaine, Matilda of Boulogne, and Eleanor of Aquitaine. Price 50 cents, in fancy paper. Vol. II.—Berengaria of Navarre, Isabella of Angouleme, Eleanor of Provence, Eleanor of Castile, Marguerite of France, Isabella of France, Philippa of Hainault, and Anne of Bohemia. Price 50 cents. Vol. III.—Isabella of Valois, Joanna of Navarre, Katharine of Valois, Margaret of Anjou, Elizabeth Woodville, and Ann of Warwick. Price 50 cents. Vol. IV.—Elizabeth of York, Katharine of Arragon, Anne Boleyn, Jane Seymour, Anne of Cleves, and Katharine Howard. Price 65 cents. Vol. V.—Katharine Parr and Queen Mary. Price 65 cents. Vol. VI.—Queen Elizabeth. Price 65 cents. Vol. VII.—Queen Elizabeth (continued), and Anne of Denmark. Price 65 cents. Vol. VIII.—Henrietta Maria and Catharine of Braganza. Price 65 cents. Vol. IX.—Mary of Modena. Price 75 cents. Vol. X.—Mary of Modena (continued), and Mary II. Price 75 cents.

Any volume sold separately, or the whole to match in neat green cloth.

JUST PUBLISHED

VOLUME TEN:

CONTAINING

MARY OF MODENA, AND MARY II.

Price 75 cents in fancy paper.—Also, in extra green cloth.

"These volumes have the fascination of a romance united to the integrity of history."—*Times.*

"A most valuable and entertaining work."—*Chronicle.*

"This interesting and well-written work, in which the severe truth of history takes almost the wildness of romance, will constitute a valuable addition to our biographical literature."—*Morning Herald.*

"A valuable contribution to historical knowledge, to young persons especially. It contains a mass of every kind of historical matter of interest, which industry and research could collect. We have derived much entertainment and instruction from the work."—*Athenæum.*

"The execution of this work is equal to the conception. Great pains have been taken to make it both interesting and valuable."—*Literary Gazette.*

"A charming work—full of interest, at once serious and pleasing."—*Monsieur Guizot.*

"A most charming biographical memoir. We conclude by expressing our unqualified opinion, that we know of no more valuable contribution to modern history than this ninth volume of Miss Strickland's Lives of the Queens."—*Morning Herald.*

SCHOOL BOOKS.

SCHMITZ AND ZUMPT'S CLASSICAL SERIES.

VOLUME I.

C. JULII CÆSARIS

COMMENTARII DE BELLO GALLICO.

WITH AN INTRODUCTION, NOTES, AND A GEOGRAPHICAL INDEX IN ENGLISH, ALSO, A MAP OF GAUL, AND ILLUSTRATIVE ENGRAVINGS.

In one handsome 18mo. volume, extra cloth.

This Series has been placed under the editorial management of two eminent scholars and practical teachers, DR. SCHMITZ, Rector of the High School, Edinburgh, and DR. ZUMPT, Professor in the University of Berlin, and will combine the following advantages:—

1. A gradually ascending series of School Books on a uniform plan, so as to constitute within a definite number, a complete Latin Curriculum.

2. Certain arrangements in the rudimentary volumes, which will insure a fair amount of knowledge in Roman literature to those who are not designed for professional life, and who therefore will not require to extend their studies to the advanced portion of the series.

3. The text of each author will be such as has been constituted by the most recent collations of manuscripts, and will be prefaced by biographical and critical sketches in English, that pupils may be made aware of the character and peculiarities of the work they are about to study.

4. To remove difficulties, and sustain an interest in the text, explanatory notes in English will be placed at the foot of each page, and such comparisons drawn as may serve to unite the history of the past with the realities of modern times.

5. The works, generally, will be embellished with maps and illustrative engravings,—accompaniments which will greatly assist the student's comprehension of the nature of the countries and leading circumstances described.

6. The respective volumes will be issued at a price considerably less than that usually charged; and as the texts are from the most eminent sources, and the whole series constructed upon a determinate plan, the practice of issuing new and altered editions, which is complained of alike by teachers and pupils, will be altogether avoided.

From among the testimonials which the publishers have received, they append the following to show that the design of the series has been fully and successfully carried out;—

Central High School, Phila., June 29, 1847

Gentlemen:—
I have been much pleased with your edition of Cæsar's Gallic Wars, being part of Schmitz and Zumpt's classical series for schools. The work seems happily adapted to the wants of learners. The notes contain much valuable information, concisely and accurately expressed, and on the points that really require elucidation, while at the same time the book is not rendered tiresome and expensive by a useless array of mere learning. The text is one in high repute, and your reprint of it is pleasing to the eye. I take great pleasure in commending the publication to the attention of teachers. It will, I am persuaded, commend itself to all who give it a fair examination.

Very Respectfully, Your Obt. Servt.,
JOHN S. HART,
Principal Phila. High School.

To Messrs. Lea & Blanchard.

June 28, 1847.

Gentlemen:—
The edition of "Cæsar's Commentaries," embraced in the Classical Section of Chambers's Educational Course, and given to the world under the auspices of Drs. Schmitz and Zumpt has received from me a candid examination. I have no hesitation in saying, that the design expressed in the notice of the publishers, has been successfully accomplished, and that the work is well calculated to become popular and useful. The *text* appears to be unexceptionable. The *annotations* embrace in condensed form such valuable information, as must not only facilitate the research of the scholar, but also stimulate to further inquiry, without encouraging indolence. This is an important feature in the right prosecution of classical studies, which ought to be more generally understood and appreciated.

H. HAVERSTICK,
Prof. of Ancient Languages, Central High School, Phila.

VOLUME II.

P. VIRGILII MARONIS CARMINA.

NEARLY READY.

SCHOOL BOOKS.

BIRD'S NATURAL PHILOSOPHY.

NEARLY READY.

ELEMENTS OF NATURAL PHILOSOPHY,

BEING AN EXPERIMENTAL INTRODUCTION TO THE PHYSICAL SCIENCES.

ILLUSTRATED WITH OVER THREE HUNDRED WOOD-CUTS.

BY GOLDING BIRD, M.D.,

Assistant Physician to Guy's Hospital.

FROM THE THIRD LONDON EDITION.

In one neat volume.

"By the appearance of Dr. Bird's work, the student has now all that he can desire in one neat, concise, and well-digested volume. The elements of natural philosophy are explained in very simple language, and illustrated by numerous wood-cuts."—*Medical Gazette.*

ARNOTT'S PHYSICS.

ELEMENTS OF PHYSICS; OR, NATURAL PHILOSOPHY,

GENERAL AND MEDICAL.

WRITTEN FOR UNIVERSAL USE, IN PLAIN, OR NON-TECHNICAL LANGUAGE.

BY NIELL ARNOTT, M.D.

A NEW EDITION, BY ISAAC HAYS, M.D.

Complete in one octavo volume, with nearly two hundred wood-cuts.

This standard work has been long and favourably known as one of the best popular expositions of the interesting science it treats of. It is extensively used in many of the first seminaries.

ELEMENTARY CHEMISTRY, THEORETICAL AND PRACTICAL.

BY GEORGE FOWNES, PH. D.,

Chemical Lecturer in the Middlesex Hospital Medical School, &c., &c.

WITH NUMEROUS ILLUSTRATIONS.

EDITED, WITH ADDITIONS,

BY ROBERT BRIDGES, M.D.,

Professor of General and Pharmaceutical Chemistry in the Philadelphia College of Pharmacy, &c., &c.

SECOND AMERICAN EDITION.

In one large duodecimo volume, sheep or extra cloth, with nearly two hundred wood-cuts.

The character of this work is such as to recommend it to all colleges and academies in want of a text-book. It is fully brought up to the day, containing all the late views and discoveries that have so entirely changed the face of the science, and it is completely illustrated with very numerous wood engravings, explanatory of all the different processes and forms of apparatus. Though strictly scientific, it is written with great clearness and simplicity of style, rendering it easy to be comprehended by those who are commencing the study.

It may be had well bound in leather, or neatly done up in strong cloth. Its low price places it within the reach of all.

BREWSTER'S OPTICS.

ELEMENTS OF OPTICS,

BY SIR DAVID BREWSTER.

WITH NOTES AND ADDITIONS, BY A. D. BACHE, LL.D.

Superintendent of the Coast Survey, &c.

In one volume, 12mo., with numerous wood-cuts.

SCHOOL BOOKS.

BOLMAR'S FRENCH SERIES.

New editions of the following works, by A. Bolmar, forming, in connection with "Bolmar's Levizac," a complete series for the acquisition of the French language.

A SELECTION OF ONE HUNDRED PERRIN'S FABLES,
ACCOMPANIED BY A KEY,

Containing the text, a literal and free translation, arranged in such a manner as to point out the difference between the French and English idiom, &c., in 1 vol., 12mo.

A COLLECTION OF COLLOQUIAL PHRASES,
ON EVERY TOPIC NECESSARY TO MAINTAIN CONVERSATION,

Arranged under different heads, with numerous remarks on the peculiar pronunciation and uses of various words; the whole so disposed as considerably to facilitate the acquisition of a correct pronunciation of the French, in 1 vol., 18mo.

LES AVENTURES DE TELEMAQUE PAR FENELON,

In 1 vol., 12mo., accompanied by a Key to the first eight books, in 1 vol., 12mo., containing, like the Fables, the text, a literal and free translation, intended as a sequel to the Fables. Either volume sold separately.

ALL THE FRENCH VERBS,

Both regular and irregular, in a small volume.

MULLER'S PHYSICS.

NEARLY READY.

PRINCIPLES OF PHYSICS AND METEOROLOGY,

BY J. MULLER,

Professor of Physics at the University of Frieburg.

ILLUSTRATED WITH NEARLY FIVE HUNDRED AND FIFTY ENGRAVINGS ON WOOD, AND TWO COLORED PLATES.

In one octavo volume.

This Edition is improved by the addition of various articles, and will be found in every respect brought up to the time of publication.

"The Physics of Muller is a work, superb, complete, unique: the greatest want known to English Science could not have been better supplied. The work is of surpassing interest. The value of this contribution to the scientific records of this country may be duly estimated by the fact, that the cost of the original drawings and engravings alone has exceeded the sum of 2000*l*."—*Lancet*, March, 1847.

BUTLER'S ANCIENT ATLAS.

AN ATLAS OF ANCIENT GEOGRAPHY,

BY SAMUEL BUTLER, D.D.,

Late Lord Bishop of Litchfield,

CONTAINING TWENTY-ONE COLOURED MAPS, AND A COMPLETE ACCENTUATED INDEX.

In one octavo volume, half-bound.

BUTLER'S ANCIENT GEOGRAPHY.

GEOGRAPHIA CLASSICA,

OR, THE APPLICATION OF ANCIENT GEOGRAPHY TO THE CLASSICS

BY SAMUEL BUTLER, D.D., F.R.S.

REVISED BY HIS SON.

FIFTH AMERICAN, FROM THE LAST LONDON EDITION,

WITH QUESTIONS ON THE MAPS, BY JOHN FROST.

In one duodecimo volume, half-bound, to match the Atlas.

SCHOOL BOOKS.

WHITE'S UNIVERSAL HISTORY.

LATELY PUBLISHED,

ELEMENTS OF UNIVERSAL HISTORY,

ON A NEW AND SYSTEMATIC PLAN;

FROM THE EARLIEST TIMES TO THE TREATY OF VIENNA; TO WHICH IS ADDED, A SUMMARY OF THE LEADING EVENTS SINCE THAT PERIOD, FOR THE USE OF SCHOOLS AND PRIVATE STUDENTS.

BY H. WHITE, B.A.,

TRINITY COLLEGE, CAMBRIDGE.

WITH ADDITIONS AND QUESTIONS,

BY JOHN S. HART, A.M.,

Principal of the Philadelphia High School, and Professor of Moral and Mental Science, &c., &c.

In one volume, large duodecimo, neatly bound with Maroon Backs.

This work is arranged on a new plan, which is believed to combine the advantages of those formerly in use. It is divided into three parts, corresponding with Ancient, Middle, and Modern History; which parts are again subdivided into centuries, so that the various events are presented in the order of time, while it is so arranged that the annals of each country can be read consecutively, thus combining the advantages of both the plans hitherto pursued in works of this kind. To guide the researches of the student, there will be found numerous synoptical tables, with remarks and sketches of literature, antiquities, and manners, at the great chronological epochs.

The additions of the American editor have been principally confined to the chapters on the history of this country. The series of questions by him will be found of use to those who prefer that system of instruction. For those who do not, the publishers have had an edition prepared without the questions.

This work has already passed through several editions, and has been introduced into many of the higher Schools and Academies throughout the country. From among numerous recommendations which they have received, the publishers annex the following from the Deputy Superintendent of Common Schools for New York:

Secretary's Office,
Department of Common Schools. } State of New York.
Albany, Oct. 14th, 1845.

Messrs. Lea & Blanchard:

Gentlemen:—I have examined the copy of "White's Universal History," which you were so obliging as to send me, and cheerfully and fully concur in the commendations of its value, as a comprehensive and enlightened survey of the Ancient and Modern World which many of the most competent judges have, as I perceive, already bestowed upon it. It appears to me to be admirably adapted to the purposes of our public schools; and I unhesitatingly approve of its introduction into those seminaries of elementary instruction.

Very respectfully, your obedient servant,
SAMUEL S. RANDALL,
Deputy Superintendent Common Schools.

This work is admirably calculated for District and other libraries: an edition for that purpose without questions has been prepared, done up in strong cloth.

HERSCHELL'S ASTRONOMY.

A TREATISE ON ASTRONOMY,

BY SIR JOHN F. W. HERSCHELL, F. R. S., &c.

WITH NUMEROUS PLATES AND WOOD-CUTS.

A NEW EDITION, WITH A PREFACE AND A SERIES OF QUESTIONS,

BY S. C. WALKER.

In one volume, 12mo.

ROSCOE'S LIVES OF THE KINGS OF ENGLAND.

TO MATCH MISS STRICKLAND'S "QUEENS."

VOLUME ONE, CONTAINING THE

LIFE OF WILLIAM THE CONQUEROR.

In neat royal duodecimo, extra cloth, or fancy paper.

"The historical reader will find this a work of peculiar interest. It displays throughout the most pains-taking research, and a style of narrative which has all the lucidity and strength of Gibbon. It is a work with which, shedding such a light as we are justified in saying it will do upon English history, every library ought to be provided."—*Sunday Times.*

MEMOIRS OF THE LOVES OF THE POETS.

Biographical Sketches of Women celebrated in Ancient and Modern Poetry.

BY MRS. JAMIESON.

In one royal duodecimo volume, price 75 cents.

FREDERICK THE GREAT, HIS COURT AND TIMES.

EDITED, WITH AN INTRODUCTION, BY THOMAS CAMPBELL, ESQ., AUTHOR OF THE "PLEASURES OF HOPE."

Second Series, in two duodecimo volumes, extra cloth.

HISTORY OF CONGRESS,

EXHIBITING A CLASSIFICATION OF THE PROCEEDINGS OF THE SENATE AND THE HOUSE OF REPRESENTATIVES, FROM 1789 TO 1793, EMBRACING THE FIRST TERM OF THE ADMINISTRATION OF GENERAL WASHINGTON.

In one large octavo volume of over 700 pages, price only $1.50.

MOORE'S IRELAND—NOW COMPLETE.

THE HISTORY OF IRELAND,

FROM THE EARLIEST KINGS OF THAT REALM DOWN TO ITS LATEST CHIEFS.

In two octavo volumes, extra cloth.

Mr. Moore has at length completed his History of Ireland containing the most troubled and interesting periods through which it has passed. Those who have possessed themselves of the work as far as the Great Expedition against Scotland in 1545, can procure the second volume separate.

HISTORY OF THE WAR IN FRANCE AND BELGIUM IN 1815,

CONTAINING MINUTE DETAILS OF THE BATTLES OF QUATRE-BRAS, LIGNY, WAVRE AND WATERLOO.

BY CAPTAIN W. SIBORNE.

In one octavo volume, with Maps and Plans of Battles, &c., viz.:

1. Part of Belgium, indicating the distribution of the armies on commencing hostilities. 2. Field of Quatre-Bras, at 3 o'clock, P. M. 3. Field of Quatre-Bras, at 7 o'clock, P. M. 4. Field of Ligny, at a quarter past 2 o'clock, P. M. 5. Field of Ligny, at half past 8 o'clock, P. M. 6. Field of Waterloo, at a quarter past 11 o'clock, A. M. 7. Field of Waterloo, at a quarter before 8 o'clock, P. M. 8. Field of Waterloo, at 5 minutes past 8 o'clock, P. M. 9. Field of Wavre, at 4 o'clock, P. M., 18th June. 10. Field of Wavre, at 4 o'clock, A. M., 19th June. 11. Part of France, on which is shown the advance of the Allied Armies into the Kingdom.

TEXT BOOK OF ECCLESIASTICAL HISTORY.

BY J. C. I GIESELER, PROFESSOR OF THEOLOGY IN GOTTINGEN. TRANSLATED FROM THE THIRD GERMAN EDITION, BY F. CUNNINGHAM.

In three octavo volumes, containing over 1200 large pages.

ELEMENTS OF UNIVERSAL HISTORY,

ON A NEW AND SYSTEMATIC PLAN, FROM THE EARLIEST TIMES TO THE TREATY OF VIENNA, TO WHICH IS ADDED A SUMMARY OF THE LEADING EVENTS SINCE THAT PERIOD.

BY H. WHITE, B.A.

SIXTH AMERICAN EDITION, WITH ADDITIONS

BY JOHN S. HART, A.M.

In one large royal 12mo. volume, neat extra cloth.

GRAHAME'S COLONIAL HISTORY.

HISTORY OF THE UNITED STATES.

FROM THE PLANTATION OF THE BRITISH COLONIES TILL THEIR ASSUMPTION OF INDEPENDENCE.

SECOND AMERICAN EDITION,

ENLARGED AND AMENDED,

WITH A MEMOIR BY PRESIDENT QUINCY.

IN TWO LARGE OCTAVO VOLUMES, EXTRA CLOTH,

WITH A PORTRAIT.

This work having assumed the position of a standard history of this country, the publishers have been induced to issue an edition in smaller size and at a less cost, that its circulation may be commensurate with its merits. It is now considered as the most impartial and trustworthy history that has yet appeared.

A few copies of the edition in four volumes, on extra fine thick paper, price eight dollars, may still be had by gentlemen desirous of procuring a beautiful work for their libraries.

"It is universally known to literary men as, in its original form, one of the earliest histories of this country, and certainly one of the best ever written by a foreigner. It has been constantly and copiously used by every one who has, since its appearance, undertaken the history of this country. In the course of the memoir prefixed to it, it is vindicated from the aspersions cast on it by Mr. Bancroft, who, nevertheless, has derived from it a vast amount of the information and documentary material of his own ambitious, able and extended work. It is issued in two volumes, and cannot fail to find its way to every library of any pretensions.—*New York Courier and Enquirer.*

COOPER'S NAVAL HISTORY.

HISTORY OF THE NAVY OF THE UNITED STATES OF AMERICA,

BY J. FENIMORE COOPER.

THIRD EDITION, WITH CORRECTIONS AND ADDITIONS.

Complete, two volumes in one, neat extra cloth,

With a Portrait of the Author, Two Maps, and Portraits of PAUL JONES, BAINBRIDGE, DALE, PREBLE, DECATUR, PORTER, PERRY, AND MCDONOUGH.

WRAXALL'S HISTORICAL MEMOIRS.

HISTORICAL MEMOIRS OF MY OWN TIMES,

BY SIR N. W. WRAXALL.

ONE NEAT VOLUME, EXTRA CLOTH.

This is the work for which, in consequence of too truthful a portraiture of Catherine II., the author was imprisoned and fined. Taught by this experience, his succeeding memoirs he suppressed until after his death.

WRAXALL'S POSTHUMOUS MEMOIRS.

POSTHUMOUS MEMOIRS OF HIS OWN TIMES,

BY SIR N. W. WRAXALL.

IN ONE VOLUME, EXTRA CLOTH.

This work contains much secret and amusing anecdote of the prominent personages of the day, which rendered its posthumous publication necessary

WALPOLE'S LETTERS AND MEMOIRS.

THE LETTERS OF HORACE WALPOLE, EARL OF ORFORD,
CONTAINING NEARLY THREE HUNDRED LETTERS.
NOW FIRST PUBLISHED FROM THE ORIGINALS, AND FORMING AN UNINTERRUPTED SERIES FROM 1735 TO 1797.
In four large octavo volumes, with a portrait of the Author.

SUPPRESSED LETTERS.

THE LETTERS OF HORACE WALPOLE, EARL OF ORFORD,
TO SIR HORACE MANN, FROM 1760 TO 1785.
NOW FIRST PUBLISHED FROM THE ORIGINAL MSS.
In two octavo volumes, to match the above.

WALPOLE'S GEORGE THE THIRD.

MEMOIRS OF THE REIGN OF KING GEORGE THE THIRD,
BY HORACE WALPOLE.
NOW FIRST PUBLISHED FROM THE ORIGINAL MSS.
EDITED, WITH NOTES,
BY SIR DENIS LE MARCHANT.

These Memoirs comprise the first twelve years of the reign of George III.; and recommend themselves especially to the reader in this country, as containing an account of the early troubles with America. They form a sequel to the "Memoirs of George the Second," by the same author.

BROWNING'S HUGUENOTS.

HISTORY OF THE HUGUENOTS—A NEW EDITION,
CONTINUED TO THE PRESENT TIME.
BY W. S. BROWNING.
In one large octavo volume, extra cloth.

"One of the most interesting and valuable contributions to modern history."—*Gentleman's Magazine.*

"Not the least interesting portion of the work has reference to the violence and persecutions of 1815."—*Times.*

INGERSOLL'S LATE WAR.

HISTORICAL SKETCH OF THE SECOND WAR BETWEEN THE UNITED STATES OF AMERICA AND GREAT BRITAIN, DECLARED BY ACT OF CONGRESS, JUNE 18, 1812, AND CONCLUDED BY PEACE, FEBRUARY 15, 1815.
BY CHARLES J. INGERSOLL.
One volume octavo of 516 pages, embracing the events of 1812—1813.
Beautifully printed, and done up in neat extra cloth.

RUSH'S COURT OF LONDON.

MEMORANDA OF A RESIDENCE AT THE COURT OF LONDON,
COMPRISING INCIDENTS OFFICIAL AND PERSONAL, FROM 1819 TO 1825;
INCLUDING NEGOTIATIONS ON THE OREGON QUESTION, AND OTHER UNSETTLED RELATIONS BETWEEN THE UNITED STATES AND GREAT BRITAIN.
BY RICHARD RUSH,
Envoy Extraordinary and Minister Plenipotentiary from the United States, from 1817 to 1825
In one large and beautiful octavo volume, extra cloth.

NIEBUHR'S ROME.

THE HISTORY OF ROME,

BY B. G. NIEBUHR.

COMPLETE IN TWO LARGE OCTAVO VOLUMES.

Done up in extra cloth; or five parts, paper, price $1.00 each.

The last three parts of this valuable book have never before been published in this country, having only lately been printed in Germany, and translated in England. The two last of these comprise Professor Niebuhr's Lectures on the latter part of Roman History, so long lost to the world.

"It is an unexpected surprise and pleasure to the admirers of Niebuhr—that is, to all earnest students of ancient history—to recover, as from the grave, the lectures before us."—*Eclectic Review.*

"The world has now in Niebuhr an imperishable model."—*Edinburgh Review, Jan.* 1844.

"Here we close our remarks upon this memorable work, a work which, of all that have appeared in our age, is the best fitted to excite men of learning to intellectual activity: from which the most accomplished scholar may gather fresh stores of knowledge, to which the most experienced politician may resort for theoretical and practical instruction, and which no person can read as it ought to be read, without feeling the better and more generous sentiments of his common human nature enlivened and strengthened."—*Edinburgh Review.*

"It is since I saw you that I have been devouring with the most intense admiration the third volume of Niebuhr. The clearness and comprehensiveness of all his military details is a new feature in that wonderful mind, and how inimitably beautiful is that brief account of Terni."—*Dr Arnold* (Life, vol. ii.)

PROFESSOR RANKE'S HISTORICAL WORKS.

HISTORY OF THE POPES,

THEIR CHURCH AND STATE, IN THE SIXTEENTH AND SEVENTEENTH CENTURIES.

BY LEOPOLD RANKE.

TRANSLATED FROM THE LAST EDITION OF THE GERMAN, BY WALTER K. KELLY, ESQ., B. A.

In two parts, paper, at $1.00 each, or one large volume, extra cloth.

"A book extraordinary for its learning and impartiality, and for its just and liberal views of the times it describes. The best compliment that can be paid to Mr. Ranke, is, that each side has accused him of partiality to its opponent; the German Protestants complaining that his work is written in too Catholic a spirit;—the Catholics declaring, that generally impartial as he is, it is clear to perceive the Protestant tendency of the history."—*London Times.*

THE TURKISH AND SPANISH EMPIRES,

IN THE SIXTEENTH CENTURY AND BEGINNING OF THE SEVENTEENTH,

BY PROFESSOR LEOPOLD RANKE.

TRANSLATED FROM THE LAST EDITION OF THE GERMAN, BY WALTER K. KELLY, ESQ.

Complete in one part, paper, price 75 cents.

This work was published by the author in connexion with the "History of the Popes," under the name of "Sovereigns and Nations of Southern Europe, in the Sixteenth and Seventeenth Centuries." It may be used separately, or bound up with that work, for which purpose two titles will be found in it.

HISTORY OF THE REFORMATION IN GERMANY,

BY PROFESSOR LEOPOLD RANKE.

PARTS FIRST, SECOND AND THIRD NOW READY.

TRANSLATED FROM THE SECOND EDITION, BY SARAH AUSTIN.

To be completed in Five parts, each part containing one volume of the London edition.

"Few modern writers possess such qualifications for doing justice to so great a subject as Leopold Ranke.—Indefatigable in exertions, he revels in the toil of examining archives and state papers: honest in purpose, he shapes his theories from evidence; not like D'Aubigne, whose romance of the Reformation selects evidence to support preconceived theory. Ranke never forgets the statesman in the theologian, or the historian in the partisan."—*Athenæum.*

BROUGHAM ON THE FRENCH REVOLUTION.

One volume 12mo., paper, price 50 cents.

STUDIES OF THE LIFE OF WOMAN.

FROM THE FRENCH OF MADAME NECKER DE SAUSSURE.

In one neat 12mo. volume, fancy paper. Price 75 cents.

THE EDUCATION OF MOTHERS; OR, CIVILIZATION OF MANKIND BY WOMEN.

FROM THE FRENCH OF L. AIME MARTIN.

In one 12mo. volume, paper, price 75 cents; or in extra cloth.

POPULAR SCIENCE.

PHILOSOPHY IN SPORT, MADE SCIENCE IN EARNEST,

BEING AN ATTEMPT TO ILLUSTRATE THE FIRST PRINCIPLES OF NATURAL PHILOSOPHY, BY THE AID OF THE POPULAR TOYS AND SPORTS OF YOUTH.

FROM THE SIXTH AND GREATLY IMPROVED LONDON EDITION.

In one very neat royal 18mo. volume, with nearly one hundred illustrations on wood. Fine extra crimson cloth.

"Messrs. Lea & Blanchard have issued, in a beautiful manner, a handsome book, called 'Philosophy in Sport, made Science in Earnest.' This is an admirable attempt to illustrate the first principles of Natural Philosophy, by the aid of the popular toys and sports of youth. Useful information is conveyed in an easy, graceful, yet dignified manner, and rendered easy to the simplest understanding. The book is an admirable one, and must meet with universal favour."—*N. Y. Evening Mirror.*

ENDLESS AMUSEMENT.

JUST ISSUED.

ENDLESS AMUSEMENT,

A COLLECTION OF

NEARLY FOUR HUNDRED ENTERTAINING EXPERIMENTS IN VARIOUS BRANCHES OF SCIENCE,

INCLUDING

ACOUSTICS, ARITHMETIC, CHEMISTRY, ELECTRICITY, HYDRAULICS, HYDROSTATICS, MAGNETISM, MECHANICS, OPTICS, WONDERS OF THE AIR PUMP, ALL THE POPULAR TRICKS AND CHANGES OF THE CARDS, &c., &c.

TO WHICH IS ADDED,

A COMPLETE SYSTEM OF PYROTECHNY,

OR THE ART OF MAKING FIRE-WORKS:

THE WHOLE SO CLEARLY EXPLAINED AS TO BE WITHIN REACH OF THE MOST LIMITED CAPACITY.

WITH ILLUSTRATIONS.

FROM THE SEVENTH LONDON EDITION.

In one neat royal 18mo. volume, fine extra crimson cloth.

This work has long supplied instructive amusement to the rising generations in England, and will doubtless be hailed with pleasure by those of this country who like (and what boy does not) the marvellous tricks and changes, experiments and wonders afforded by the magic of science and jugglery.

CHEMISTRY OF THE FOUR SEASONS,

SPRING, SUMMER, AUTUMN, AND WINTER.

AN ESSAY, PRINCIPALLY CONCERNING NATURAL PHENOMENA, ADMITTING OF INTERPRETATION BY CHEMICAL SCIENCE, AND ILLUSTRATING PASSAGES OF SCRIPTURE.

BY THOMAS GRIFFITHS,

PROFESSOR OF CHEMISTRY IN THE MEDICAL COLLEGE OF ST. BARTHOLOMEW'S HOSPITAL, ETC.

In one large royal 12mo. volume, with many Wood-Cuts, extra cloth.

"Chemistry is assuredly one of the most useful and interesting of the natural sciences. Chemical changes meet us at every step, and during every season, the winds and the rain, the heat and the frosts, each have their peculiar and appropriate phenomena. And those who have hitherto remained insensible to these changes and unmoved amid such remarkable, and often startling results, will lose their apathy upon reading the Chemistry of the 'Four Seasons,' and be prepared to enjoy the highest intellectual pleasures. Conceived in a happy spirit, and written with taste and elegance, the essay of Mr. Griffiths cannot fail to receive the admiration of cultivated minds; and those who have looked less carefully into nature's beauties, will find themselves led on step by step, until they realize a new intellectual being. Such works, we believe, exert a happy influence over society, and hence we hope that the present one may be extensively read."—*The Western Lancet.*

POPULAR SCIENCE.

KIRBY AND SPENCE'S ENTOMOLOGY, FOR POPULAR USE.

AN INTRODUCTION TO ENTOMOLOGY;

OR, ELEMENTS OF THE NATURAL HISTORY OF INSECTS; COMPRISING AN ACCOUNT OF NOXIOUS AND USEFUL INSECTS, OF THEIR METAMORPHOSES, FOOD, STRATAGEMS, HABITATIONS, SOCIETIES, MOTIONS, NOISES, HYBERNATION, INSTINCT, &c., &c.

With Plates, Plain or Colored.

BY WILLIAM KIRBY, M.A., F.R.S., AND WILLIAM SPENCE, ESQ., F.R.S.

FROM THE SIXTH LONDON EDITION, WHICH WAS CORRECTED AND CONSIDERABLY ENLARGED.

In one large octavo volume, extra cloth.

"We have been greatly interested in running over the pages of this treatise. There is scarcely, in the wide range of natural science, a more interesting or instructive study than that of insects, or one than is calculated to excite more curiosity or wonder.

"The popular form of letters is adopted by the authors in imparting a knowledge of the subject, which renders the work peculiarly fitted for our district school libraries, which are open to all ages and classes."—*Hunt's Merchants' Magazine.*

ANSTED'S ANCIENT WORLD.

JUST ISSUED.

THE ANCIENT WORLD, OR, PICTURESQUE SKETCHES OF CREATION.

BY D. T. ANSTED, M.A., F.R.S., F.G.S., &c.

PROFESSOR OF GEOLOGY IN KING'S COLLEGE, LONDON.

In one very neat volume, fine extra cloth, with about One Hundred and Fifty Illustrations.

The object of this work is to present to the general reader the chief results of Geological investigation in a simple and comprehensive manner. The author has avoided all minute details of geological formations and particular observations, and has endeavoured as far as possible to present striking views of the wonderful results of the science, divested of its mere technicalities. The work is got up in a handsome manner, with numerous illustrations, and forms a neat volume for the centre table.

GEOLOGY AND MINERALOGY,

WITH INSTRUCTIONS FOR THE QUALITATIVE ANALYSIS OF MINERALS.

BY JOSHUA TRIMMER, F.G.S.

With two Hundred and Twelve Wood-Cuts, a handsome octavo volume, bound in embossed cloth.

This is a systematic introduction to Mineralogy, and Geology, admirably calculated to instruct the student in those sciences. The organic remains of the various formations are well illustrated by numerous figures, which are drawn with great accuracy.

NEW AND COMPLETE MEDICAL BOTANY.

NOW READY.

MEDICAL BOTANY,

OR, A DESCRIPTION OF ALL THE MORE IMPORTANT PLANTS USED IN MEDICINE, AND OF THEIR PROPERTIES, USES AND MODES OF ADMINISTRATION.

BY R. EGLESFELD GRIFFITH, M.D., &c., &c.

In one large octavo volume. With about three hundred and fifty Illustrations on Wood.

A POPULAR TREATISE ON VEGETABLE PHYSIOLOGY;

PUBLISHED UNDER THE AUSPICES OF THE SOCIETY FOR THE PROMOTION OF POPULAR INSTRUCTION; WITH NUMEROUS WOOD-CUTS.

BY W. B. CARPENTER.

In one volume, 12mo., extra cloth.

A TREATISE ON COMPARATIVE ANATOMY AND PHYSIOLOGY,

BY W. B. CARPENTER.

REVISED AND MUCH IMPROVED BY THE AUTHOR. WITH BEAUTIFUL STEEL PLATES.

(Now preparing.)

CARPENTER'S ANIMAL PHYSIOLOGY,

WITH ABOUT THREE HUNDRED WOOD-CUTS.

(Preparing.)

HUMAN HEALTH:

OR, THE INFLUENCE OF ATMOSPHERE AND LOCALITY, CHANGE OF AIR AND CLIMATE, SEASONS, FOOD, CLOTHING, BATHING, MINERAL SPRINGS, EXERCISE, SLEEP, CORPOREAL AND MENTAL PURSUITS, &c., &c., ON HEALTHY MAN,

CONSTITUTING ELEMENTS OF HYGIENE.

BY ROBLEY DUNGLISON, M.D., &c., &c.

In one octavo volume.

*** Persons in the pursuit of health, as well as those who desire to retain it, would do well to examine this work. The author states the work has been prepared "to enable the general reader to understand the nature of the actions of various influences on human health, and assist him in adopting such means as may tend to its preservation: hence the author has avoided introducing technicalities, except where they appeared to him indispensable."

REMARKS ON THE INFLUENCE OF MENTAL EXCITEMENT, AND MENTAL CULTIVATION UPON HEALTH.

BY A. BRIGHAM, M.D.

Third edition; one volume, 18mo.

A TREATISE ON

CORNS, BUNIONS, THE DISEASES OF THE NAILS, AND THE GENERAL MANAGEMENT OF THE FEET.

BY LEWIS DURLACHER,

SURGEON CHIROPODIST TO THE QUEEN.

In one duodecimo volume, cloth.

BRIDGEWATER TREATISES.

The whole complete in 7 vols. 8vo., various bindings,

CONTAINING:

ROGET'S ANIMAL AND VEGETABLE PHYSIOLOGY, in 2 vols., with many cuts.

KIRBY ON THE HISTORY, HABITS AND INSTINCT OF ANIMALS, 1 vol., with plates.

PROUT ON CHEMISTRY—CHALMERS ON THE MORAL CONDITION OF MAN—WHEWELL ON ASTRONOMY—BELL ON THE HAND—KIDD ON THE PHYSICAL CONDITION OF MAN, 2 volumes.

BUCKLAND'S GEOLOGY, 2 vols., with numerous plates and maps.

Roget, Buckland, and Kirby are sold separate.

THE DOMESTIC MANAGEMENT OF THE SICK ROOM,

NECESSARY, IN AID OF MEDICAL TREATMENT, FOR THE CURE OF DISEASES.

BY A. T. THOMSON, M.D., &c. &c.

First American, from the Second London Edition. Edited by R. E. GRIFFITH, M. D.

In one royal 12mo. volume, extra cloth, with cuts.

"There is no interference with the duties of the medical attendant, but sound, sensible, and clear advice what to do, and how to act, so as to meet unforeseen emergencies, and co-operate with professional skill."—*Literary Gazette.*

THE MILLWRIGHT AND MILLER'S GUIDE.

BY OLIVER EVANS.

THE ELEVENTH EDITION,

WITH ADDITIONS AND CORRECTIONS, BY THE PROFESSOR OF MECHANICS IN THE FRANKLIN INSTITUTE OF PENNSYLVANIA,

AND A DESCRIPTION OF AN IMPROVED MERCHANT FLOUR MILL.

WITH ENGRAVINGS.

BY C. & O. EVANS, ENGINEERS.

This is a practical work, and has had a very extended sale.

JOHNSON AND LANDRETH ON FRUIT, KITCHEN, AND FLOWER GARDENING.

A DICTIONARY OF MODERN GARDENING,

BY GEORGE WILLIAM JOHNSON, ESQ.

Author of the "Principles of Practical Gardening," "The Gardener's Almanac," &c.

WITH ONE HUNDRED AND EIGHTY WOOD-CUTS.

EDITED, WITH NUMEROUS ADDITIONS, BY DAVID LANDRETH, OF PHILADELPHIA.

In one large royal duodecimo volume, extra cloth, of nearly Six Hundred and Fifty double columned Pages.

This edition has been greatly altered from the original. Many articles of little interest to Americans have been curtailed or wholly omitted, and much new matter, with numerous illustrations, added, especially with respect to the varieties of fruit which experience has shown to be peculiarly adapted to our climate. Still, the editor admits that he has only followed in the path so admirably marked out by Mr. Johnson, to whom the chief merit of the work belongs. It has been an object with the editor and publishers to increase its popular character, thereby adapting it to the larger class of horticultural readers in this country, and they trust it will prove what they have desired it to be, an Encyclopædia of Gardening, if not of Rural Affairs, so condensed and at such a price as to be within reach of nearly all whom those subjects interest.

"This is a useful compendium of all that description of information which is valuable to the modern gardener. It quotes largely from the best standard authors, journals, and transactions of societies; and the labours of the American editor have fitted it for the United States, by judicious additions and omissions. The volume is abundantly illustrated with figures in the text, embracing a judicious selection of those varieties of fruits which experience has shown to be well suited to the United States.—*Silliman's Journal.*

"This is the most valuable work we have ever seen on the subject of gardening; and no man of taste who can devote even a quarter of an acre to horticulture ought to be without it. Indeed ladies who merely cultivate flowers *within-doors*, will find this book an excellent and convenient counsellor. It contains one hundred and eighty wood-cut illustrations, which give a distinct idea of the fruits and garden-arrangements they are intended to represent.

"Johnson's Dictionary of Gardening, edited by Landreth, is handsomely printed, well-bound, and sold at a price which puts it within the reach of all who would be likely to buy it."—*Evergreen.*

THE COMPLETE FLORIST.

A MANUAL OF GARDENING,

CONTAINING PRACTICAL INSTRUCTION FOR THE MANAGEMENT OF GREENHOUSE PLANTS, AND FOR THE CULTIVATION OF THE SHRUBBERY—THE FLOWER GARDEN, AND THE LAWN—WITH DESCRIPTIONS OF THOSE PLANTS AND TREES MOST WORTHY OF CULTURE IN EACH DEPARTMENT.

WITH ADDITIONS AND AMENDMENTS,

ADAPTED TO THE CLIMATE OF THE UNITED STATES.

In one small volume. Price only Twenty-five Cents.

THE COMPLETE KITCHEN AND FRUIT GARDENER.

A SELECT MANUAL OF KITCHEN GARDENING,

AND THE CULTURE OF FRUITS,

CONTAINING FAMILIAR DIRECTIONS FOR THE MOST APPROVED PRACTICE IN EACH DEPARTMENT, DESCRIPTIONS OF MANY VALUABLE FRUITS, AND A CALENDAR OF WORK TO BE PERFORMED EACH MONTH IN THE YEAR.

THE WHOLE ADAPTED TO THE CLIMATE OF THE UNITED STATES.

In one small volume, paper. Price only Twenty-five Cents.

LANDRETH'S RURAL REGISTER AND ALMANAC, FOR 1848,

WITH NUMEROUS ILLUSTRATIONS.

STILL ON HAND,

A FEW COPIES OF THE REGISTER FOR 1847,

WITH OVER ONE HUNDRED WOOD-CUTS.

This work has 150 large 12mo. pages, double columns. Though published annually, and containing an almanac, the principal part of the matter is of permanent utility to the horticulturist and farmer.

LAW BOOKS.

HILLIARD ON REAL ESTATE.

NOW READY.

THE AMERICAN LAW OF REAL PROPERTY.

SECOND EDITION, REVISED, CORRECTED, AND ENLARGED.

BY FRANCIS HILLIARD,

COUNSELLOR AT LAW.

In two large octavo volumes, beautifully printed, and bound in best law sheep.

This book is designed as a substitute for *Cruise's Digest*, occupying the same ground in American law which that work has long covered in the English law. It embraces all that portion of the English Law of Real Estate which has any applicability in this country; and at the same time it embodies the statutory provisions and adjudged cases of all the States upon the same subject; thereby constituting a complete elementary treatise for American students and practitioners. The plan of the work is such as to render it equally valuable in all the States, embracing, as it does, the peculiar modifications of the law alike in MASSACHUSETTS and MISSOURI, NEW YORK and MISSISSIPPI. In this edition, the statutes and decisions subsequent to the former one, which are very numerous, have all been incorporated, thus making it one-third larger than the original work, and bringing the view of the law upon the subject treated quite down to the present time. The book is recommended in the highest terms by distinguished jurists of different States, as will be seen by the subjoined extracts.

"The work before us supplies this deficiency in a highly satisfactory manner. It is beyond all question the best work of the kind that we now have, and although we doubt whether this or any other work will be likely to supplant Cruise's Digest, we do not hesitate to say, that of the two, this is the more valuable to the American lawyer. We congratulate the author upon the successful accomplishment of the arduous task he undertook, in reducing the vast body of the American Law of Real Property to 'portable size,' and we do not doubt that his labours will be duly appreciated by the profession."—*Law Reporter, Aug.*, 1846.

Judge Story says:—"I think the work a very valuable addition to our present stock of juridical literature. It embraces all that part of Mr. Cruise's Digest which is most useful to American lawyers. But its higher value is, that it presents in a concise, but clear and exact form, the substance of American Law on the same subject. *I know no work that we possess, whose practical utility is likely to be so extensively felt.*" "The wonder is, that the author has been able to bring so great a mass into so condensed a text, at once comprehensive and lucid."

Chancellor Kent says of the work (Commentaries, vol. ii., p. 635, note, 5th edition):—"It is a work of great labour and intrinsic value."

Hon. Rufus Choate says:—"Mr. Hilliard's work has been for three or four years in use, and I think that Mr. Justice Story and Chancellor Kent express the general opinion of the Massachusetts Bar."

Professor Greenleaf says:—"I had already found the first edition a very convenient book of reference, and do not doubt, from the appearance of the second, that it is greatly improved."

Professor J. H. Townsend, of Yale College, says:—

"I have been acquainted for several years with the first edition of Mr. Hilliard's Treatise, and have formed a very favourable opinion of it. I have no doubt the second edition will be found even more valuable than the first, and I shall be happy to recommend it as I may have opportunity. I know of no other work on the subject of Real Estate, so comprehensive and so well adapted to the state of the law in this country."

LAW BOOKS.

ADDISON ON CONTRACTS.

A TREATISE ON THE LAW OF CONTRACTS AND RIGHTS AND LIABILITIES EX CONTRACTU.

BY C. G. ADDISON, ESQ.,

Of the Inner Temple, Barrister at Law.

In one volume, octavo, handsomely bound in law sheep.

In this treatise upon the most constantly and frequently administered branch of law, the author has collected, arranged and developed in an intelligible and popular form, the rules and principles of the Law of Contracts, and has supported, illustrated or exemplified them by references to nearly four thousand adjudged cases. It comprises the Rights and Liabilities of Seller and Purchaser; Landlord and Tenant; Letter and Hirer of Chattels; Borrower and Lender; Workman and Employer; Master, Servant and Apprentice; Principal, Agent and Surety; Husband and Wife; Partners; Joint Stock Companies; Corporations; Trustees; Provisional Committeemen; Shipowners; Shipmasters; Innkeepers; Carriers; Infants; Lunatics, &c.

WHEATON'S INTERNATIONAL LAW.

ELEMENTS OF INTERNATIONAL LAW.

BY HENRY WHEATON, LL. D.,

Minister of the United States at the Court of Russia, &c.

THIRD EDITION, REVISED AND CORRECTED.

In one large and beautiful octavo volume of 650 pages, extra cloth, or fine law sheep.

"Mr. Wheaton's work is indispensable to every diplomatist, statesman and lawyer, and necessary indeed to all public men. To every philosophic and liberal mind, the study must be an attractive, and in the hands of our author it is a delightful one."—*North American.*

HILL ON TRUSTEES.

A PRACTICAL TREATISE ON THE LAW RELATING TO TRUSTEES,

THEIR POWERS, DUTIES, PRIVILEGES AND LIABILITIES.

BY JAMES HILL, ESQ.,

Of the Inner Temple, Barrister at Law.

EDITED BY FRANCIS J. TROUBAT,

Of the Philadelphia Bar.

In one large octavo volume, best law sheep, raised bands.

"The editor begs leave to iterate the observation made by the author that the work is intended principally for the instruction and guidance of trustees. That single feature very much enhances its practical value."

ON THE PRINCIPLES OF CRIMINAL LAW.

In one 18mo. volume, paper, price 25 cents.

BEING PART 10, OF "SMALL BOOKS ON GREAT SUBJECTS"

LAW BOOKS.

SPENCE'S EQUITY JURISDICTION.

THE EQUITABLE JURISDICTION OF THE COURT OF CHANCERY,

COMPRISING

ITS RISE, PROGRESS AND FINAL ESTABLISHMENT.

TO WHICH IS PREFIXED, WITH A VIEW TO THE ELUCIDATION OF THE MAIN SUBJECT, A CONCISE ACCOUNT OF THE LEADING DOCTRINES OF THE COMMON LAW, AND OF THE COURSE OF PROCEDURE IN THE COURTS OF COMMON LAW, WITH REGARD TO CIVIL RIGHTS; WITH AN ATTEMPT TO TRACE THEM TO THEIR SOURCES; AND IN WHICH THE VARIOUS ALTERATIONS MADE BY THE LEGISLATURE DOWN TO THE PRESENT DAY ARE NOTICED.

BY GEORGE SPENCE, ESQ.,

One of her Majesty's Counsel.

IN TWO OCTAVO VOLUMES.

Volume I., embracing the Principles, is now ready. Volume II. is rapidly preparing and will appear early in 1848. It is based upon the work of Mr. Maddock, brought down to the present time, and embracing so much of the practice as counsel are called on to advise upon.

A NEW LAW DICTIONARY,

CONTAINING EXPLANATIONS OF SUCH TECHNICAL TERMS AND PHRASES AS OCCUR IN THE WORKS OF LEGAL AUTHORS, IN THE PRACTICE OF THE COURTS, AND IN THE PARLIAMENTARY PROCEEDINGS OF THE HOUSE OF LORDS AND COMMONS, TO WHICH IS ADDED, AN OUTLINE OF AN ACTION AT LAW AND OF A SUIT IN EQUITY.

BY HENRY JAMES HOLTHOUSE, ESQ.,

Of the Inner Temple, Special Pleader.

EDITED FROM THE SECOND AND ENLARGED LONDON EDITION,

WITH NUMEROUS ADDITIONS,

BY HENRY PENINGTON,

Of the Philadelphia Bar.

In one large volume, royal 12mo., of about 500 pages, double columns, handsomely bound in law sheep.

"This is a considerable improvement upon the former editions, being bound with the usual law binding, and the general execution admirable—the paper excellent, and the printing clear and beautiful. Its peculiar usefulness, however, consists in the valuable additions above referred to, being intelligible and well devised definitions of such phrases and technicalities as are peculiar to the practice in the Courts of this country.—While, therefore, we recommend it especially to the students of law, as a safe guide through the intricacies of their study, it will nevertheless be found a valuable acquisition to the library of the practitioner himself."—*Alex. Gazette.*

"This work is intended rather for the general student, than as a substitute for many abridgments, digests, and dictionaries in use by the professional man. Its object principally is to impress accurately and distinctly upon the mind the meaning of the technical terms of the law, and as such can hardly fail to be generally useful. There is much curious information to be found in it in regard to the peculiarities of the ancient Saxon law. The additions of the American edition give increased value to the work, and evince much accuracy and care."—*Pennsylvania Law Journal.*

TAYLOR'S MEDICAL JURISPRUDENCE.

A PRACTICAL TREATISE ON MEDICAL JURISPRUDENCE.

BY ALFRED S. TAYLOR,

Lecturer on Medical Jurisprudence and Chemistry at Guy's Hospital, London.

With numerous Notes and Additions, and References to American Law,

BY R. E. GRIFFITH, M.D.

In one volume, octavo, neat law sheep.

TAYLOR'S MANUAL OF TOXICOLOGY.

IN ONE NEAT OCTAVO VOLUME.

A NEW WORK, NOW READY.

TRAILL'S

OUTLINES OF A COURSE OF LECTURES ON MEDICAL JURISPRUDENCE.

IN ONE SMALL OCTAVO VOLUME.

LAW BOOKS.

EAST'S REPORTS.

REPORTS OF CASES
ADJUDGED AND DETERMINED IN THE COURT OF KING'S BENCH.

WITH TABLES OF THE NAMES OF THE CASES AND PRINCIPAL MATTERS.

BY EDWARD HYDE EAST, ESQ.,
Of the Inner Temple, Barrister at Law.

EDITED, WITH NOTES AND REFERENCES,

BY G. M. WHARTON, ESQ.,
Of the Philadelphia Bar.

In eight large royal octavo volumes, bound in best law sheep, raised bands and double titles. Price, to subscribers, only twenty-five dollars.

In this edition of East, the sixteen volumes of the former edition have been compressed into eight—two volumes in one throughout—but nothing has been omitted; the entire work will be found, with the notes of Mr. Wharton added to those of Mr. Day. The great reduction of price, (from $72, the price of the last edition, to $25, the subscription price of this,) together with the improvement in appearance, will, it is trusted, procure for it a ready sale.

A NEW WORK ON COURTS-MARTIAL.

A TREATISE ON AMERICAN MILITARY LAW,
AND THE
PRACTICE OF COURTS-MARTIAL,
WITH SUGGESTIONS FOR THEIR IMPROVEMENT.

BY JOHN O'BRIEN,
LIEUTENANT UNITED STATES ARTILLERY.

In one octavo volume, extra cloth, or law sheep.

"This work stands relatively to American Military Law in the same position that Blackstone's Commentaries stand to Common Law."—*U. S. Gazette.*

CAMPBELL'S LORD CHANCELLORS.

LIVES OF THE LORD CHANCELLORS AND KEEPERS OF THE GREAT SEAL OF ENGLAND,

FROM THE EARLIEST TIMES TO THE REIGN OF KING GEORGE IV.,

BY JOHN LORD CAMPBELL, A.M., F.R.S.E.

FIRST SERIES,
In three neat demy octavo volumes, extra cloth,
BRINGING THE WORK TO THE TIME OF JAMES II., JUST ISSUED.

PREPARING,
SECOND SERIES,
In four volumes, to match,
CONTAINING FROM JAMES II. TO GEORGE IV.

YOUATT AND SKINNER'S

STANDARD WORK ON THE HORSE.

THE HORSE.

BY WILLIAM YOUATT.

A NEW EDITION, WITH NUMEROUS ILLUSTRATIONS.

TOGETHER WITH A

GENERAL HISTORY OF THE HORSE;

A DISSERTATION ON

THE AMERICAN TROTTING HORSE;

HOW TRAINED AND JOCKEYED.

AN ACCOUNT OF HIS REMARKABLE PERFORMANCES;

AND

AN ESSAY ON THE ASS AND THE MULE,

BY J. S. SKINNER,

Assistant Post-Master-General, and Editor of the Turf Register.

This edition of Youatt's well-known and standard work on the Management, Diseases, and Treatment of the Horse, has already obtained such a wide circulation throughout the country, that the Publishers need say nothing to attract to it the attention and confidence of all who keep Horses or are interested in their improvement.

"In introducing this very neat edition of Youatt's well-known book, on 'The Horse,' to our readers, it is not necessary, even if we had time, to say anything to convince them of its worth; it has been highly spoken of, by those most capable of appreciating its merits, and its appearance under the patronage of the 'Society for the Diffusion of Useful Knowledge,' with Lord Brougham at its head, affords a full guaranty for its high character. The book is a very valuable one, and we endorse the recommendation of the editor, that every man who owns the 'hair of a horse,' should have it at his elbow, to be consulted like a family physician, 'for mitigating the disorders, and prolonging the life of the most interesting and useful of all domestic animals.'"—*Farmer's Cabinet.*

"This celebrated work has been completely revised, and much of it almost entirely re-written by its able author, who, from being a practical veterinary surgeon, and withal a great lover and excellent judge of the animal, is particularly well qualified to write the history of the noblest of quadrupeds. Messrs. Lea and Blanchard of Philadelphia have republished the above work, omitting a few of the first pages, and have supplied their place with matter quite as valuable, and perhaps more interesting to the reader in this country; it being nearly 100 pages of a general history of the horse, a dissertation on the American trotting horse, how trained and jockeyed, an account of his remarkable performances, and an essay on the Ass and Mule, by J. S. Skinner, Esq., Assistant Post-master-General, and late editor of the Turf Register and American Farmer. Mr. Skinner is one of our most pleasing writers, and has been familiar with the subject of the horse from childhood, and we need not add that he has acquitted himself well of the task. He also takes up the important subject, to the American breeder, of the Ass, and the Mule. This he treats at length and *con amore*. The Philadelphia edition of the Horse is a handsome octavo, with numerous wood-cuts."—*American Agriculturist.*

YOUATT ON THE PIG.

THE PIG;

A TREATISE ON THE BREEDS, MANAGEMENT, FEEDING, AND MEDICAL TREATMENT OF SWINE,

WITH DIRECTIONS FOR SALTING PORK, AND CURING BACON AND HAMS.

BY WILLIAM YOUATT, V.S.

Author of "The Horse," "The Dog," "Cattle," "Sheep," &c., &c.

ILLUSTRATED WITH ENGRAVINGS DRAWN FROM LIFE BY WILLIAM HARVEY.

In one handsome duodecimo volume, extra cloth, or in neat paper cover, price 50 cents.

This work, on a subject comparatively neglected, must prove of much use to farmers, especially in this country, where the Pig is an animal of more importance than elsewhere. No work has hitherto appeared treating fully of the various breeds of swine, their diseases and cure, breeding, fattening, &c., and the preparation of bacon, salt pork, hams, &c., while the name of the author of "The Horse," "The Cattle Doctor," &c., is sufficient authority for all he may state. To render it more accessible to those whom it particularly interests, the publishers have prepared copies in neat illustrated paper covers, suitable for transmission by mail; and which will be sent through the post-office on the receipt of fifty cents, free of postage.

CLATER AND YOUATT'S CATTLE DOCTOR.

EVERY MAN HIS OWN CATTLE DOCTOR:

CONTAINING THE CAUSES, SYMPTOMS AND TREATMENT OF ALL DISEASES INCIDENT TO OXEN, SHEEP AND SWINE;

AND A SKETCH OF THE

ANATOMY AND PHYSIOLOGY OF NEAT CATTLE.

BY FRANCIS CLATER.

EDITED, REVISED AND ALMOST RE-WRITTEN, BY

WILLIAM YOUATT, AUTHOR OF "THE HORSE."

WITH NUMEROUS ADDITIONS,

EMBRACING AN ESSAY ON THE USE OF OXEN AND THE IMPROVEMENT IN THE BREED OF SHEEP,

BY J. S. SKINNER.

WITH NUMEROUS CUTS AND ILLUSTRATIONS.

In one 12mo. volume, cloth.

"As its title would import, it is a most valuable work, and should be in the hands of every American farmer; and we feel proud in saying, that the value of the work has been greatly enhanced by the contributions of Mr. Skinner. Clater and Youatt are names treasured by the farming communities of Europe as household-gods; nor does that of Skinner deserve to be less esteemed in America."—*American Farmer.*

CLATER'S FARRIER.

EVERY MAN HIS OWN FARRIER:

CONTAINING THE CAUSES, SYMPTOMS, AND MOST APPROVED METHODS OF CURE OF THE DISEASES OF HORSES.

BY FRANCIS CLATER,

Author of "Every Man his own Cattle Doctor,"

AND HIS SON, JOHN CLATER.

FIRST AMERICAN FROM THE TWENTY-EIGHTH LONDON EDITION.

WITH NOTES AND ADDITIONS,

BY J. S. SKINNER.

In one 12mo. volume, cloth.

HAWKER AND PORTER ON SHOOTING.

INSTRUCTIONS TO YOUNG SPORTSMEN IN ALL THAT RELATES TO GUNS AND SHOOTING.

BY LIEUT. COL. P. HAWKER.

FROM THE ENLARGED AND IMPROVED NINTH LONDON EDITION,

TO WHICH IS ADDED THE HUNTING AND SHOOTING OF NORTH AMERICA, WITH DESCRIPTIONS OF ANIMALS AND BIRDS, CAREFULLY COLLATED FROM AUTHENTIC SOURCES.

BY W. T. PORTER, ESQ.

EDITOR OF THE N. Y. SPIRIT OF THE TIMES.

In one large octavo volume, rich extra cloth, with numerous Illustrations.

"Here is a *book*, a hand-book, or rather a text-book—one that contains the whole routine of the science. It is the Primer, the Lexicon, and the Homer. Everything is here, from the minutest portion of a gun-lock, to a dead Buffalo. The sportsman who reads this book understandingly, may pass an examination. He will know the science, and may give advice to others. Every sportsman, and sportsmen are plentiful, should own this work. It should be a "vade mecum." He should be examined on its contents, and estimated by his abilities to answer. We have not been without treatises on the art, but hitherto they have not descended into all the minutiæ of equipments and qualifications to proceed to the completion. This work supplies deficiencies, and completes the sportsman's library."—*U. S. Gazette.*

"No man in the country that we wot of is so well calculated as our friend of the 'Spirit' for the task he has undertaken, and the result of his labours has been that he has turned out a work which should be in the hands of every man in the land who owns a double-barrelled gun."—*N. O. Picayune.*

"A volume splendidly printed and bound, and embellished with numerous beautiful engravings, which will doubtless be in great demand. No sportsman, indeed, ought to be without it, while the general reader will find in its pages a fund of curious and useful information."—*Richmond Whig.*

YOUATT ON THE DOG.

THE DOG,

BY WILLIAM YOUATT,

Author of "The Horse," &c.

WITH NUMEROUS AND BEAUTIFUL ILLUSTRATIONS.

EDITED BY E. J. LEWIS, M.D. &c. &c.

In one beautifully printed volume, crown octavo.

LIST OF PLATES.

Head of Bloodhound—Ancient Greyhounds—The Thibet Dog—The Dingo, or New Holland Dog—The Danish or Dalmatian Dog—The Hare Indian Dog—The Greyhound—The Grecian Greyhound—Blenheims and Cockers—The Water Spaniel—The Poodle—The Alpine Spaniel or Bernardine Dog—The Newfoundland Dog—The Esquimaux Dog—The English Sheep Dog—The Scotch Sheep Dog—The Beagle—The Harrier—The Foxhound—Plan of Goodwood Kennel—The Southern Hound—The Setter—The Pointer—The Bull Dog—The Mastiff—The Terrier—Skeleton of the Dog—Teeth of the Dog at seven different ages.

"Mr. Youatt's work is invaluable to the student of canine history; it is full of entertaining and instructive matter for the general reader. To the sportsman it commends itself by the large amount of useful information in reference to his peculiar pursuits which it embodies—information which he cannot find elsewhere in so convenient and accessible a form, and with so reliable an authority to entitle it to his consideration. The modest preface which Dr. Lewis has made to the American edition of this work scarcely does justice to the additional value he has imparted to it; and the publishers are entitled to great credit for the handsome manner in which they have got it up."—*North American.*

THE SPORTSMAN'S LIBRARY,

OR HINTS ON HUNTERS, HUNTING, HOUNDS, SHOOTING, GAME, DOGS, GUNS, FISHING, COURSING, &c., &c.

BY JOHN MILLS, ESQ.,

Author of "The Old English Gentleman," &c.

In one well printed royal duodecimo volume, extra cloth.

STABLE TALK AND TABLE TALK,

OR SPECTACLES FOR YOUNG SPORTSMEN.

BY HARRY HIEOVER.

In one very neat duodecimo volume, extra cloth.

"These lively sketches answer to their title very well. Wherever Nimrod is welcome, there should be cordial greeting for Harry Hieover. His book is a very clever one, and contains many instructive hints, as well as much light-hearted reading."—*Examiner.*

THE DOG AND THE SPORTSMAN,

EMBRACING THE USES, BREEDING, TRAINING, DISEASES, ETC., OF DOGS, AND AN ACCOUNT OF THE DIFFERENT KINDS OF GAME, WITH THEIR HABITS.

Also, Hints to Shooters, with various useful Recipes, &c., &c.

BY J. S. SKINNER.

With Plates. In one very neat 12mo. volume, extra cloth.

FRANCATELLI'S MODERN FRENCH COOKERY.

THE MODERN COOK,

A PRACTICAL GUIDE TO THE CULINARY ART, IN ALL ITS BRANCHES, ADAPTED AS WELL FOR THE LARGEST ESTABLISHMENTS AS FOR THE USE OF PRIVATE FAMILIES.

BY CHARLES ELMÈ FRANCATELLI,

Pupil of the celebrated Careme, and late Maitre D'Hotel and Chief Cook to her Majesty the Queen.

In one large octavo volume, extra cloth, with numerous illustrations.

"It appears to be the book of books on cookery, being a most comprehensive treatise on that art preservative and conservative. The work comprises, in one large and elegant octavo volume, 1447 recipes for cooking dishes and desserts, with numerous illustrations; also bills of fare and directions for dinners for every month in the year, for companies of six persons to twenty-eight.—*Nat. Intelligencer.*

"The ladies who read our Magazine, will thank us for calling attention to this great work on the noble science of cooking, in which everybody, who has any taste, feels a deep and abiding interest. Francatelli is the Plato, the Shakspeare, or the Napoleon of his department; or perhaps the La Place, for his performance bears the same relation to ordinary cook books that the Mecanique Celeste does to Daboll's Arithmetic. It is a large octavo, profusely illustrated, and contains everything on the philosophy of making dinners, suppers, etc., that is worth knowing.—*Graham's Magazine.*

MISS ACTON'S COOKERY.

MODERN COOKERY IN ALL ITS BRANCHES,

REDUCED TO A SYSTEM OF EASY PRACTICE, FOR THE USE OF PRIVATE FAMILIES. IN A SERIES OF PRACTICAL RECEIPTS, ALL OF WHICH ARE GIVEN WITH THE MOST MINUTE EXACTNESS.

BY ELIZA ACTON.

WITH NUMEROUS WOOD-CUT ILLUSTRATIONS.

TO WHICH IS ADDED, A TABLE OF WEIGHTS AND MEASURES.

THE WHOLE REVISED AND PREPARED FOR AMERICAN HOUSEKEEPERS.

BY MRS. SARAH J. HALE.

From the Second London Edition. In one large 12mo. volume.

"Miss Eliza Acton may congratulate herself on having composed a work of great utility, and one that is speedily finding its way to every 'dresser' in the kingdom. Her Cookery-book is unquestionably the most valuable compendium of the art that has yet been published. It strongly inculcates economical principles, and points out how good things may be concocted without that reckless extravagance which good cooks have been wont to imagine the best evidence they can give of skill in their profession."—*London Morning Post.*

THE COMPLETE COOK.

PLAIN AND PRACTICAL DIRECTIONS FOR COOKING AND HOUSEKEEPING,

WITH UPWARDS OF SEVEN HUNDRED RECEIPTS,

Consisting of Directions for the Choice of Meat and Poultry, Preparations for Cooking; Making of Broths and Soups; Boiling, Roasting, Baking and Frying of Meats, Fish, &c.; Seasonings, Colorings, Cooking Vegetables; Preparing Salads; Clarifying; Making of Pastry, Puddings, Gruels, Gravies, Garnishes, &c., &c., and with general Directions for making Wines.

WITH ADDITIONS AND ALTERATIONS.

BY PARKINSON,

PRACTICAL CONFECTIONER, CHESTNUT STREET.

In one small volume, paper. Price only Twenty-five Cents.

SMALL BOOKS ON GREAT SUBJECTS.

A SERIES OF WORKS

WHICH DESERVE THE ATTENTION OF THE PUBLIC, FROM THE VARIETY AND IMPORTANCE OF THEIR SUBJECTS, AND THE CONCISENESS AND STRENGTH WITH WHICH THEY ARE WRITTEN.

They form a neat 18mo. series, in paper, or strongly done up in three neat volumes, extra cloth.

THERE ARE ALREADY PUBLISHED,

No. 1.—PHILOSOPHICAL THEORIES AND PHILOSOPHICAL EXPERIENCE.
2.—ON THE CONNEXION BETWEEN PHYSIOLOGY AND INTELLECTUAL SCIENCE.
3.—ON MAN'S POWER OVER HIMSELF, TO PREVENT OR CONTROL INSANITY.
4.—AN INTRODUCTION TO PRACTICAL ORGANIC CHEMISTRY, WITH REFERENCES TO THE WORKS OF DAVY, BRANDE, LIEBIG, &c.
5.—A BRIEF VIEW OF GREEK PHILOSOPHY UP TO THE AGE OF PERICLES.
6.—GREEK PHILOSOPHY FROM THE AGE OF SOCRATES TO THE COMING OF CHRIST.
7.—CHRISTIAN DOCTRINE AND PRACTICE IN THE SECOND CENTURY.
8.—AN EXPOSITION OF VULGAR AND COMMON ERRORS, ADAPTED TO THE YEAR OF GRACE MDCCCXLV.
9.—AN INTRODUCTION TO VEGETABLE PHYSIOLOGY, WITH REFERENCES TO THE WORKS OF DE CANDOLLE, LINDLEY, &c.
10.—ON THE PRINCIPLES OF CRIMINAL LAW.
11.—CHRISTIAN SECTS IN THE NINETEENTH CENTURY.
12.—THE GENERAL PRINCIPLES OF GRAMMAR.

"We are glad to find that Messrs. Lea & Blanchard are reprinting, for a quarter of their original price, this admirable series of little books, which have justly attracted so much attention in Great Britain."—*Graham's Magazine.*

"The writers of these thoughtful treatises are not labourers for hire; they are men who have stood apart from the throng, and marked the movements of the crowd, the tendencies of society, its evils and its errors, and, meditating upon them, have given their thoughts to the thoughtful."—*London Critic.*

"A series of little volumes, whose worth is not at all to be estimated by their size or price. They are written in England by scholars of eminent ability, whose design is to call the attention of the public to various important topics, in a novel and accessible mode of publication."—*N. Y. Morning News.*

MACKINTOSH'S DISSERTATION ON THE PROGRESS OF ETHICAL PHILOSOPHY,

WITH A PREFACE BY

THE REV. WILLIAM WHEWELL, M. A.

In one neat 8vo. vol., extra cloth.

OVERLAND JOURNEY ROUND THE WORLD,

DURING THE YEARS 1841 AND 1842,

BY SIR GEORGE SIMPSON,

GOVERNOR-IN-CHIEF OF THE HUDSON'S BAY COMPANY'S TERRITORIES.

In one very neat crown octavo volume, rich extra crimson cloth, or in two parts, paper, price 75 cents each.

"A more valuable or instructive work, or one more full of perilous adventure and heroic enterprise, we have never met with."—*John Bull.*

"It abounds with details of the deepest interest, possesses all the charms of an exciting romance and furnishes an immense mass of valuable information."—*Inquirer.*

UNITED STATES EXPLORING EXPEDITION.

THE NARRATIVE OF THE

UNITED STATES EXPLORING EXPEDITION,

DURING THE YEARS 1838, '39, '40, 41, AND '42.

BY CHARLES WILKES, ESQ., U. S. N.

COMMANDER OF THE EXPEDITION, ETC.

PRICE TWENTY-FIVE DOLLARS.

A New Edition, in Five Medium Octavo Volumes, neat Extra Cloth, particularly done up with reference to strength and continued use: containing TWENTY-SIX HUNDRED PAGES of Letter-press. Illustrated with Maps, and about THREE HUNDRED SPLENDID ENGRAVINGS ON WOOD.

PRICE ONLY TWO DOLLARS A VOLUME.

Though offered at a price so low, this is the complete work, containing all the letter-press of the edition printed for Congress, with some improvements suggested in the course of passing the work again through the press. All of the wood-cut illustrations are retained, and nearly all the maps; the large steel plates of the quarto edition being omitted, and neat wood-cuts substituted for forty-seven steel vignettes. It is printed on fine paper, with large type, bound in very neat extra cloth, and forms a beautiful work, with its very numerous and appropriate embellishments.

The attention of persons forming libraries is especially directed to this work, as presenting the novel and valuable matter accumulated by the Expedition in a cheap, convenient, and readable form.

SCHOOL and other PUBLIC LIBRARIES should not be without it, as embodying the results of the First Scientific Expedition commissioned by our government to explore foreign regions.

"We have no hesitation in saying that it is destined to stand among the most enduring monuments of our national literature. Its contributions not only to every department of science, but every department of history, are immense; and there is not an intelligent man in the community—no matter what may be his taste, or his occupation, but will find something here to enlighten, to gratify, and to profit him."—*Albany Religious Spectator.*

ANOTHER EDITION.

PRICE TWENTY-FIVE DOLLARS.

IN FIVE MAGNIFICENT IMPERIAL OCTAVO VOLUMES:

WITH AN ATLAS OF LARGE AND EXTENDED MAPS.

BEAUTIFULLY DONE UP IN EXTRA CLOTH.

This truly great and National Work is issued in a style of superior magnificence and beauty, containing Sixty-four large and finished Line Engravings, embracing Scenery, Portraits, Manners, Customs, &c., &c. Forty-seven exquisite Steel Vignettes, worked among the letter-press; about Two Hundred and Fifty finely-executed Wood-cut Illustrations, Fourteen large and small Maps and Charts, and nearly Twenty-six Hundred pages of Letter-press.

ALSO, A FEW COPIES STILL ON HAND.

THE EDITION PRINTED FOR CONGRESS,

IN FIVE VOLUMES, AND AN ATLAS.

LARGE IMPERIAL QUARTO, STRONG EXTRA CLOTH.

PRICE SIXTY DOLLARS.

JUST ISSUED,

THE ETHNOGRAPHY AND PHILOLOGY OF THE UNITED STATES EXPLORING EXPEDITION,

UNDER THE COMMAND OF CHARLES WILKES, ESQ., U. S. NAVY.

BY HORATIO HALE,

PHILOLOGIST TO THE EXPEDITION.

In one large imperial octavo volume of nearly seven hundred pages. With two Maps, printed to match the Congress copies of the "Narrative."

Price TEN DOLLARS, in beautiful extra cloth, done up with great strength.

*** This is the only edition printed, and but few are offered for sale.

The remainder of the scientific works of the Expedition are in a state of rapid progress. The volume on Corals, by J. D. Dana, Esq., with an Atlas of Plates, will be shortly ready, to be followed by the others.

DON QUIXOTE—ILLUSTRATED EDITION.

NEARLY READY.

DON QUIXOTE DE LA MANCHA,

TRANSLATED FROM THE SPANISH OF

MIGUEL DE CERVANTES SAAVEDRA

BY CHARLES JARVIS, ESQ.

CAREFULLY REVISED AND CORRECTED, WITH A MEMOIR OF THE AUTHOR AND NOTICE OF HIS WORKS.

WITH NUMEROUS ILLUSTRATIONS,

BY TONY JOHANNOT.

In two beautifully printed volumes, crown octavo, rich extra crimson cloth.

The publishers are happy in presenting to the admirers of Don Quixote an edition of that work in some degree worthy of its reputation and popularity. The want of such a one has long been felt in this country, and in presenting this, they have only to express their hope that it may meet the numerous demands and inquiries. The translation is that by Jarvis, which is acknowledged superior in both force and fidelity to all others. It has in some few instances been slightly altered to adapt it better to modern readers, or occasionally to suit it to the inimitable designs of Tony Johannot. These latter are admitted to be the only successful pictorial exponents of the wit and humor of Cervantes, and a choice selection of them have been engraved in the best manner. A copious memoir of the author and his works has been added by the editor. The volumes are printed in large clear type, on fine paper, and handsomely bound, and the whole is confidently offered as worthy the approbation of all readers of this imperishable romance.

PICCIOLA.

ILLUSTRATED EDITION.

PICCIOLA, THE PRISONER OF FENESTRELLA;

OR, CAPTIVITY CAPTIVE.

BY X. B. SAINTINE.

A NEW EDITION, WITH ILLUSTRATIONS.

In one elegant duodecimo volume, large type, and fine paper; price in fancy covers 50 cents, or in beautiful extra crimson cloth.

"Perhaps the most beautiful and touching work of fiction ever written, with the exception of Undine."—*Atlas.*

"The same publishers have shown their patriotism, common sense, and good taste by putting forth their fourth edition of this work, with a set of very beautiful engraved embellishments. There never was a book which better deserved the compliment. It is one of greatly superior merit to Paul and Virginia, and we believe it is destined to surpass that popular work of St. Pierre in popularity. It is better suited to the advanced ideas of the present age, and possesses peculiar moral charms in which Paul and Virginia is deficient. St. Pierre's work derived its popularity from its bold attack on feudal prejudices; Saintine's strikes deeper, and assails the secret infidelity which is the bane of modern society, in its stronghold. A thousand editions of *Picciola* will not be too many for its merit."—*Lady's Book.*

"This is a little gem of its kind—a beautiful conceit, beautifully unfolded and applied. The style and plot of this truly charming story require no criticism; we will only express the wish that those who rely on works of fiction for their intellectual food, may always find those as pure in language and beautiful in moral as Picciola."—*New York Review.*

"The present edition is got up in beautiful style, with illustrations, and reflects credit upon the publishers. We recommend to those of our readers who were not fortunate enough to meet with Picciola some years ago, when it was first translated, and for a season all the rage, to lose no time in procuring it now—and to those who read it then, but do not possess a copy, to embrace the opportunity of supplying themselves from the present very excellent edition."—*Saturday Evening Post.*

"A new edition of this exquisite story has recently been issued by Messrs. Lea & Blanchard, embellished and illustrated in the most elegant manner. We understand that the work was completely out of print, and a new edition will then be welcomed. It contains a delightful letter from the author, giving a painful insight into the personal history of the characters who figure in the story."—*Evening Bulletin.*

"The most charming work we have read for many a day."—*Richmond Enquirer.*

LOVER'S RORY O'MORE.

RORY O'MORE—A NATIONAL ROMANCE,

BY SAMUEL LOVER.

A new and cheap edition, with Illustrations by the Author. Price only 25 cents.

Also, a beautiful edition in royal 12mo., price 50 cents, to match the following.

"A truly Irish, national, and characteristic story."—*London Literary Gazette.*

"Mr. Lover has here produced his best work of fiction, which will survive when half the Irish sketches with which the literary world teems are forgotten. The interest we take in the varied adventures of Rory is never once suffered to abate. We welcome him with high delight, and part from him with regret."—*London Sun.*

LOVER'S IRISH STORIES.

LEGENDS AND STORIES OF IRELAND,

BY SAMUEL LOVER.

In one very neat 12mo. volume, fine paper, extra cloth or fancy paper, With Illustrations by the Author.

LOVER'S SONGS AND BALLADS,

INCLUDING THOSE OF THE "IRISH EVENINGS."

In one neat 12mo. volume, price 25 cents.

MARSTON,

OR THE MEMOIRS OF A STATESMAN AND SOLDIER.

BY THE REV. GEORGE CROLY,

Author of "Salathiel," "Angel of the World," &c.

In one octavo volume, paper, price fifty cents.

"A work of high character and absorbing interest."—*New Orleans Bee.*

MEDICAL BOOKS.

TO THE MEDICAL PROFESSION.

The following list embraces works on Medical and other Sciences issued by the subscribers. They are to be met with at all the principal bookstores throughout the Union, and will be found as low in price as is consistent with the correctness of their printing, beauty of execution, illustration, and durability of binding. No prices are here mentioned, there being no fixed standard, as it is evident that books cannot be retailed at the same rate in New Orleans or Chicago as in Philadelphia. Any information, however, relative to size, cost, &c., can be had on application, free of postage, to the subscribers, or to any of the medical booksellers throughout the country.

LEA & BLANCHARD, *Philadelphia.*

DICTIONARIES, JOURNALS, &c.

AMERICAN JOURNAL OF THE MEDICAL SCIENCES, quarterly, at $5 a year.

AN ANALYTICAL COMPEND of the various branches of Practical Medicine, Surgery, Anatomy, Midwifery, Diseases of Women and Children, Materia Medica and Therapeutics, Physiology, Chemistry and Pharmacy, by John Neill, M. D., and F. Gurney Smith, M. D., with numerous illustrations (nearly ready).

Forming a neat and uniform Edition of these popular works. Any work sold separately.

ALSO,

A UNIFORM AND CHEAP EDITION OF

DICKENS'S NOVELS AND TALES,

IN THREE LARGE VOLUMES.

THE NOVELS AND TALES OF CHARLES DICKENS,

(BOZ,)

In Three large and beautiful Octavo Volumes, done up in Extra Cloth,

CONTAINING ABOUT TWENTY-TWO HUNDRED AND FIFTY LARGE DOUBLE COLUMNED PAGES.

PRICE FOR THE WHOLE, ONLY THREE DOLLARS AND SEVENTY-FIVE CENTS.

The frequent inquiries for a uniform, compact and good edition of Boz's works, have induced the publishers to prepare one, which they now offer at a price so low that it should command a very extended sale. It is printed on fine white paper, with good type, and forms three large volumes, averaging about seven hundred and fifty pages each, done up in various styles of extra cloth, making a beautiful and portable edition.—Some of the works are illustrated with Wood Engravings.

This Edition comprehends the first seven parts, and will be completed with the issue of the Fourth Volume, on the completion of "Dombey and Son," now in progress of publication, containing that work, the "Christmas Stories," and "Pictures from Italy." Purchasers may thus rely on being able to perfect their sets.

ALSO, AN EDITION PROFUSELY ILLUSTRATED WITH

ONE HUNDRED AND THIRTY-FOUR PLATES, AND ONE HUNDRED AND FORTY WOOD-CUTS.

In Imperial octavo, extra cloth, on fine white paper.

☞ The above are the only Complete and Uniform Editions of Dickens's Works now before the public.

NOW PUBLISHING,

DOMBEY AND SON.

FINE EDITION.

In twenty numbers, price 8 cents each, with two illustrations by Hablot K. Browne in each number.

This is the only edition which presents the plates accompanying the text to which they refer.

COOPER'S LEATHER STOCKING TALES,

In five neat volumes, royal 12mo., extra cloth.

BOY'S TREASURY OF SPORTS.

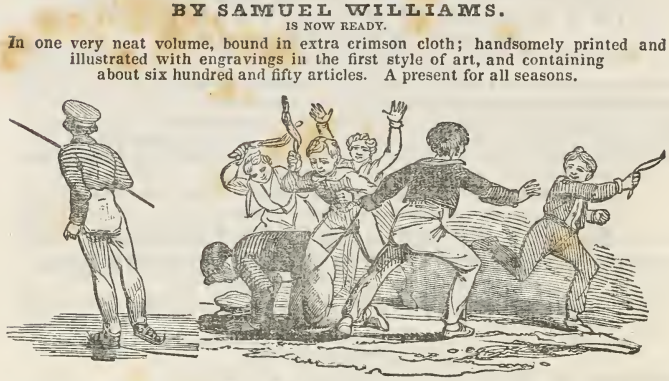
THE BOY'S TREASURY OF SPORTS, PASTIMES AND RECREATIONS.

WITH FOUR HUNDRED ILLUSTRATIONS,

BY SAMUEL WILLIAMS.

IS NOW READY.

In one very neat volume, bound in extra crimson cloth; handsomely printed and illustrated with engravings in the first style of art, and containing about six hundred and fifty articles. A present for all seasons.



PREFACE.

This illustrated Manual of "Sports, Pastimes, and Recreations," has been prepared with especial regard to the Health, Exercise, and Rational Enjoyment of the young readers to whom it is addressed.

Every variety of commendable Recreation will be found in the following pages. First, you have the little Toys of the Nursery; the Tops and Marbles of the Play-ground; and the Balls of the Play-room, or the smooth Lawn.

Then, you have a number of Pastimes that serve to gladden the fireside; to light up many faces right joyfully, and make the parlour re-echo with mirth.

Next, come the Exercising Sports of the Field, the Green, and the Play-ground; followed by the noble and truly English game of Cricket.

Gymnastics are next admitted; then, the delightful recreation of Swimming; and the healthful sport of Skating.

Archery, once the pride of England, is then detailed; and very properly followed by Instructions in the graceful accomplishment of Fencing, and the manly and enlivening exercise of Riding.

Angling, the pastime of childhood, boyhood, manhood, and old age, is next described; and by attention to the instructions here laid down, the lad with a stick and a string may soon become an expert Angler.

Keeping Animals is a favourite pursuit of boyhood. Accordingly, we have described how to rear the Rabbit, the Squirrel, the Dormouse, the Guinea Pig, the Pigeon, and the Silkworm. A long chapter is adapted to the rearing of Song Birds; the several varieties of which, and their respective cages, are next described. And here we may hint, that kindness to Animals invariably denotes an excellent disposition; for, to *pet* a little creature one hour, and to treat it harshly the next, marks a capricious if not a cruel temper. Humanity is a jewel, which every boy should be proud to wear in his breast.

We now approach the more sedate amusements—as Draughts and Chess; two of the noblest exercises of the ingenuity of the human mind. Dominoes and Bagatelle follow. With a knowledge of these four games, who would pass a dull hour in the dreariest day of winter; or who would sit idly by the fire?

Amusements in Arithmetic, harmless Legerdemain, or sleight-of-hand, and Tricks with Cards, will delight many a family circle, when the business of the day is over, and the book is laid aside.

Although the present volume is a book of amusements, Science has not been excluded from its pages. And why should it be? when Science is as entertaining as a fairy tale. The changes we read of in little nursery-books are not more amusing than the changes in Chemistry, Optics, Electricity, Magnetism, &c. By understanding these, you may almost become a little Magician.

Toy Balloons and Paper Fireworks, (or Fireworks *without* Fire,) come next. Then follow Instructions for Modelling in Card-Board; so that you may build for yourself a palace or a carriage, and, in short, make for yourself a little paper world.

Puzzles and Paradoxes, Enigmas and Riddles, and Talking with the Fingers, next make up plenty of exercise for "Guess," and "Guess again." And as you have the "Keys" in your own hand, you may keep your friends in suspense, and make yourself as mysterious as the Sphynx.

A chapter of Miscellanies—useful and amusing secrets—winds up the volume.

The "Treasury" contains upwards of four hundred Engravings; so that it is not only a collection of "secrets worth knowing," but it is a book of pictures, as full of prints as a Christmas pudding is of plums.

It may be as well to mention that the "Treasury" holds many new games that have never before been printed in a book of this kind. The old games have been described afresh. Thus it is, altogether, a new book.

And now we take leave, wishing you many hours, and days, and weeks of enjoyment over these pages; and we hope that you may be as happy as this book is brimful of amusement.

SCHMITZ & ZUMPT'S CLASSICAL SERIES.

VOLUME I.

C. JULII CAESARIS
COMMENTARII DE BELLO GALLICO.

WITH AN INTRODUCTION, NOTES, AND A GEOGRAPHICAL INDEX IN ENGLISH.

ALSO, A MAP OF GAUL, AND ILLUSTRATIVE ENGRAVINGS.

VOLUME VI.—Nearly Ready.

M. TULLI CICERONIS ORATIONES SELECTÆ.

WITH INTRODUCTION, ENGLISH NOTES, &c. &c.

In one handsome 18mo. volume.

VOLUME VII.—Nearly Ready.

INTRODUCTION TO THE LATIN GRAMMAR.

BY LEONARD SCHMITZ, PH. D., F. R. S. E., &c.

In one handsome 18mo. volume.

The neatness, cheapness, and accuracy of this series, together with its skillful adaptation to the wants both of teachers and students, have secured for it the almost universal approbation of those to whom it has been submitted. From among the very numerous testimonials which the publishers have received, they beg to submit the following:—

Schmitz and Zumpt's Classical Series.—Continued.

From Prof. Roche, *Transylvania University, Lexington, Ky., March* 31, 1849.

Whatever influence my position may give me shall be most cheerfully employed in bringing into general use in the West these very valuable works. I trust that you will prosecute to a close the proposed series, and that the execution of those that remain to complete a Latin Curriculum may be as neat and in all respects as unexceptionable as that of those already published.

From Prof. John Wilson, *Prep. Dep. Dickinson College, Carlisle, Dec.* 8, 1848.

I have examined the three volumes with considerable care, and can give them my unqualified approbation. The plan is judicious, and the execution worthy of all praise. The notes comprise all that a student needs, and all that he should have; and their position at the foot of the page is just what it should be.

From Prof. E. E. Wiley, *Emory and Henry College, Va. Nov.* 30, 1848.

From the cursory examination given them, I must say that I have been highly gratified. Such a series as you propose giving to the public is certainly a great desideratum. Our classical text-books have heretofore been rendered entirely too expensive, by the costly dresses in which they have appeared, and by the extensive display of notes appended; many of which, though learned, are of little worth to the student in elucidating the text. It will afford me pleasure to introduce into my department such books of your series as may be in our course.

From S. H. Taylor, Esq., *Andover, Mass., Oct.* 30, 1848.

The notes seem to me very accurate, and are not so numerous as to do for the student what he ought to do for himself. I can with safety, therefore, recommend it to my pupils.

From Prof. M. M. Campbell, *Principal of the Grammar School, Indiana University, Nov.* 6, 1848.

I like the plan of your series. I feel sure it will succeed, and thus displace some of the learned lumber of our schools. The notes, short, plain, and apposite, are placed where they ought to be, and furnish the learner just about help enough.

From Philip Lindsley, D. D., *Pres. of the University of Nashville, Nov.* 27, 1848.

The classical series, edited by Drs. Schmitz and Zumpt, has already acquired a high and well-merited reputation on both sides of the Atlantic. I have carefully examined your editions of Cæsar and Virgil. I think them admirable text-books for schools, and preferable to all others. I shall avail myself of every suitable occasion to recommend them.

From B. Sanford, Esq., *Bridgewater, Mass., Jan.* 17, 1849.

I have examined, with considerable care, both the Cæsar and the Virgil, and am much pleased with the plan and execution of the series thus far. I am particularly gratified with the propriety and judgment displayed by the editors in the preparation of the notes; avoiding, as I think, the prolixity and profuseness of some of our classical works, and, at the same time, the barrenness and deficiency of others; giving a body of annotations better suited to aid the teacher in imparting a knowledge of the language, than is to be found in any edition heretofore in use.

From Prof. Sturgess, *Hanover College, Indiana, Dec.* 30, 1848.

The mere name of the editors is a sufficient and most ample guarantee of the accuracy of the text, the judicious choice of various readings, and the conformity of those adopted to the latest investigations of MSS., and the results of the most enlightened criticism. The notes I have not examined very carefully, except those of the Virgil. They are admirable, extremely condensed, and conveying a great deal of most valuable criticism in the briefest possible way. They are particularly valuable for their æsthetical remarks, and the frequent references to parallel passages in the same author. The preliminary life is excellent, and of great value to the student. The Sallust appears to be of the same general character, and the notes to furnish just such help as the diligent student really needs. I think that in bringing out such a course at a cheap rate you are conferring a great boon on the country, and additional honor on your press, already so distinguished for the *value* of its issues.

HERSCHEL'S OUTLINES OF ASTRONOMY.—*Now Ready.*

OUTLINES OF ASTRONOMY.

BY SIR JOHN F. W. HERSCHEL, F. R. S., &c.

In one neat volume, crown octavo, with six plates and numerous wood-cuts.

With this, we take leave of this remarkable work, which we hold to be, beyond a doubt, the greatest and most remarkable of the works in which the laws of astronomy and the appearance of the heavens are described to those who are not mathematicians nor observers, and recalled to those who are. It is the reward of men who can descend from the advancement of knowledge to care for its diffusion, that their works are essential to all, that they become the manuals of the proficient as well as the text-books of the learner.—*Athenæum.*

Probably no book ever written upon any science has been found to embrace within so small a compass an entire epitome of everything known within all its various departments, practical, theoretical, and physical.—*Examiner.*

A text-book of astronomy, from one of the highest names in the science.—*Silliman's Journal.*

BARON HUMBOLDT'S NEW WORK.—Now Ready.

ASPECTS OF NATURE,

IN DIFFERENT LANDS AND DIFFERENT CLIMATES.

With Scientific Elucidations.

BY ALEXANDER VON HUMBOLDT.

TRANSLATED BY MRS. SABINE.

In one very neat volume, royal 12mo., extra cloth.

It is not without diffidence that I present to the public a series of papers which took their origin in the presence of natural scenes of grandeur or beauty, on the ocean, in the forests of the Orinoco, in the Steppes of Venezuela, and in the mountain wildernesses of Peru and Mexico. Detached fragments were written down on the spot, and at the moment, and afterwards moulded into a whole. The view of nature on an enlarged scale, the display of the concurrent action of various forces or powers, and the renewal of the enjoyment which the immediate prospect of tropical scenery affords to sensitive minds—are the objects which I have proposed to myself.—AUTHOR'S PREFACE.

ZOOLOGICAL RECREATIONS.—Just Issued.

BY W. J. BRODERIP, Esq., F. R. S.

In one neat volume of 376 pages, royal 12mo., extra cloth.

BOWMAN'S PRACTICAL CHEMISTRY.—Just Issued.

INTRODUCTION TO PRACTICAL CHEMISTRY.

INCLUDING ANALYSIS.

By JOHN E. BOWMAN,

Demonstrator of Chemistry, King's College.

In one handsome volume, royal 12mo., of over 300 pages.

WITH NEARLY ONE HUNDRED ENGRAVINGS ON WOOD.

STEINMETZ'S HISTORY OF THE JESUITS.

HISTORY OF THE JESUITS,

FROM THE FOUNDATION OF THEIR SOCIETY TO ITS SUPPRESSION BY POPE CLEMENT XIV.:

Their Missions throughout the World; their Educational System and Literature; with their Revival and Present State.

BY ANDREW STEINMETZ,

Author of "The Novitiate," and "The Jesuit in the Family."

In two handsome crown 8vo. vols. of about four hundred pages each, extra cloth.

KENNEDY'S LIFE OF WIRT.
CHEAPER EDITION, NOW READY.

MEMOIRS OF THE LIFE OF WILLIAM WIRT.

BY JOHN P. KENNEDY.

SECOND EDITION, REVISED.

In two large and handsome 12mo. volumes, with a Portrait and fac-simile of a letter from John Adams.

The whole of Mr. Wirt's Papers, Correspondence, Diaries, &c., having been placed in the hands of Mr. Kennedy, to be used in this work, it will be found to contain much that is new and interesting relative to the political history of the times, as well as to the private life of Mr. Wirt.

One of the most valuable books of the season, and certainly one of the most entertaining works ever published in this country. Mr. Kennedy is admirably qualified for the preparation of such a work, and has evidently had access to a great variety of useful material. The work is one which should be in the hands of every young man in the country. Its intrinsic interest will secure it a very general popularity.—*N. Y. Courier and Enquirer.*

The genius of the author and the popular character of his subject insure an equally interesting and valuable book, which it would be superfluous in us to commend, in any labored terms, to the attention of our readers. It is an indispensable addition to the libraries of all intelligent Americans. It is got up in the best style, with a likeness of Mr. Wirt from a portrait by Charles B. King.—*Philadelphia North American.*

The fascinating letters of Mr. Wirt, one of the most brilliant and agreeable men of the day, in themselves furnish a rich fund of instruction and enjoyment.—*Richmond Inquirer.*

This work has been looked for with much interest by the public, and will not disappoint the high expectations justly based upon the well-known talents of the author, and the abundant materials left by the distinguished orator and jurist, to which he has had free access.—*Baltimore American.*

The style is at once vigorous and fascinating, and the interest of the most absorbing character.—*Philadelphia Inquirer.*

Now Ready.—INGERSOLL'S NEW WORK.

HISTORICAL SKETCH OF THE SECOND WAR
BETWEEN THE UNITED STATES OF AMERICA AND GREAT BRITAIN,

DECLARED BY ACT OF CONGRESS THE 18th OF JUNE, 1812, AND CONCLUDED BY PEACE THE 15th OF FEBRUARY, 1815.

BY CHARLES J. INGERSOLL.

EMBRACING THE EVENTS OF 1814.

In one well-printed 8vo. vol., of 318 pages, double columns, paper covers, price $1 00

FRANCE UNDER LOUIS PHILIPPE.

The History of Ten Years, 1830–1840; or, France under Louis Philippe.

BY LOUIS BLANC,

Secretary of the Provisional Government of 1848.
